CURRICULUM STRUCTURE AND SYLLABUS

Bachelor of Technology in Computer Science and Engineering (Programme Code: 3102)

Batch: 2021-25

Institute of Engineering and Technology

Vision

To be one of India's most innovative higher education institutions.

Mission

To realise its vision, the University will:

Practice teaching that inculcates critical thinking and problem solving,

Pursue research that leads to innovation and enhancement of real-life applications,

Offer experience that leads to all round development, and

Develop a culture that is strongly rooted in interdisciplinarity and learning by building, not just doing.

Values

Caring for people.

Integrity including intellectual honesty, openness, fairness, and trust.

Commitment to excellence.

IQAC Documentation

Document Name: Curriculum Structure and Syllabus Handbook, Bachelor of Technology in Computer Science and Engineering (Programme Code: 3102) - Batch 2021-2025

Document Creation Date: Jan 24, 2022

Document Description: This document supplements the document titled Curriculum Structure: BTech, MTech and BCA Programs and is prepared by the Institute of Engineering and Technology (IET), JKLU to serve as an information baseline for further planning and delivery of courses w.r.t Bachelor of Technology in Computer Science and Engineering (Programme Code: 3102) - Batch 2021-2025.

It includes Program Education Objectives, Programme Outcomes, Programme Specific Outcomes, Desired minimum level of competence for POs and PSOs, Curriculum Structure, collation of Semester wise Course Description, and Course Articulation Matrix (CAM) of each course (including electives and additional courses, if any, opted by students) prepared by respective faculty members. The document àlso includes Programme Articulation Matrix (PAM).

This document is in compliance with BoS (upto 13th meeting) and approvals of the Academic Council (upto 20th meeting).

Document Creation Team:

Dr Sonal Jain

Dr Amit Sinhal

Santosh Verma

Umesh Tripathi

Quality Checked by:

CONTENTS

Program Education Objectives

The B.Tech and M.Tech. Programs at IET, JKLU are designed to prepare students for continued learning and successful careers. Our alumni are expected to:

PEO1: Apply their technical knowledge, complex problem solving and research skills in professional practice.

PEO2: Continue their intellectual development through critical thinking, self-study, apprenticeship, higher education, professional development courses, as well as participation in research groups and professional networks.

PEO3: Serve as ambassadors for engineering and sustainability by exhibiting high professional standards with a deep sense of civic responsibility.

PEO4: Effectively communicate about technical and related issues.

PEO5: Embrace the roles of team members and leaders in their careers.

Program Outcomes

"*Competence is a demonstrated ability to apply knowledge, skills and attributes for achieving desirable results."* The graduates of B.Tech. and M.Tech. Programs at IET, JKLU will have following competencies:

PO 1: Life-long learning*:* Demonstrate inquisitiveness, open mindedness, and the ability to engage in independent and life-long learning in the broadest context of technological, organizational, economic, and societal changes.

PO 2: Citizenship, Sustainability, and Professional ethics

PO 2a: Demonstrate knowledge of constitutional values of liberty, equity, justice, and fraternity with understanding of the impact of the engineering solutions in societal and environmental contexts as well as a sense of responsibility for sustainable development.

PO 2b: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, cultural, and environmental issues and the consequent responsibilities relevant to the professional engineering practice.

PO 2c: Demonstrate commitment for professional integrity and excellence and respect for ethics, responsibilities and norms as prescribed for the engineering practice.

PO 3: Engineering knowledge and Modern tool usage

PO 3a: Demonstrate clear conceptual understanding of fundamentals of engineering specialization and cognitive flexibility to appropriately 'transfer' what has been learned in a context, to different situations.

PO 3b: Apply engineering thinking, computational thinking, and the knowledge of mathematics, natural and social sciences, engineering fundamentals, information technology, engineering specialization, and engineering management to the solution of complex engineering problems.

PO 3c: Create, select, modify, and apply appropriate techniques, best practices, standards, resources, and modern engineering and IT tools including prediction and modelling to engineering and social activities with an understanding of the limitations.

PO 4: Complex problem solving, Design and Research

PO 4a: Identify, formulate, review research literature, and analyze complex engineering problems to arrive at substantiated conclusions using critical thinking along with principles of mathematics, computing, engineering as well as natural and social sciences.

PO 4b: Use systems thinking and reflection to identify and consider underlying structures, patterns, volatility, uncertainties, complexities, ambiguities, complications, and risks to design and develop engineering solutions for complex problems to meet the specified and anticipated needs with appropriate concern for constraints, performance, sustainability, and professional ethics.

PO 4c: Use research-based knowledge and research methods including design of experiments, simulation, analysis and interpretation of data, and synthesis of the information to evaluate and improve the engineering solutions and practice.

PO 5: Individual & team work and Engineering management

PO 5a: Ability to work effectively as an individual and as a team member or leader in diverse and distributed teams, and in multidisciplinary settings.

PO 5b: Ability to apply engineering management principles to one's own and team's work to manage engineering projects and operations and in multidisciplinary environment.

PO 6: Communication: Ability to communicate effectively on complex engineering and technology activities, situations, problems, and solutions using verbal, textual, and pictorial elements with the colleagues, engineering community, users, clients, policy makers, and society at large with intellectual honesty, clarity, empathy, and compassion.

PO 7: Innovation and entrepreneurship:

PO 7a: Demonstrate enthusiasm and understanding to identify opportunities and translate research in engineering and other disciplines to conceive and design innovative engineering solutions for business, industry, and societal problems.

PO 7b: Demonstrate enthusiasm and understanding to conceive and plan technology based new ventures either as independent start-up businesses or within existing corporate structures.

Program Specific Outcome

The Computer Science and Engineering graduates of JKLU will be able to:

CSEPSO1: Conceive, design, implement, and manage computational and information processing systems, agents and processes by using principles of computer science, computer engineering, software engineering, artificial intelligence, data analytics, sustainability and state of the art platforms, components and tools.

CSEPSO2: Serve in ICT areas such as software development, data science, IT infrastructure, cyber security, data administration, system administration in business, consultancy, industry, government, healthcare, etc.

Desired minimum level of competence for POs and PSOs

PO/PSO	Competence Level
PO 1	Competent
PO 2a	Novice
PO 2b	Novice/Advanced Beginner
PO 2c	Novice
PO 3a	Competent
PO 3b	Advanced Beginner
PO 3c	Advanced Beginner
PO 4a	Advanced Beginner
PO 4b	Advanced Beginner
PO 4c	Novice
PO 5a	Advanced Beginner
PO 5b	Advanced Beginner
PO 6	Advanced Beginner
PO 7a	Advanced Beginner
PO 7b	Novice
CSEPSO 1	Competent
CSEPSO 2	Competent

Following process has been adopted to create Course Articulation Matrix (CAM) and Program Articulation Matrix (PAM).

- Course Outcome of each Course is mapped to Program Outcome (PO) / Program Specific Outcome (PSO) using three Levels viz., Low Correlation (1), Moderate Correlation (2) and Substantial Correlation (3).
- Average of these Levels of each Course Outcome w.r.t each specific PO/PSO is calculated and it indicates expectations laid in a course to attain different PO/PSO. In order to avoid over commitment of a course w.r.t its contribution to POs/PSOs, the following validation check is applied on the sum of PO/PSO wise averages in each course.

$$\sum (\text{Average}) <= \text{Min}(\text{Credits} * \text{Year}, 15)$$

  In above equation, Credits are the credits assigned to the course, Year indicates the level of the students from 1st to 4th year. In case this sum exceeds the upper limit, CO-PO mappings are revised. This check ensures that early or low credit courses are not over burdened with very high expectations.
- For creation of Program Articulation Matrix, sum of these averages of different courses w.r.t each PO/PSO is calculated and interpreted as per following Table.

Competence Level *	B.Tech
Novice	<8
Advanced Beginner	8 - 16
Competent	>=16

Novice* (N): Knows objective facts, features, and rules for determining actions w.r.t this PO/PSO without being context-sensitive. The student has studied the basic concepts.

Advanced beginner* (AB): Recognizes common situations w.r.t this PO/PSO that help in recalling which rules should be exercised, starts to recognize and handle situations not covered by given facts, features and rules. The student has problem-solving and repeated practice experience for common situations w.r.t. this PO/PSO.

Competent* (C): Performs most standard actions w.r.t. PO/PSO without conscious application of rules after considering the whole situation. Handles new situations through the appropriate application of rules, can design systems, and may lead. Has demonstrated this PO/PSO through repeated engagements in advanced problem-solving, projects, extensive practice in common and exception situations, and participated in professional networks.

- Minimum required credit – 160
- A student can choose to drop DE/OE and still complete the minimum credit requirement of 160 for completion of B.Tech.
- Credits can vary for specific (*) courses.

List of Electives	
Sem V	
DE-I (Tentative)	**OE-I (Tentative)**
Mobile Application Development- CS1205	Urban and Regional Planning- CE1215
Cryptography - CS1214	Introduction to User-Experience-IL1204
	Idea to Business Model- ED1102
	Energy Management System
	Design and Manufacturing
	Speech Processing
	Numerical Methods: AS1204
Sem VI	
Emerging Tech week (Tentative)	
Robotic Process Automation Lab-CS1125	
Geographical Information Systems Lab-CE1114	**OE-II (Tentative)**
DE-II (Tentative)	Electric Vehicle Technology-EE1220
Cloud Computing Architecture-CS1217	Green Energy- IL1202
Deep Learning-CS1218	Mechatronics-ME1207
Software Engineering-CS1113 (Flexi core)	Disaster Management- CE1206
Compiler Design-CS1112 (Flexi core)	Modern Physics
DE-III (Tentative)	Introduction to Nano Technology
Full Stack Web Development with REACT-CS1212	Introduction to Quantum Computing
Sem VII	
DE-IV, V, VI (Tentative)	**OE-III (Tentative)**
Advanced Data Structures and Algorithms-CS1213	Geographical Information System- CE1214
Blockchain Technology and Application- CS1203	Operations Research- AS1201
Natural Language Processing- CS2203	Fintech in Retail Banking and Insurance-FA1151
Cross-Platform App Development- CS1215	Industrial Safety
Machine Vision- EE1217	Advanced Statistics- AS1202

NOTE:

1. For every credit, in each course, every student is expected to put in a total work of 35-36 hours including the class time. The specified teaching scheme is applicable if the course is taught as full semester course. However, sometimes, a few courses may actually be completed in a shorter duration by increasing the weekly contact hours.
2. Students have the option for earning additional Minor certification in Cyber-Physical Systems (through electives/minor project, 16 Credits) or a Concentration in Data Science, Artificial Intelligence, Embedded Systems and IoT, Software Engineering and Robotic Process Automation, Cloud Computing, Big Data Analytics, Information Security, or Mobile Computing (through electives, 12 credits).
3. Learning outcomes focus on higher order thinking and practical skills. Rote learning is completely de-emphasized and assessment scheme includes several components like assignments, labs, projects, reports etc. The exams are designed to assess problem solving ability through questions focusing on analysis, synthesis, and evaluation.
4. Emerging Tech Week in the VI semester is a slot in which the actual course is decided flexibly. The course has to be in an emerging technology area. Students have the option to replace the course on Emerging Tech Week by a Department elective or Open elective.
5. Relevant engineering standards and sustainability issues are incorporated in all engineering courses.
6. Student can optionally take upto four Independent Study courses with 2 credits each to complete their credit requirement.
7. Students can optionally undergo additional summer internship of 2 credits each after first year and third year to complete their credit requirement.
8. A student may sometimes be allowed to take a few additional courses for earning extra credits, fulfilling credit deficiency or completion of academically equivalent core course requirements in special cases, e.g., lateral entry/transfer cases, semester exchange at partner universities, medical cases, student detention, backlog, etc.

Additional Courses offered for B. Tech students (2021-25)

B. Tech-all branches			
Sem	**Code**	**Course Name**	**Credits**
I	CC1201	Law, Technology and Society*	2
I	ES1201	Creative Engineering*	1
I	CS1216	Web Development*	1
I	IL1205	Introduction to Visual Design*	2

- The courses were conducted for students who got early admission in the program. These credits will count towards the open electives.

- **INDEX OF COURSE DESCRIPTIONS**

Course Title and Code:	**Computational Data Analysis; ES1101**
Hours per Week	L-T-P: 10-2-0
Credits	10
Students who can take	B.Tech Sem I

Course Objective - This course introduces computational analysis of data based on Linear Algebra Principles and Statistics. The computational analysis will include learning and utilizing Python as a programming language.

Course Outcome:

On successful completion of this course, the students should be able to:

ES1101.1 Write Simple Python programs using various datatypes, control structures, decision statements, libraries, functions

ES1101.2 Develop Python programs using Objects, Classes and Files

ES1101.3 Develop Programs for analyzing and interpreting Complex situations in various domains including sustainable development by combining various Linear Algebra, Statistics and Other Problem-Solving Techniques

ES1101.4 Model Complex systems as Linear simultaneous equations and analyze the same using Matrix methods

ES1101.5 Model Data as matrices and Find Eigen Values and Eigen Vectors and Apply the same for problem solving, e.g., ranking and performance analysis

ES1101.6 Summarize and Visualize different datasets

ES1101.7 Analyze and interpret different datasets using Discrete and Continuous Probability Distributions and Apply the same for problem solving, e.g., Goodness of Fit

ES1101.8 Formulate and validate hypothesis with reference to different datasets

ES1101.9 Apply correlation, regression, least square method for modeling, analysis, interpretation and forecasting

Students who can take	**B. Tech Semester-I (Batch: 2021-2025)**

Course Objective:
The students will be trained to analyze an unknown situation through critical thinking and formulate it into a known problem so that solutions can be found. Once solution found, student will be able to use engineering tools to convert a conceptual idea in to a 3D Drawing.

Learning Outcomes:
On successful completion of this course, the students should be able to:

ES1110.1. Approach design challenges from the perspective of the user and offer innovative solutions effectively.
ES1110.2. Communicate and work in team towards a common goal.
ES1110.3. Think creatively towards a desirable solution.
ES1110.4. Develop the projection views of the products with dimensions and scales.
ES1110.5. Create the schematic diagram and isometric view of the parts using software.

Syllabus

Design thinking:

- Various stages of the design process vis a vis problem identifying, framing, empathy-building ideation, prototyping, etc. and exposure to a variety of processes and methodologies applied by design professionals in various relevant contexts.

- understanding the tools of design research methodology through project focused case studies.

Introduction to Engineering Drawing, Orthographic Projections:
Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Scales – Plain and Diagonal Scales. Angle of projection, projection of point, line and plane.

Introduction to Engineering Materials
Introduction to materials- ferrous and non-ferrous materials, aluminum, wood, plastics. Properties of materials- ductility, brittleness, toughness, resilience, hardness, etc. Materials for 3D-printing

Drawing using AutoCAD:
Introduction to AutoCAD, drawing commands, editing commands, annotate commands, layers.

Drafting using AutoCAD:
Layout, view arrangements, dimensioning, annotation, bill of materials.

Students who can take	B. Tech Sem I (All programs)

Course Objective- Automation engineers design, program, simulate and test automated machinery and processes. This course is aimed at building key technical competencies needed by automation engineers. It is focused on basic knowledge and critical understanding of different technologies in the design and maintenance of automation systems.

Course Outcome:

On successful completion of this course, the students should be able to:

ES1111.1 Evaluate and simplify Boolean functions and implement the minimized logic using logic gates.

ES1111.2 Simulate basic combinational and sequential circuits with minimum complexity.

ES1111.3 Model Digital system using Finite State Machine.

ES1111.4 Design circuit using semiconductor devices and passive components.

ES1111.5 Identify the components for use in ac/dc circuits and simulate their electrical response.

ES1111.6 Simulate resonance in series and parallel RLC circuits and tune the frequency and quality of resonance peak.

Students who can take	B. Tech Semester-I (Batch: 2021-2025)

Course Objective: This course aims to develop scientific temper in students and improve their understanding of basic science fundamentals and their applications in industry and research.

Course Outcomes:

After course completion, the student will be able to:

AS1102.1. Distinguish between science, pseudo-science, and other forms of knowledge.

AS1102.2. Distinguish between science, engineering and technology, and also identify the opportunities for integrating these disciplines.

AS1102.3. Use the scientific approach to identify and understand the societal problems.

AS1102.4. Explain, Design, and carry out Scientific studies.

Course Title and Code:	**Fundamentals of Communication; CC1101**
Hours per Week	L-T-P: 2-0-1
Credits	2
Students who can take	B.Tech/BCA Sem I

Course Objective- This course provides an introduction to the importance of effective communication, the consequences of poor communication, and the different elements of verbal and non-verbal communication. Students learn about, and enhance, the components of communication: kinesics, paralanguage (voice) and language.

Course Outcome:

On successful completion of this course, the students should be able to:

CC1101.1 Identify different cultural differences and their impact on communication.

CC1101.2 Compose grammatically correct sentences and paragraphs.

CC1101.3 Deliver effective oral presentations following appropriate kinesics and paralinguistic features.

CC1101.4 Identify impact of cultural differences on communication.

CC1101.5 Apply appropriate communication skills across settings, purposes, and audiences.

Course Title and Code	Calculus and Applied Mechanics ES1103
Hours per Week	**L-T-P: 6-2-0**
Credits	**6**
Students who can take	**B. Tech Semester-II (Compulsory)**

Course Objective:

This course introduces the basic elements of calculus and mechanics through some engineering projects. The application of multivariable calculus in civil and mechanical engineering is also highlighted. This course will equip students with essential domain knowledge of calculus and applied mechanics in solving basic engineering problems.

Course Outcomes:

On successful completion of this course, the student should be able to:

ES1103.1. apply analytical techniques to determine forces in structures
ES1103.2. use commercial software (STAAD Pro.) to simulate a structure/frame and determine force in the members
ES1103.3. model physical phenomena using calculus and solve using appropriate method
ES1103.4. apply Newton's laws of motion and understand the concepts of dynamics concepts (force, momentum, work and energy)
ES1103.5. interpret the geometrical significance of differential and integral calculus
ES1103.6. solve problems of vector differentiation and integration
ES1103.7. calculate the buoyant forces of objects with various shape and carryout the stability analysis
ES1103.8. apply the concept of partial differentiation to solve optimization problems

Syllabus:

Vectors Algebra: basics of vector algebra, resultant vector, Application of vector equilibrium on structures.

Force systems basic concepts, equilibrium of system of forces, free body diagrams, equations of equilibrium of coplanar systems, structures (trusses), analysis of structures, method of joints, method of section, friction, virtual work, work energy principle, impulse-momentum (linear, angular).

Function of several variables, functions of one and several variables, partial differentiation, maxima-minima.
Vector Differentiation: Vector functions and derivatives, Arc length and unit tangent vector, Curvature and unit normal vector, Directional derivative and gradient vectors, Tangent plane, Divergence and curl of a vector field
Integral Calculus, area under curve, arc length, double integral, change of order and triple integrals, surface and volume integrals, solids of revolution, moment of inertia, floatation, buoyancy, centroid
Vector Integration: Line integral, flux, work done, circulation, path independence, potential function and conservative fields, Surface area and surface integral, Green's theorem in the plane, Stoke's theorem, Divergence theorem.

Students who can take	**B. Tech Semester-II (Batch: 2021-2025)**

Objective: Students will be trained to work with various design and fabrication processes to shape materials and will be able to assemble the desired functional prototypes.

Course Outcomes:
On successful completion of this course, the students should be able to:

ES1112.1. Develop 3D model of the product using CAD (Computer Aided Drafting) software.
ES1112.2. Identify various hand tools used for fabrication work.
ES1112.3. Identify various machine tools used for fabrication work.
ES1112.4. Select various tools and processes for manufacturing any desired component.

Syllabus

3D Modelling (Software OnShape):

Introduction to software OnShape, 2D drawing commands, 3DModelling command (extrude, revolve, sweep), Editing, command (hole, draft, fillet, chamfers), Patterns.

3D Assembly (Software OnShape):

Approach of assembly, assembly constraints, mechanisms.

Drafting (Software OnShape/AutoCAD):

Layout, view arrangements, dimensioning, annotation, bill of materials.

Materials:

- Types of materials used for fabrication work and their mechanical properties.
- Engineering uses common metals and their alloys such as mild steel, aluminum, and other alloys.

Introduction to Workshop Practice:

- Workshop layout.
- Importance of various sections/shops of workshop.
- Types of jobs done in each shop.
- General safety rules and work procedure in workshop.

Introduction to Carpentry work:

- Applications and methods of using carpentry tools- saw, planner, chisels, hammers, pallet, marking gauge, vice, try square, rule, etc.
- Types of wood and their applications.
- Demonstration of carpentry operations such as marking, sawing, planning, chiseling, grooving, boring, joining, etc.
- Preparation of wooden joints/ Demonstration.
- Safety precautions.

Introduction to Welding technique:

- Introduction to various welding processes like arc welding, gas welding, soldering, brazing.
- Demonstration of metal joining operations- arc welding, soldering, and brazing.
- Demonstrate gas cutting operation.
- Preparation of metal joints/ Demonstration.
- Safety precautions.

Introduction to Machining:

- Introduction to various machine tools like lathe machine, drilling machine, etc.
- Demonstration of lathe machine tool.
- Demonstration of drilling machine.
- Preparation of specimen on various machine/ Demonstration.
- Safety precautions.

Introduction to Fitting work:

- Introduction to various tools like, work holding tools-bench vise, V-block with clamp and C-clamp.
- Introduction to fitting marking and measuring tools-marking table, surface plate, angle plate, universal scribing block, try-square, scriber, divider, center punch, letter punch, calipers, vernier caliper, etc.
- Introduction to various fitting cutting tools, hacksaw, chisels, twist drill, taps, files, dies, etc.
- Introduction to various other tools like fitting finishing tools-files, reamers, tools-hammer, spanners, screw drivers sliding screw wrench.
- Demonstration of various fitting operations such as chipping, filing, scraping, grinding, sawing, marking, drilling, tapping.
- Preparation of simple product/ Demonstration.
- Safety precautions.

Introduction to 3D Printing

- Introduction to 3D printing machine,
- Introduction to types of materials used for 3D printing.
- Preparation of simple product/Demonstration.
- Safety precautions.

Introduction to Laser Cutting

- Introduction to laser cutting machine,
- Introduction to types of materials used for laser cutting.
- Preparation of simple product/Demonstration.
- Safety precautions.

Credits	**3**
Students who can take	B.Tech Sem II CSE/EEE/ME/CE

Course Objective- This course aims at building key technical competencies needed by automation engineers. It is focused to simulate/implement a complete solution of automation problems including power supply, sensor, actuator, sensitized with energy usage and effects on environment.

Course Outcome:

On successful completion of this course, the students should be able to:

ES1113.1. Analyze electrical circuits using network theorems and measure electrical parameters.

ES1113.2. Use electrical safety practices while working on electrical projects.

ES1113.3. Formulate mathematical models for basic mechanical and electro-mechanical systems

ES1113.4. Develop transfer function and simulate dynamic response of a system for bounded inputs.

ES1113.5. Classify Embedded Systems and enlighten architecture of MSP430.

ES1113.6. Explain different sensors and displays for different applications.

ES1113.7. Develop embedded system for various real time applications.

Course Title and Code: Object Oriented Programming (CS1101)	
Hours per Week	**L-T-P: 1-0-4**
Credits	**3**
Students who can take	B.Tech. II Sem

Course Objective: This course teaches object-oriented programming to those who have learnt basic programming concepts and are ready to learn in-depth programming. It focuses on object-oriented programming using JAVA. The main concepts are Classes, Objects, Data Abstraction, Data Encapsulation, Overloading, Overriding, Polymorphism, Inheritance, Interfaces, Exception Handling, and Database Connectivity. This course also covers basic concepts for software design and reuse.

Learning Outcome:

On successful completion of this course, the students should be able to:

CS1101.1. Develop Java Programs with the concepts of primitive data types, strings and arrays.

CS1101.2. Develop Java Programs using Object Oriented Programming Principles such as Classes, Objects, Data Abstraction, Data Encapsulation, Overloading, Overriding, Polymorphism, Inheritance, and Interfaces.

CS1101.3. Design, develop and debug programs in Core Java using coding and documentation standards.

CS1101.4. Incorporate exception handling in Java Programs.

CS1101.5. Use JDBC API connectivity in between Java Programs and database.

Course Contents:

Basics of Java & Decision Statements - Introduction to Java: Features of Java, Byte Code and JVM, JDK, JRE; Data types and Operators: Lexical Tokens, Identifiers, Keywords, Literals, Comments, Primitive Datatypes, ADT, Operator types and precedence, Statements and Flow Control: Conditional statements, looping, return, etc., Abstract data types and their specification. How to implement an ADT. Concrete state space, concrete invariant, abstraction function.

Control Structures, Methods & Constructors - Object Oriented Programming in Java: Object Life-time & Garbage Collection.

Methods & Constructors - Constructor & initialization code block, Parameterized Constructor, Loops, Methods.
Array & String - Defining an Array, Initializing & Accessing Array, Multi –Dimensional Array, Operation on String, Mutable & Immutable String, Collection Bases Loop for String, tokenizing a String, Creating Strings using StringBuffer.
OOP's Concept I - Class Fundamentals, Object & Object reference, Access Control, Modifiers, Methods in Java: Method Declarations, Method Signatures, Invoking Methods,

OOP's Concept II - Static vs. Instance Data Fields, Static vs. Instance Methods, Method Overloading, Encapsulation.
Inheritance, Composition, and Aggregation, Invoking Base Class Constructors, Overriding vs. Overloading, Polymorphism Overloading.
Interfaces - Inner Class & Anonymous Classes, Abstract Class, Interfaces.
Exception Handling - Introduction to Exception handling.

JDBC Programming - The JDBC Connectivity Model, Database Programming: Connecting to the Database, Creating a SQL Query, Getting the Results, and Updating Database Data.
NOTE: Integrated Development Environments (IDEs) to be used in this Course are Eclipse or NetBeans – Both are compatible for Object Oriented Programming using Java.

Course Title and Code : Experimental Science: AS1101	
Hours per Week	**L-T-P: 1-0-4**
Credits	**3**

Course Objectives:

This course is designed to familiarize the student with the fundamental concepts of different phenomenon related with optics, electrical & electronics, modern physics, properties of water and lubricants. This course will expose the students with experimental methods of physics, chemistry and integrates theoretical knowledge and concepts to practical experience.

Course Outcome:

On successful completion of this course, the students will be able to:

AS1101.1. analyze ferromagnetic properties of any magnetic material and differentiate Soft and hard materials.

AS1101.2. analyze thermoelectric effect of metal junctions due to temperature differences.

AS1101.3. analyze nuclear radiation with respect to distance and thickness of absorbing media.

AS1101.4. measure electrical properties e.g. specific resistance, time constant of various electrical components.

AS1101.5. apply Schroedinger equation and quantum mechanical approach to analyze behavior of the quantum particle under different potentials.

AS1101.6. determine the hardness of various water samples. And differentiate the hard and soft water.

AS1101.7. analyze conductivity of different water samples by volumetric titrations and conductometric methods.

AS1101.8. determine different properties of the lubricant/oil samples by Pensky-Martens and Red Viscometer instruments.

Course Syllabi (Theory):

Unit-1: Present Energy resources in India and its sustainability, Energy Demand Scenario in India-Advantage and Disadvantage of conventional Power Plants – Conventional vs Non-conventional power generation.

Unit-2: Basics of Solar Energy, Wind energy- Environmental benefits and impacts, Biomass resources-Bioenergy, Geothermal Energy.

Unit-3: Understanding environment, global crisis, Basic Concepts Forest and Grassland ecosystems, Desert Ecosystems, Aquatic Ecosystems Introduction to Biodiversity, Biodiversity Conservation.

Unit-4: Air pollution- Sources, effects, control, air quality standards, air pollution act, air pollution measurement.Greenhouse gases – effect, Global Warming, Acid Rain, and Ozone Depletion, Water pollution-Sources and impacts, Noise pollution, Soil pollution, Pollution aspects of various power plants.

Course Title and Code: Critical Thinking & Storytelling; CC1102	
Hours per Week	**L-T-P: 2-0-1**
Credits	**2**
Students who can take	B.Tech and BCA | Semester- II

Course Objectives: The modern world offers confounding opinions and choices that need to be navigated judiciously. This course explores frameworks and processes to critically examine narratives, reconstruct them, and craft well-reasoned stories that can be told using impactful communication.

Learning Outcome:

On successful completion of this course, the students should be able to:

CC1102.1 Formulate intelligent questions to investigate.
CC1102.2 Evaluate information and argument for correctness, consistency, relevance and validity.
CC1102.3 Compose well-structured and well-reasoned arguments.
CC1102.4 Articulate and evaluate the impact of narratives.
CC1102.5 Distinguish between facts, assumptions and opinion.

Syllabus

UNIT I: Introduction to Critical Thinking- Definitions of Critical Thinking, its applications and the methods to think critically. Paul & Elder model will be used.

UNIT II: Importance of questioning- The key to critical thinking is the ability to formulate intelligent questions. Students will be able to create, improve and prioritize their questions. They will

be able to use different types of question by using Bloom's taxonomy to understand the root of any situation, problem or subject.

UNIT III: Examine data critically- Students will be able to filter information, separate fact from opinion, identify cognitive biases and become aware of the ladder of inference. They will also be taught to conduct responsible research and basics of bibliography and citation.

UNIT IV: Construct and reconstruct argument- Students will be taught to construct arguments with sound reasoning. They will be able to support their claims and opinions with compelling data and facts, and present well-informed arguments. Evaluate argument using logical fallacies.

UNIT V: Building a compelling narrative- Stories that we create and narrate influence how we see ourselves and our association with others. The students will be able to observe, think, create and narrate their stories in an effective manner.

Students who can take	B.Tech. Semester III (2020-2024) (CSE+EEE)

Course Objective: This course aims to develop understanding for Design, Analysis, and implementation of data structures and algorithms to solve computational problems using an object-oriented programming language. This course builds upon the first-year course on object-oriented programming and lays the foundation for the course on Design and Analysis of Algorithms.

Course Outcome:

On successful completion of this course, the students should be able to:

CS1102.1. Write programs for performing basic operations like insertion, deletion, searching, sorting, merging, traversal etc. on various data structures like array, queue, stack, linked list, tree, graph.

CS1102.2. Use and design appropriate data structures for solving a variety of computational problem.

CS1102.3. Develop test cases for their programs and debug the code.

CS1102.4. Analyze the algorithms in terms of asymptotic time and space complexity.

CS1102.5. Implement and compare various searching and sorting algorithms

CS1102.6. Convert a recursive algorithm to non-recursive algorithm.

1	Theory Exam-III	25
2	Lab Evaluation-II	15
	Total	**40**

Syllabus (Theory)

Unit I: Introduction to linear Data Structures: Types of Data Structures - Linear & Non-Linear Data Structures. Linear Structures: Arrays: Types, Operations and applications (searching sequential and binary, Sorting: bubble, Insertion, Selection, Quick and Merge sorting algorithms for different characteristics of input data. Complexity analysis, Comparison of sorting algorithms in term of complexity-time and space.

Unit II: Stacks and Queues: Operations and Applications, conversion of expression from one form to other form using stack (with & without parenthesis), Evaluation of expression in infix, postfix &

prefix forms using stack, Queues: Operations and Applications, Circular Queues: Operations and Applications, De-queue and Priority queue, Recursion.

Unit III: Linear linked lists: Singly, doubly and circularly connected linear linked lists insertion, deletion at/ from beginning and any point in ordered or unordered lists, Application of linked list for polynomial operations, Comparison of arrays and linked lists as data structures. Implementation of stack, and queue, Algorithms for/of insertion, deletion of stack, and queue implemented using linked list data structure.

Unit IV: Trees: Trees definition, characteristics concept of child, sibling, parent child relationship etc., binary tree: different types of binary trees based on distribution of nodes, threaded binary tree and its application, insertion, deletion and traversal of binary trees, constructing binary tree from traversal results, BST tree: Concept of BST, insertion into and deletion from BST, Height balanced tree: AVL and its operations, Application of trees for representation of sets, Splay Tree and its operation.

Unit V: Graphs: Definition, Relation between tree & graph, directed and undirected graph, representation of graphs using adjacency matrix and list, Depth first and breadth first traversal of graphs, finding connected components and minimum spanning tree- Kruskal and Prims, Dijkstra Algorithm.

Indexing and Hashing: Hashing: The symbol table, Hashing Functions, Collision Resolution Techniques.

Syllabus (Lab):

All programs must be written and implemented in JAVA.

Data Structures Lab:

1. Write a program to search an element in the Array using Linear Search.
2. Write a program to implement Binary Search in an Array.
3. Write a program to insert an element in the given Array.
4. Write a program to delete an element in the given Array.
5. Write a program to merge two Arrays into single Array.
6. Write a program to merge two sorted Arrays into one sorted Array.
7. Write a program to search an element in the Array using Iterative and Recursive Binary Search.
8. Write a menu driven program to implement QUEUE using Arrays that performs following operations

(a) INSERT (b) DELETE (c) TRAVERSAL (d) PEEP (e) ISFULL (f) ISEMPTY

9. Write a menu driven program to implement Circular Queue using Arrays that performs following operations.

(a) INSERT (b) DELETE (c) DISPLAY (d) PEEP (e) ISFULL (f) ISEMPTY

Write a menu driven program to implement a program for Stack that performs following operations using Array.

(a)PUSH (b) POP (c) PEEP (d) DISPLAY (e) ISFULL (f) ISEMPTY

10. Write a program to convert infix notation to postfix notation using Stack.
11. Write a program to convert infix notation to prefix notation using Stack.
12. Write a program to evaluate given postfix notation using Stack.
13. Write a menu driven program to implement following operations on the singly Linked List.

a. Insert a node at the front of the Linked List.
b. Insert a node at the end of the Linked List.
c. Insert a node such that Linked List is in ascending order. (According to info. Field)
d. Delete a first node of the Linked List.
e. Delete a node before specified position.
f. Delete a node after specified position.
g. Traversal of Linked List

14. Write a menu driven program to implement Stack using Linked List.
15. Write a menu driven program to implement Queue using Linked List.
16. Write a program to implement following operations on the doubly Linked List.

a. Insert a node at the front of the Linked List.
b. Insert a node at the end of the Linked List.

c. Delete a last node of the Linked List.
d. Delete a node before specified position.
e. Traversal of Linked List
17. Write a program to implement following operations on the circular Linked List.
a. Insert a node at the end of the Linked List.
b. Insert a node before specified position.
c. Delete a first node of the Linked List.
d. Delete a node after specified position.
e. Traversal of Linked List
18. Write a program which create Binary Tree.
19. Write a program to implement recursive and non-recursive Binary Tree traversing methods in-order, pre-order and post-order traversal.
20. Write a menu driven program to implement Binary Search Tree and its Traversal.
21. Write a menu driven program to implement AVL Tree and its Traversal.
22. Write a program to implement Breadth First Search in a given Graph.
23. Write a program to implement Depth First Search in a given Graph.
24. Write a program to check whether the given Graph is cyclic or not.
25. Write a program to implement Kruskal's Algorithm for the given Graph.
26. Write a program to implement Prim's Algorithm for the given Graph.
27. Write a program to implement Dijkstra's Algorithm for the given Graph.
28. Write a program to implement Bubble Sort, Selection sort, Insertion Sort in an Array.
29. Write a program to implement Merge Sort in an Array.
30. Write a program to implement Quick Sort in an Array.

Students who can take	B. Tech Sem III CSE

Course Objective- This course is aimed to develop understanding of concepts such as logic and proof, algebra, language and grammar, finite automata with an emphasis on applications in computer science so as to build mathematical foundation for the courses such as algorithms, artificial intelligence, compiler design, etc.

Course Outcome: On successful completion of this course, the students will be able to:

CS1103.1. Construct and validate simple computing models which play a crucial role in compiler design, algorithms, etc.
CS1103.2. Analyse conceptual models using discrete mathematics in various application areas such as linguistic, business, internet, etc.
CS1103.3. Develop problem solving and critical thinking skills to solve complex computing problems
CS1103.4. Use logic and proof in order to read, comprehend and construct mathematical arguments
CS1103.5. Develop mathematical models of computation and describe how they relate to formal languages
CS1103.6. Relate the basic difference between deterministic and nondeterministic computing machines
CS1103.7. Apply Turing Machine for development of computational model.

Course Objective

This course introduces the concepts of Ordinary Differential Equations (ODE), Functions of Complex variables and Laplace transform in the context of engineering applications. Civil, mechanical & electrical systems will be modeled and analyzed w.r.t forces and stability. Appropriate numerical methods and simulation tools will also be used.

Course Outcomes:

On successful completion of this course, the students will be able to:

ES1106.1. Solve ordinary differential equations through various techniques.

ES1106.2. Determine the structural behavior of the body by determining the stresses, strains produced by the application of load.

ES1106.3. Analyze the concept of buckling and be able to solve the problems related to column and struts.

ES1106.4. Model the problems of column and struts mathematically in terms of ordinary differential equations and solve them using the appropriate method.

ES1106.5. Simulate the solutions of the above-mentioned models of columns and struts.

ES1106.6. Analyze a function of complex variables in terms of analyticity, poles and zeroes.

ES1106.7. Find Laplace transform and inverse Laplace transforms of given function and use Laplace transform to solve ordinary differential equations.

ES1106.8. Design and Evaluate the LC, RC & RL Networks using Foster's and Cauer Forms.

ES1106.9. Analyze stability criteria for electrical network using pole zero plot and routhhurwitz polynomials.

ES1106.10. Model and simulate electrical networks using open-source simulator/ Virtual lab.

Syllabus

ODE: Ordinary differential equations of first order and first degree, higher order ODEs with constant coefficients, Differential equation of second order with variable coefficients, Numerical solution of ODEs.

Applications of ODE in structural analysis : column and struts - Definitions, Classifications, Assumptions made in the Euler's Column Theory, Expressions for crippling load of different cases like both the ends are hinged or pinned, one end is fixed and other is free, both ends are fixed, one end is fixed other is hinged, Effective length of column, Slenderness ratio, Crippling stress in terms of Effective length and radius of gyration, limitations of Euler's Formula, Rankine's Formula, Eccentric loading, Johnson's Formula for Columns, both straight line and parabolic formula for columns.

Functions of Complex variables: Complex numbers, complex conjugates, functions of complex variables, real and imaginary parts of a complex function, analytic functions, C-R equations, Poles and zeros of a complex function, Taylor's theorem and Taylor's expansion.

Laplace transform: Basic Laplace transform and inverse Laplace Transforms, solution of ODEs using Laplace transform, solution of system of ODEs using Laplace transform.

Network Functions: Concept of complex frequency, transform independence, network functions of one and two port network, concepts of poles and zeros, properties of driving point and transfer functions, time response stability from pole zero plot, Routh-Hurwitz polynomials.

Network Synthesis: Positive real functions, Basic syntheses procedure, method of syntheses, driving point syntheses of one port network (R-L and R-C and R-L-C).

Transient Analysis: Modeling of Mechanical, electrical and heating systems, equivalent circuits of R, L and C elements. Complete response of RL, RC, and RLC circuits to step, sinusoidal, exponential, ramp, impulses and the combinations of excitations. Initial value and final value theorem.

Course Objectives:

The aim of this course is to impart the knowledge of mechanical and electrical machine used in industries. Students will learn the fundamental of engineering principles governing the engineering process in real-world. Students will get the knowledge of sensors, actuators and their selection process for any industrial application. This course complements the first-year course Fundamentals of Automation Engineering to lay the foundation for further courses in IoT areas.

Course Outcomes:

On successful completion of this course, the students be able to:

ES1107.1 Evaluate suitable electrical and non-electrical instruments for measuring physical quantities.

ES1107.2 Explain and Analyze the working of some important mechanical and electrical machine.

ES1107.3 Integrate the sensors for monitoring and automation of electrical and mechanical systems.

ES1107.4 Use electro-mechanical machines for different applications.

Syllabus (Theory):

Unit-I: Measurement, Instrumentation and Calibration

Introduction, measuring units, elements of measurng systems, applications of measurement and instrumentation, instruments types and performance characteristics, error in

measurements, calibration and standards, Measuring instruments, Digital meters, Bridges, Electronic Instruments.

Unit-II: Transducers

Classification of transducers, Selection of transducers, measurement of physical quantities, Elements of data acquisition system, Smart sensors, Introduction to MEMS.

Unit-III: Transformers

Construction, principle of operation, equivalent circuit, losses, testing, efficiency and voltage regulation, auto transformer, three phase connections, parallel operation of transformers, tap changing.

Unit-IV: Rotating Machines

DC Machines

Construction, EMF and torque equation, circuit model, characteristics of generators, characteristics of motors, starting and speed control.

Induction Motors: Construction, working principle, classification and applications, equivalent circuit, starting and Speed control of induction motors.

Unit-V: Mechanical Machines

Turbines: Introduction to steam turbines, Impulse and Reaction turbines, turbine power and related calculations.

Pumps: Introduction of pumps, centrifugal pumps, working of centrifugal pumps, Cavitation and its effect on pump, working of reciprocating pumps, Application of pumps in industries.

Power Transmission Systems: Mechanical drives and their performance analysis.

List of Experiments:

Measurement

1. To study the data sheet and recognise the static characteristics.
2. To study the appliances standards in India.
3. Measurement of voltage, current and power in a circuit.
4. Measurement of pressure.
5. Measurement of resistance.
6. Measurement of inductance.
7. Measurement of capacitance.
8. Calibration of single-phase energy meter.
9. Measurement of displacement.
10. Measurement of temperature.
11. Measurement of flow.
12. Measurement of horizontal and vertical angles using Theodolite.

Mechanical Machines

13. To study the performance of turbines used in steam power plant.
14. To study the performance of belt drive system used for power transmission.

Electrical Machines

15. To perform Ratio, Polarity and Load test on a single-phase transformer.
16. To perform open circuit and Short circuit test on a single-phase transformer.
17. Speed control of DC shunt motor.
18. Starting and reversal of 3-phase Induction motor.

Course Title and Code:	**Perspectives on Contemporary Issues - CC1103**
Hours per Week	L-T-P: 2-0-1
Credits	2
Students who can take	B. Tech-BCA Sem III

Course Objective-

In an era of globalization, there is an increasing need for the youth to be able to empathize with others, value diverse perspectives and cultures and understand how events around the world are intertwined. Global issues revolve around social, economic and environmental factors which ultimately add to the interconnectedness of countries. In this course, students will employ key critical thinking concepts to analyze contemporary issues from multiple perspectives. They will explore the impact at micro and macro levels.

Course Outcomes:

On successful completion of this course, the students should be able to:
CC1103.1: Identify different perspectives objectively.
CC1103.2: Explain interconnectedness of the issues and their impact at micro and macro levels.
CC1103.3: Recognize their own beliefs, biases, claims and assumptions.
CC1103.4: Evaluate sources, argue and defend effectively.

Retest

1	**Theory Exam**	30

Syllabus (Theory):

Research, analysis & evaluation of a topic from local, national and global perspectives.

- Globalization

With increasing development throughout the world, the focus of this theme will be on the impact of adopting policy of neoliberalism globally. Changes in India after implementation of new economic policy of 1991.

- Poverty and Inequality

What do you mean by wealth & equality? Is it enough to ascribe monetary values to human lives? Who has benefited from an increased access to resources, labour & capital due to globalisation? Which groups are historically marginalised & suffer from unequal access to opportunities?

- Social justice and human rights

An understanding of the impact of inequality and discrimination, the importance of standing up for our own rights and our responsibility to respect the rights of others.

- Climate Change and Sustainability

Understanding the magnitude of the issue, its impact and future challenges. How we can meet our current needs without diminishing the quality of the environment or reducing the capacity of future generations to meet their own needs.

- Technology

Impact of unprecedented technological growth, challenges and opportunities. Is technocracy a boon or a bane?

Course Title and Code:	Management Perspectives / IL1101
Hours per Week	L-T-P: 2-0-0
Credits	2
Students who can take	B. Tech Sem-III (All branches)

Course Objective- The present course is an introductory and integrative action encapsulated course designed for the engineering students to introduce them to management discipline and the core functional areas contributing to it. This course adopts the integrated problem-oriented approach via the use of cases and simulation. It implies that complex business problems, in the form of cases and simulations require students to understand different dimensions of the problem and come up with holistic solutions. The course will help students to be familiar with trending management issues and at the same time apply the knowledge gained.

Course Outcome:

On successful completion of this course, the students should be able to:

IL1101.1: Comprehend the importance of management and its functional areas in businesses and its interaction with technology.

IL1101.2: Highlight specific external and internal issues impacting businesses.

IL1101.3: Integrate and analyze multiple dimensions of management aspects to solve business problems.

IL1101.4: Evaluate the aspects that management might consider when evaluating technical and engineering projects such as planning and scheduling, personnel management, cost control etc. from a management perspective

Syllabus (Theory):

HR

1. Business organization- Current challenges
2. HR and its growing importance.
3. Overview of people management systems
4. Recent trends shaping HR.

Marketing:

1. Marketing Process

2. Elements of Marketing Mix
3. Segmentation, Targeting and Positioning

Finance and Accounts:

1. Understanding Accounting Terms
2. Overview of Financial Reports, viz., Balance Sheet, Income Statement, Cash Flow Statement
3. Interface of Balance Sheet and Income Statements
4. Types of Costs and assessing and ascertaining Costs
5. Financial Statement Analysis

Course Title and Code: Design and Analysis of Algorithms: CS1105	
Hours per Week	**L-T-P: 3-0-4**
Credits	**4 (CSE)**

Course Objective:

This course introduces an understanding of the design and analysis of algorithms. The course aims to develop a familiarity with important algorithms and data structures and an ability to analyze the asymptotic performance of algorithms. It will equip the students to apply important algorithmic design paradigms and methods of analysis to develop efficient algorithms in common engineering design situations.

Course Outcome:

On successful completion of this course, the students should be able to:

CS1105.1. Analyze the complexity of different algorithms using asymptotic analysis.

CS1105.2. Analyze and select an appropriate data structure for a computing problem.

CS1105.3. Differentiate between different algorithm designs technique: Divide and Conquer Technique, Greedy, Backtracking, and Dynamic Programming. Also, recognize when an algorithmic design situation calls for using these.

CS1105.4. Develop algorithm and programs using Divide and Conquer technique to solve various computing problems, e.g., Sorting, Strassen's matrix multiplication, and Closest pair.

CS1105.5. Develop energy-efficient algorithms and programs using Greedy approach to solve various computing problems, e.g., Minimum Spanning Trees, Shortest Path, Knapsack, Job scheduling, Graph coloring etc.

CS1105.6. Develop algorithms and programs using Backtracking technique to solve various computing problems, e.g., N queen, Hamiltonian Cycle detection, Travelling salesman, and Network flow.

CS1105.7. Develop algorithms and programs using Dynamic Programming technique to solve various computing problems, e.g., Knapsack, Shortest path, Coinage, Matrix Chain Multiplication, Longest common subsequence.

CS1105.8. Apply Query optimization algorithms using Greedy and Dynamic programming approaches.

CS1105.9. Apply various search-based problem-solving methods e.g., Uninformed search (BFS, DFS, DFS with iterative deepening), Heuristics, and Informed search (hill-climbing, generic best-first, A*).

CS1105.10. Evaluate and apply appropriate energy efficient algorithmic design technique for solving complex computing problem.

CS1105.11. Explain the ways to analyze randomized algorithms (expected running time, probability of error).

CS1105.12. Differentiate between P, NP, NP-Complete, and NP-Hard problems.

1	Theory Exam–3	30
	Total (35)	**30**

Syllabus (Theory):

UNIT I: Introduction: Algorithms, Analyzing algorithms, Complexity of algorithms, Growth of functions, Performance measurements, Types of approaches.

UNIT II: Selection sort, Bubble sort, Insertion Sort, Shell sort, Quick sort, Merge sort, Heap sort, sorting in linear time: Radix sort, Counting Sort, Comparison of sorting algorithms, Divide and Conquer with examples such as Sorting, Matrix Multiplication, Convex hull and Searching

UNIT III: Greedy methods with examples such as Optimal Reliability Allocation, Knapsack, Minimum Spanning trees – Prim's and Kruskal's algorithms, Single-source shortest paths - Dijkstra's and Bellman-Ford algorithms.

UNIT IV: Dynamic programming with examples such as Knapsack, all pair shortest paths – Warshal's and Floyd's algorithms, Resource allocation problem, Backtracking, Branch and Bound with examples such as Travelling Salesman Problem.

UNIT V: Selected Topics: String Matching, Huffman Coding, Theory of NP-completeness, Approximation algorithms and Randomized algorithms.

Text Book(s)

3. Berman, Paul. Algorithms. Cengage Learning. 2002
4. Aho, Hopcraft, Ullman, The Design and Analysis of Computer Algorithms. Pearson Education, 2008.

Syllabus (Practical):

1. SEARCHING AND SORTING BASED PROBLEMS

- Implement an algorithm to find an element in a matrix in which each row and each column is sorted.
- Implement an efficient algorithm to find a majority element in an array. A majority element is one whose number of occurrences is more than half the size of the array.
- Given an array [a1 to an] and we must construct another array [b1 to bn] where bi = a1*a2*...*an/ai. You are allowed to use only constant space and the time complexity is O(n). No divisions are allowed
- Implement the following sorting algorithms: Insertion, Selection, Bubble, Count, Shell, Radix

2. DIVIDE AND CONQUER

- Write a program to implement the merge sort using recursive and non-recursive procedures.
- To implement finding greatest common divisor between two positive integers.
- To implement Matrix Multiplication and analyze its time complexity.
- To implement Quick sort on the given list of elements by considering pivot as the median of the 3 values first, middle and last value.

3. GREEDY AND DYNAMIC PROGRAMMING

- To implement Longest Common Subsequence problem and analyze its time complexity.
- To implement minimum spanning tree using Kruskal's and Prim's algorithms.
- To implement Dijkstra's algorithm and analyze its time complexity.
- To implement Job sequencing problem using greedy approach
- To find whether a set of integers can be divided into two subsets such that the sum of elements in each set is equal using dynamic programming.
- To implement 0/1 knapsack using dynamic programming.

4. BACKTRACKING AND BRANCH-BOUND TECHNIQUES

- To implement graph coloring problem using backtracking
- To implement DFS graph search algorithm
- To implement Travelling Salesman problem using backtracking.

5. STRING MATCHING

- To implement naïve String-Matching algorithm.
- To implement Rabin Karp algorithm using.
- To implement Knuth Morris Pratt algorithm and analyze its time complexity.

6. PROBLEM SOLVING BY SEARCH

- To implement uninformed and informed search techniques for problem solving
- To solve 8 puzzle problem
- To solve n-queen problem

Course Title and Code: Database Systems; CS1106	
Hours per Week	**L-T-P: 3-0-2**
Credits	**4**
Students who can take	Sem IV

Course Objective: This course introduces the fundamental concepts of database systems and modelling of real-world problems using ER-model /UML and to convert ER model into relational model. This course helps students to work with Database management system to develop and manage database. This course helps students to implement SQL and to normalize a given database. It also includes transaction management and methods of concurrency control.

Course Outcome:

On successful completion of this course, the students should be able to:

CS1106.1. Outline database system components and their functions

CS1106.2. Model the real-world systems from the given requirements specification using Entity Relationship Diagrams/Unified Modelling Language

CS1106.3. Convert the ER model into a relational logical schema using various mapping algorithms

CS1106.4. Apply SQL commands to define, query and manipulate a relational database

CS1106.5. Normalize a given database up to Boyce Codd Normal Form (BCNF) based on identified keys and functional dependencies

CS1106.6. Determine the transaction atomicity, consistency, isolation, and durability for a given transaction-processing system.

CS1106.7. Determine the deadlock in transaction-processing system. Apply the method of deadlock avoidance and deadlock detection and recovery

CS1106.8. Apply various concurrency control protocol like two phase locking, timestamping and the method of log base recovery in case of failure

Syllabus (Theory)

UNIT I: Basic Concepts: data, database, database systems, database management systems, instance, schema, Database Applications, Purpose and Advantages of Database Management System (over file systems); Dynamic web applications, Database design standards, Web design standards;

View of Data (Data Abstraction, Data Models), Database Languages (DML, DDL), Relational Databases (Tables, DML, DDL), Data Storage and Querying (Components, Storage Manager, Query Processor), Database Architecture, Database User and Administrators

UNIT II: Design Phases, Design Alternatives (Major Pitfalls), Entity Relational Model (Entity Sets, Relationship Sets, Attributes), Constraints (Mapping Cardinalities, Keys, Participation Constraints), Entity Relationship Diagram, Weak Entity Set, Extended E-R features (Generalization, Specialization and Aggregation), E-R Notations, Examples of ERD

U**NIT III:** Features of Good Relational Design, Atomic Domain and First Normal Form, Decomposition Using Functional Dependency (Key and Functional Dependency, BCNF, 2NF, 3NF), Functional Decomposition Theory (Closure Set of Functional Dependency with Armstrong Rules, Canonical Cover and Loseless Decomposition), Dependency Preservation, Comparison of 3NF and BCNF, Decomposition Using Multi-Valued Dependencies (Multi-Valued Dependency and 4 NF);

UNIT IV: Structure of Relational Databases (Basic Structure, Database Schema, Types of Keys), Fundamental Relational Algebra Operations (Select, Project, Union, Set Difference, Cartesian Product and Rename Operator), Additional Relational Algebra Operators (Set Intersection, Natural Join, Division Operator, Assignment Operator), Examples

UNIT V: (Transaction State, Basic Definitions, ACID Property), Implementation of Atomicity and Durability (Shadow Paging Concept), Concurrent Execution (Reasons of Concurrent Execution, Serial and Concurrent Schedule), Serializability (Conflict and View Serializability), Recoverability of Schedules (Recoverable Schedule and Cascade- less Schedule), Lock-based Protocol (Types of Lock and Deadlock Concept), Two-Phase Locking Protocol, Deadlock Handling (Deadlock Prevention Techniques like Wait-Die, Wound-Wait), Recovery of Deadlock (Selection of victim, Rollback, and Starvation), Insert and Delete Operations (Delete, Insertion, Phantom Phenomenon), Transaction Failure, Storage Structure and Transaction Log and Log-Based Recovery (Deferred Database Modification, Immediate Database Modification, Checkpoints).

Syllabus (Practical)

Introduction to SQL, Advantages of using SQL, SQL concepts and tools, The generic SQL Sentence Construct, Create Table, Insertion of Data into tables, Viewing data in the tables, Delete Operations, Update Operations, Modifying the structure of tables, Renaming Tables, Destroying Tables, Examining Objects created by a User, Arithmetic Operators, Logical Operators, Range Searching, Pattern Matching, Column Alias, Aggregate Functions, Scalar Functions, Date Conversion Functions, Data Constraints, Defining integrity constraints in the alter table command, Dropping integrity constraints in the alter table command, Default Value Concept, Grouping Data from tables, Manipulating dates in SQL, Subqueries, Joins, Union, Intersect and Minus Clause, Index, View, Sequence

Course Title and Code: Computer Architecture and Organization: CS1107	
Hours per Week	**L-T-P: 3-0-2**
Credits	**4**
Students who can take	B. Tech. CSE IV

Course Objectives: To study the basic organization and architecture of digital computers (CPU, memory, I/O, software). Discussions will include digital logic and microprogramming. Learners would be able to program to optimize cache hit and estimate cost of different hardware for the number systems. Such knowledge leads to better understanding and utilization of digital computers, and can be used in the design and application of computer systems or as foundation for more advanced computer-related studies.

Course Outcome:

On successful completion of this course, the students should be able to:

CS1107.1. Draw the functional block diagram of single bus architecture of a computer and describe the function of the instruction execution cycle, RTL interpretation of instructions, addressing modes, instruction set.

CS1107.2. Summarize and compare different computer systems.

CS1107.3. Categorize different types of computers based on Instruction set Architecture.

CS1107.4. Develop assembly language programs for multiplication, division, and I/O interface using 8086.

CS1107.5. Given a CPU organization and instruction, design a memory module and analyze its operation by interfacing with the CPU.

CS1107.6. Write a flowchart for Concurrent access to memory and cache coherency in Parallel Processors and describe the process.

CS1107.7. Given a CPU organization, assess its performance, and apply design techniques to enhance performance using pipelining, parallelism and RISC methodology.

CS1107.8. Analyze the performance of pipeline and cache-based systems.

CS1107.9. Design algorithms to optimize hit-rate in cache memory.

CS1107.10. Program and estimate the execution time of arithmetic functions using different number systems.

Course Syllabi (Theory):

Unit I: BASIC STRUCTURE OF COMPUTERS: Functional units, Basic operational concepts, Bus structures, Performance and metrics, Number Systems, Instructions and instruction sequencing, Hardware-Software Interface, x86 Architecture, Instruction set architecture, Addressing modes, RISC, CISC. ALU design, Fixed point and floating-point operations.

Unit II: BASIC PROCESSING UNIT: Fundamental concepts, Execution of a complete instruction, Multiple bus organization, Hardwired control, Micro programmed control, Nano programming.

Unit III: PIPELINING: Basic concepts, Data hazards, Instruction hazards, Influence on instruction sets, Data path and control considerations, Performance considerations, Exception handling.

Unit IV: MEMORY SYSTEM: Basic concepts, Memory Hierarchy, Semiconductor RAM, ROM, Speed, Size and cost, Cache memories, Improving cache performance, Virtual memory, Memory management requirements, Associative memories, Secondary storage devices.

Unit V: I/O ORGANIZATION: Accessing I/O devices, Programmed Input/Output, Interrupts, Direct Memory Access, Buses, Interface circuits, Standard I/O Interfaces (PCI, SCSI, USB), I/O devices and processors.

ES1109	Computational Engineering Analysis – II	3	1	2	0	5

Course Objective: This course introduces the concepts of Partial Differential Equations (PDE), Fourier transform and Z- transform in the context of engineering applications. Mechanical & electrical systems will be modeled and analyzed w.r.t forces and stability. Appropriate numerical methods and simulation tools will also be used.

Course Outcomes:

On successful completion of this course, the students should be able to:

ES1109.1. Solve partial differential equations and boundary value problems through various appropriate techniques.

ES1109.2. Formulate and analyze differential equations especially Navier stokes and energy equations and use numerical methods for solving the same.

ES1109.3. Use Numerical method for solving partial differential equations using finite difference method.

ES1109.4. Compute Fourier transform and inverse Fourier transforms of given functions and use Fourier transform to solve Partial differential equations.

ES1109.5. Find Z-transform and inverse Z-transforms of given functions and use them to analyze control systems.

ES1109.6. Design and analyze various types of filters and attenuators to minimize power losses and improve signal quality.

ES1109.7. Model and simulate electrical networks using open-source simulator/Python package/ Virtual lab

Course Syllabi (Theory):

PDE: Partial Differential Equations of First Order, Variable separable technique for solving PDE. Heat equation, wave equation, Laplace equation

Boundary value problems: Solution of boundary value problems using separation of variables technique. Numerical solution of PDE.

Application of PDE: Momentum and Energy Transport:

The governing equations of fluid dynamics- models of the flow, continuity equation, momentum equation, Energy equation, boundary conditions. Poisouli's flow, Couette flow, steady and unsteady conduction.

Fourier Transforms: Fourier transform and inverse Fourier transform, properties of Fourier transform, Applications in solving Partial differential equations.

Filter Circuits: Types of passive filters, design low-pass, High-pass, Band-pass, Band-reject filters as constant k type, design low-pass, High-pass, Band-pass, Band-reject filters as RC type, Advantages of active filters over passive filters.

Graph Theory: Introduction, Linear graph of a network, Tie-set and cut-set schedule, incidence matrix, cut-set, and tie-set. Graph theory application to a practical radial system.

Z-transform: Introduction, standard z- transform, properties of z – transform, initial and final value theorems, inverse z-transform, applications in control systems.

Credits	**2**
Students who can take	B.Tech/BCA/BBA/B.Des Semester- IV

Course Objectives: This course enables students to explore their identities to mark their distinctive presence in professional spaces. It intends to help them gain an understanding of the basic purpose, benefits, and responsibilities of self-presence, and to begin the process of defining their values, strengths, and goals, which helps them enhancing their employability skills through exposing themselves through various activities.

Course Outcomes:

On successful completion of this course, the students should be able to:

CC1104.1. Analyze their personal identities by identifying their personal attributes, values, strengths and vision statement.

CC1104.2. Articulate their personal statement and use it to craft an influential pitch.

CC1104.3. Express themselves professionally on various social media platforms.

CC1104.4. Write a well-structured professional business document.

Course Topics

Module(s)	Topics to be covered
Identifying Self	Discovering Identities: Words That Describe Me, Your Personal Identity, A Portrait of Yourself, Personal Identity Wheel, Self-Awareness from five aspects that influence our identity - Personal Attributes, Value and Principles, Emotional Awareness, Tendencies and Habit, Needs Assessment.
	Personal Branding: Meaning, Importance and how to create and use it; Identify, Build and Market your brand story.
Persuasive Communication	Personal Brand Statement, Resume, Cover Letter and The Elevator Pitch, Presence in Group Discussion and Personal Interviews
	Online Brand Communications- Creating an online presence for professional branding on social media platforms (LinkedIn, Facebook, Instagram, etc)
	Writing a well-structured and effective business documents (Agenda, Minutes of the meetings (MoM) Emails, Executive Summary)

Referred MOOCs –
Course Name- Introduction to Personal Branding
Course duration - approx. 7 hours
Offered by University of Virginia
https://www.coursera.org/learn/personal-branding

Course Name- Digital Footprint (If I Googled you, what would I find?)
Course duration - approx. 9 hours
Offered by The University of Edinburgh
https://www.coursera.org/learn/digital-footprint

Course Name- High Impact Business Writing
Course duration - approx. 7 hours
Offered by University of California, Irvine
https://www.coursera.org/learn/business-writing

Hours per Week	**LTP: 1 0 2**
Credits	**2**
Students who can take	**2nd Year B. Tech**

Course Objective:
To provide understanding of design process using critical thinking for developing a prototype from idea nucleation to a demonstrable product.

Course Outcome:
On successful completion of this course, the students should be able to:
IL1102.1. Apply the design process for developing a product.
IL1102.2. Apply techniques to demonstrate the conceptual design.
IL1102.3. Critically solve-problems through hands-on and activity-based projects.

Page Break

Course Contents:

Unit 1: Design Process
Introduction to Design Process.
Developing creative thinking and brainstorming from individual level to a team level.
Engineering materials for model making – wire, clay, wood, etc.
Joining and assembly process like Mortise and Tenon, Dowel Joints, etc.

Unit 2: Sketching and Technical Drawing

Hardware and software tools for model making.
Basic drawing and visualization skills including 2D to 3D - Form exploration.
Principles of animation (basic sketching and CAD modeling).

Unit 3: Documentation

Technical aspects of animation and film making (Frame rate, persistence of vision).
Building a Narrative – Start, Middle and End of a story.
Mediums of animation.

Course Title and Code Operating Systems**:** CS1108	
Hours per Week	**L-T-P: 3-0-2**
Credits	**4**
Students who can take	B. Tech-CSE, Sem V

Course Objectives:

The main aim of this course is to develop an understanding of the fundamental concepts and techniques of operating systems.

Course Outcomes:

On successful completion of this course, the students will be able to:

CS1108.1. Use basic LINUX commands: file/directory handling, standard I/O, redirection, pipes and filters.

CS1108.2. Analyze the structure of OS and its interface with hardware.

CS1108.3. Differentiate between different types of operating systems – Multiprogramming systems, Time-sharing systems, Parallel systems, Real-Time systems, Distributed systems and Mobiles systems. Compare Windows, Android and LINUX OS with respect to their key features and functionality.

CS1108.4. Differentiate between various states of process and their representation using process control block (PCB). Analyze data structures used by an OS to manage the processes.

CS1108.5. Implement and Assess the performance of different types of scheduling algorithms.

CS1108.6. Examine process synchronization and Inter process communication- Race condition, semaphores, monitors, inter process communication through message passing.

CS1108.7. Categorize the conditions that cause deadlock in resource allocation. Implement deadlock handling strategies.

CS1108.8. Analyze paging, segmentation, and segmentation with paging for VM support in memory management. Implement different page replacement algorithms.

CS1108.9. Analyze and implement various disk-scheduling algorithms.

Syllabus (Theory)

UNIT-1: **Introduction to OS:** Concept of Operating Systems, Generations of Operating systems, Types of Operating Systems, services, system calls, characteristics of OS, Structure of an OS-Layered, Monolithic, Microkernel Operating Systems, Concept of Virtual Machine. Case study on LINUX and WINDOWS Operating System.

UNIT-2: Process: Concept of process, Process states, Process State transitions, Process Control Block (PCB), Context switching, **Thread:** Definition, Benefits of threads, Types of threads, difference between process and thread, multithreading, multithreading models, Process **scheduling**: Foundation and Scheduling objectives, Types of Schedulers. **Scheduling criteria:** CPU utilization, Throughput, Turnaround Time, Waiting Time, Response Time**. Scheduling algorithms:** Pre-emptive and Non-pre-emptive, FCFS, SJF, Priority, R-R scheduling, Multilevel queue scheduling. **Inter process communication:** Critical section, Race condition, semaphores, monitors, message passing, Classical IPC Problems: Readers-Writer Problem, Dinning Philosopher Problem etc. **Deadlock:** Shared resources, resource allocation and scheduling, resource graph models, deadlock prevention, deadlock avoidance, deadlock detection, deadlock recovery algorithms.

UNIT-3: Memory Management: Memory management schemes, Contiguous/Non-contiguous memory allocation, storage management, paging, page table structure, segmentation, segmentation with paging, virtual memory, demand paging, page fault, Page replacement algorithms.

UNIT-4: File management: file concept, types and structures, attributes of a file, operations performed on file, File organization and access method, file allocation methods, directory structure, file directories, directory implementation.

UNIT-5: I/O Hardware: I/O devices, I/O hardware, device driver, Kernel I/O sub-system, Interrupt. **Disk scheduling:** Disk Structure, FCFS, SSTF, SCAN, LOOK, C-SCAN, C-LOOK.

Contents (Lab)

- Linux Operating System, components of Linux system.
- Basic LINUX commands and its Use.
  - Execution of various file/directory handling commands.
  - Commands related to standard I/O, Redirection, Pipes and Filters.
- Process Management Commands in Linux.
- Implementation of CPU Scheduling Algorithms.
- Implement Semaphores.
- Implement of Banker's Algorithm for Deadlock Avoidance.
- Implement the page replacement algorithms.
- Implement disk scheduling algorithms.

Course Title and Code:	Artificial Intelligence and Machine Learning; CS1110
Hours per Week	L-T-P: 3-0-2
Credits	4
Students who can take	B.Tech. CSE Sem V

Course Objective:

This course introduces the fundamental concepts of artificial intelligence (AI) along with state-of-the machine learning (ML) algorithms. The course will cover the development of AI and ML models to solve new as well as classical and real-world and critical problems. This course builds upon the Computational Data Analysis, and Database Management Systems and lays the foundation for the course on Advanced Machine Learning.

Course Outcomes:

On successful completion of this course, the students should be able to:

CS1110.1. Explain the role of agents and how it is related to environment and the way of evaluating it and how agents can act by establishing goals.

CS1110.2. Implement intelligent agents for making computers solve critical problems the way human beings do.

CS1110.3. Analyze the usage of Game theory and role of heuristics for building Intelligent Agents.

CS1110.4. Apply AI techniques in applications which involve perception, reasoning and learning.

CS1110.5. Acquire the knowledge of real-world knowledge representation.

CS1110.6. Identify machine learning techniques suitable for a given problem.

CS1110.7. Interpret fundamental issues and challenges of machine learning: data, model selection, model complexity, etc.

CS1110.8. Use the standards and energy efficient ML algorithms.

CS1110.9. Appreciate the underlying mathematical relationships within and across Machine Learning algorithms and the paradigms of supervised and un-supervised learning.

CS1110.10. Utilize state-of-the art algorithms of Machine Learning for building applications related to SDG goals

Course Title and Code:	**Understanding and Managing Conflict**	**CC1105**
Hours per Week	**L-T-P: 2-0-0**	
Credits	**2**	
Students who can take	B.Tech - Sem V	

Course Objective-

In today's increasingly complex and fragmented world, it is important to be able to resolve conflicts and build healthy relationships. Understanding and Managing Conflict is a course designed to prepare students to identify conflicts, manage emotions, analyze the situation and characters, and practice different frameworks to deal with conflicts.

Course Outcome:

On successful completion of this course, the students should be able to:

CC1105.1: Define a group and explain the stages of group development.

CC1105.2: Describe conflict and explain types and causes of conflict.

CC1105.3: Use inquiry and advocacy to engage with groups.

CC1105.4: Give and receive feedback effectively.

CC1105.5: Identify sources of conflict and manage them using difference conflict handling styles.

Course Title and Code:	**Introduction to IoT; EE1111**
Hours per Week	**L-T-P: 1-0-2**
Credits	**2**
Students who can take	B. Tech Sem V All Branches

Course Objective- The course aims to develop understanding of Internet of Things concepts and also develop skills for working on IoT development boards to interface sensors and actuators. The course will enable the students to upload data from sensors on a web server and to use this data for analytical purposes or to actuate some transducers.

Course Outcome:

On successful completion of this course, the students should be able to:

EE1111.1. Interface the Analog and Digital sensors to Node-MCU
EE1111.2. Develop Embedded C programs to read sensor data and upload to public cloud platform.
EE1111.3. Use Python-based IDE (integrated development environments) for the interfacing of I/O devices with Raspberry Pi.
EE1111.4. Implement communication protocols for interfacing sensors to microcontrollers.
EE1111.5. Visualize sensor data uploaded on public cloud.
EE1111.6. Apply standard protocol(s) for implementation of IoT Systems.
EE1111.7. Analyze and Improve existing systems with innovative IoT based approaches.

Course Title and Code:	**PR1101 Automation Project**
Credits	2
Students who can take	B.Tech. (All programs)

Course Objectives: This course aims to develop skills for designing, implementing and testing solutions for automation using IoT.

Learning Outcomes:

On successful completion of this course, the students should be able to:

PR1101.1 design and implement a complete project in IoT/Automation using microcontroller/SOC interfaced with sensors or any other automation hardware/tools,

PR1101.2 apply standard IoT protocol(s),

PR1101.3 use cloud servers for data streaming and analysis,

PR1101.4 implement algorithms using the data at edge/cloud,

PR1101.5 deploy techniques to conserve bandwidth/energy/other resources and achieve cost economy for project.

Students who can take	B. Tech (V Sem) OE

Course Objective- To introduce the issues, concept and frameworks for urban and regional development and planning.

Course Outcome:

On successful completion of this course, the students should be able to:

CE1215.1 Demonstrate a broad concept in urban and regional planning, including deep understanding of underlying principles and concepts.

CE1215.2 Address land-use and built-environment problems in a range of social, economic and environmental contexts.

CE1215.3 Analyze the various components of water supply, sanitation, transportation and waste management.

CE1215.4 Analyze the various types of plans and their execution.

CE1215.5 Plan and design various types of social infrastructure projects.

Course Title and Code: Numerical Methods: AS1204	
Teaching Scheme	**L-T-P: 3-0-2**
Credits	**4**

Course Objective

The course is aimed to provide students with an understanding of basic concepts of numerical methods for drawing conclusions and making decisions under uncertainty in engineering contexts. The course is focused on solving transcendental and polynomial equations, numerical differentiation and integration, and solution of ODEs & PDEs.

Course Outcomes:

On successful completion of this course, the students will be able to:

- Demonstrate a basic knowledge of the numerical methods for accurate and efficient solution of models based on linear and nonlinear systems of equations, ordinary differential equations and partial differential equations, etc.
- Apply these numerical methods to practical problems in Engineering
- Write effectively mathematical solutions and their interpretation in a clear and concise manner.
- Analyze and evaluate the accuracy of common numerical methods.

Syllabus

Modeling, Computers, and Error Analysis: Mathematical Modeling and solution using Programming and Software, Computer Arithmetic and Errors: *Approximations and Round-Off Errors, Truncation Errors and the Taylor Series*

Transcendental and polynomial equation: Solution of non-linear Equations: *Bracketing Methods, Open Methods, Roots of Polynomials*

Linear Algebraic Equations: LU Decomposition and Matrix Inversion, Iterative methods for solving system of linear equations, finding Eigen values and Eigen vectors

Interpolation and approximation: Interpolation for equally and unequally spaced points, Lagrangian Polynomial

Numerical Differentiation and Integration: Numerical Differentiation and Integration, Newton-Cotes Integration Formulae.

Ordinary Differential Equations: Difference equation, Single step methods, Stiffness and Multistep Methods, Predictor-corrector method

Partial Differential Equations: Finite Difference: *Elliptic and Parabolic Equations*, Mesh analysis.

Course Title and Code: Mobile Application Development: CS1205	
Hours per Week	**L-T-P: 3-0-2**
Credits	**4**
Students who can take	B.Tech Sem-V (CSE)

Course Objectives: This Course is designed to offer learners an introduction to Android platform and related applications in the business world. The Course will cover ethical contents and security related issues in app deployment at Google Play Store. All techniques will be illustrated using different app design with real-time and static databases. The Course lays the foundation for cross-platform app development course.

Course Outcome:

On successful completion of this course, the students should be able to:

CS1205.1. Develop high-level plans for script solutions for mobile and evaluate the post-production outcome;

CS1205.2. Design scripts to meet given interface and media control requirements;

CS1205.3. Use variables, properties and other code elements appropriately to implement the code design;

CS1205.4. Devise, carry out and evaluate functional test strategies of mobile design;

CS1205.5. Implement and evaluate techniques for the installation of mobile applications and delivery via various channels;

CS1205.6. Explain the principles of technologies which support media production and delivery on a variety of platforms;

CS1205.7. Create event listeners for responding to events;

CS1205.8. Administer permissions and Android manifests;

CS1205.9. Integrate Android XML resources with Java code;

CS1205.10. Create a Google Play Store account and preparing apps for the Play Store.

Syllabus (Theory)

Module I – Mobile Application Overview

Introduction to Mobile Computing, Introduction to Android Development Environment, Mobile Software Engineering, Design of application (view level).

Module II – Framework and User Interface Development

Frameworks and Tools, Generic UI Development, Android User (privileges), VUIs and Mobile Apps Text-to-Speech Techniques, Designing the Right UI, Multichannel and Multimodial UIs, Android Intents and Services, Characteristics of Mobile Applications

Successful Mobile Development.

Module III – Storing Retrieving Data with Real-time Database

Synchronization and Replication of Mobile Data, Getting the Model Right, Android Storing and Retrieving Data, Working with a Content Provider, Communications Via Network and the Web, State Machine, Correct Communications Model, Android Networking and Web.

Module IV – Notifications, Alarming and Location

Performance and Memory Management, Android Notifications and Alarms, Graphics, Performance and Multithreading, Graphics and UI Performance, Android Graphics and Multimedia, Mobile Agents and Peer-to-Peer Architecture, Android Multimedia, Mobility and Location Based Services.

Course Title and Code: CS1214: Cryptography	
Hours per Week	**L-T-P: 3-0-2**
Credits	**4**
Students who can take	B.Tech. Sem V

Course Objective-

In this course student will understand cryptographic algorithms and their applications. Throughout the course, students will be exposed to many exciting open problems in the field and work on programming projects. This course will help students to explore security aspects of various future courses like, Network Security, Mobile Application Developments and Cloud Computing.

Course Outcome:

On successful completion of this course, the students will be able to

CS1214.1. Explain the concept of Cryptography

CS1214.2. Realize the complexities of Cryptographic Attacks

CS1214.3. Apply the Public-Key Cryptography

CS1214.4. Learn Symmetric-Key Algorithm

CS1214.5. Use the techniques of Digital Signatures in their projects

CS1214.6. Demonstrate the Secure Protocols

Retest

1	Lab Evaluation-II	10
2	Theory Exam-III	20

Syllabus

1. Overview of cryptography. What is a cipher?

2. Basic symmetric-key encryption, Stream ciphers, one time pad, Block ciphers, AES and DES. Pseudo Random Permutations (PRP); Pseudo Random Functions (PRF); Chosen plaintext attacks (CPA);

3. Message integrity: CBC-MAC and PMAC, Collision resistant hashing, Merkle-Damgard and Davies-Meyer. MACs from collision resistance, SHA and HMAC, Active attacks

4. Public key cryptography: Arithmetic modulo primes, Vanilla key exchange (Diffie-Hellman), Public key encryption, ElGamal encryption, RSA and Rabin functions, Trapdoor permutations

5. Digital signatures: Signature using RSA, Hash based signatures, certificates, certificate transparency, certificate revocation.

6. Protocols: Identification protocols, Password protocols, salts; one-time passwords, challenge response authentication, Zero knowledge proof

7. Cryptography in the age of quantum computers, Grover's algorithm and Shor's algorithm

Text Books:

1. Introduction to Modern Cryptography, Katz and Lindell, 3rd Edition.
2. Free book of Cryptography, Dan Boneh and Victor Soup.

Course Title and Course Code: - Computer Networks and Distributed Systems (CS1111)

Credits: 4 , L-T-P : 3-0-2

Course Objectives: This course aims to provide an understanding of the fundamental concepts of computer networking, layers of protocols and network technologies. It also includes the concept of Distributed System and associated algorithms to deal with Distributed system.

Course Outcome:

On successful completion of this course, the students will be able to:

CS1111.1. Categorize the various type of Networks on the basis of geographical distance, topology and implementation.

CS1111.2. Implement socket programming to develop networking programs in C.

CS1111.3. Apply the concepts of IP addressing, subnet masking and routing algorithms to design efficient computer networks

CS1111.4. Build and deploy applications that use transport protocols like UDP, TCP

CS1111.5. Analyze distributed systems and classification of agreement protocol.

Prerequisites: (optional)

Syllabus (Theory)

Introduction, history and development of computer networks, network topologies. Layering and protocols.

Physical Layer: Different types of transmission media, errors in transmission: attenuation, noise. Repeaters. Encoding (NRZ, NRZI, Manchester, 4B/5B, etc.).
MAC Layer: Aloha, CSMA, CSMA/CD, CSMA/CA protocols. Examples: Ethernet, including Gigabit Ethernet and WiFi (802.11).
Data Link Layer: Error detection (Parity, CRC), Sliding Window, Stop and Wait protocols.
Network layer: Internet Protocol, IPv6, ARP, DHCP, ICMP, Routing algorithms: Distance vector, Link state, Metrics, Inter-domain routing. Subnetting, Classless addressing, Network Address Translation.
Transport layer: UDP, TCP. Connection establishment and termination, sliding window revisited, flow and congestion control, timers, retransmission, TCP extensions, etc.
Network Programming: Socket Programming.
Application Layer: File Transfer, DNS, DHCP, etc.
Characterization of Distributed Systems: Introduction, Examples of distributed Systems, Resource sharing and the Web Challenges. Limitation of Distributed system, absence of global clock, shared memory, Logical clocks, Lamport's & vectors logical clocks, Causal ordering of messages, global state, termination detection.

Course Title and Code: Critical Thinking for Decisions at Workplace CC1106		
Course Objective: In today's world, the idea of right and wrong is being challenged by businesses, use of technology, economic conditions, and norms of societies. The relevance of a well-reasoned decision is crucial. This course intends to make students take better decisions keeping in mind purpose, context, and ethics. **Course Outcomes** *The students will be able to:* CC1106.1 Apply strategies of Critical Thinking to examine organisational problems through positive inquiry CC1106.2 Describe and examine suitable problem-solving and ethical decision-making processes CC1106.3 Choose the simplest and logical decision among multiple alternatives CC1106.4 Evaluate solutions and count on possible risks based on purpose, context and ethics

SYLLABUS

	Topic	**Sub-topics**
1	Decision Making: Definition and Type	• Organisational decision-making • Concept of thinking triangle • Importance of decision-making at work place

2	Barriers to Sound Reasoning	• Identifying barriers to Critical Thinking • Biases, prejudices, facts, opinions, assumptions. • Overcoming the obstacles
3	Steps of Decision Making	• Factors impacting decision-making • Concept of enquiry circle • Understanding arguments in business parlance
4	Ethics and Decisions	• Theories of ethics (Teleological, Deontological, Virtue Ethics, Conduct Ethics, Rights based, Utilitarianism, Hedonism, Egoism) • Concept of Moral reasoning • Role of ethics and values in Decision Making
5	Importance of purpose and context	• Role of Stakeholders in decision making.
6	Problem analysis best practices	• Root cause analysis • Identifying questions at the heart of a problem • Thinking checklist
7	Decision Implementation Techniques	• Developing intellectual virtues • Paul Elder's model (Intellectual humility, courage, empathy, integrity and confidence.
8	Comparing alternative solutions	• Ladder of Inference • Meta-thinking • Perspectives

Course Title and Code:	**Robotic Process Automation Lab, CS1125**
Hours per Week	**L-T-P: 0-0-4**
Credits	**2**
Students who can take	

Course Objective- The course aim is to develop understanding about Intelligent Automation through Robotic Process Automation for automating business processes using software robots with cost efficient digital delivery.

Course Outcome:

On successful completion of this course, the students should be able to:

CS1125.1 Use and understand the various functionalities and features of UiPath Studio and Orchestrator.

CS1125.2 Design, implement, and use RPA activities.

CS1125.3 Develop basic robots using UiPath Community Edition.

CS1125.4 Explore various data extraction techniques.

CS1125.5 Identify processes which can be automated.

CS1125.6 Apply best practices in RPA projects.

Retest

1	Quiz	20
2	Lab Evaluation-I (Test)	20

Syllabus (Theory):

Unit I: Programming Basic & Recap: Programming concept basic; **Introduction to RPA:** scopes and techniques of automation, RPA components and various RPA platforms, Introduction to UiPath as RPA platform, Applications and Benefits of RPA, Introduction to UiPath Studio, UiPath robot, types of robots, and UiPath Orchestrator. Brief on Studio interface and components.

Unit II: **RPA Projects:** Types of Projects in RPA: Sequence, Flowcharts, and State machines; Variables, Arguments, Data Types and Control flow: flow chart activities and sequences activities. **Data Manipulation:** Text and Data Manipulation**,** Data tables, clipboard management, file operation, importing from and exporting to CSV/Excel file and data table.

Unit III: **Control of Controls:** Attach window activity, Finding the control, Waiting for a control, Act on Control- mouse and keyboard activity. Handling event driven controls as working with UiExplorer handling events. Introduction to Recorder, OCR, types of OCR and Screen Scrapping Using OCR. **Selectors:** Selectors, Defining and Assessing Selectors, Customization, Debugging, Dynamic Selectors, Partial Selectors, RPA Challenge.

Unit IV: **Application with Plugins and Extensions:** Java plugins, Citrix automation, Mail plugins, PDF plugins, Web integration, excel and word plugins. Extensions- Java, chrome, firefox, and Silverlight. **UiPath Advanced Automation concepts and techniques:** Image, Text and introduction of Citrix Automation; **Excel Data Tables & PDF:** Data Tables in RPA, Excel and Data Table basics, Data Manipulation in excel, Extracting Data from PDF, Extracting a single piece of data, Anchors. **Email Automation:** Incoming Email automation, Sending Email automation.

Unit V: **Debugging and Exception Handling:** Common exceptions and ways to tackle them, Strategies for solving issues, Catching errors **Capstone Project.**

LAB

1. Setup, configuration, and introduction of components of UiPath Studio.
2. Execution of prebuilt examples of sequence, flow chart and state machines projects.

Create a sequence/Flow chart activity defining various types of variable as:

3. Generic Value Variables, Text Variables, Boolean Variables, Number Variables,
4. Array Variables, Date and Time Variables, Data Table Variables

Managing Arguments:

5. Create two activities, one activity defined with arguments and second activity which manages the argument to receive value from first activity.
6. Create an activity to manage importing active namespaces.

Create a project to Manage the control Flow:

7. The Assign Activity, The Delay Activity, The Do While Activity, The If Activity
8. The Switch Activity, The While Activity, The For-Each Activity, The Break Activity.

The Recording toolbar Activity:

9. Exercises using basic, web, and Desktop recoding.
10. Automate manual recording projects on Left-click on buttons, check boxes, drop-down lists, GUI elements, and Text typing

Data Scrapping:

11. Bot to extract structured data from your browser, application or document to a database, .csv file or even Excel spreadsheet.
12. Image and Text Automation
13. Excel Data Tables & PDF
14. Email Automation
15. Deployment of plugins and extensions.
16. Deploying and maintaining the BOT.

Students who can take	B. Tech Sem VI sem (B Tech CSE, EEE and ME)
Course Objective: This course aims to develop understanding of various methods of remote sensing, satellite images data acquisition, data format, data analyze and data output. It also explains the major applications of GIS i.e. climate change, natural resources management and water resources management.	
Course Outcomes: **On completion of the course, the student should be able to:** CE1114.1 Asses the various sources for remote sensing data. CE1114.2 Analyze the data from various type of images. CE1114.3 Analyze the data acquisition and data output through GIS. CE1114.4 Incorporate GIS in resources management and climate changes.

Course Title and Code:	Cloud Computing Architecture; CS1217
Hours per Week	L-T-P: 3-0-2
Credits	4
Students who can take	B.Tech. CSE Sem VI (2019-2023)

Course Objective:

The course presents a top-down view of cloud computing, from applications and administration to programming and infrastructure. The main focus is on deployment of solution elements, including infrastructure components such as networks, systems and applications services in the cloud infrastructure. This course builds upon the Operating System, Computer Networks, Database, Computer Architecture.

Course Outcomes:

On successful completion of this course, the students should be able to:

CS1217.1. Apply fundamental concepts in cloud infrastructures to understand the trade-offs in power, efficiency and cost

CS1217.2. Build and deploy cloud applications that are resilient, elastic and cost-efficient

CS1217.3. Analyse the trade-offs between deploying applications in the cloud and over the local infrastructure.

CS1217.4. Deploy applications over commercial cloud computing infrastructures, i.e., Google Cloud

CS1217.5. Analyse the performance, scalability, and availability of the underlying cloud technologies and software

Prerequisites	Operating System, Computer Networks, Database, Computer Architecture

Syllabus:

Cloud Computing Overview: Definition and evolution of Cloud Computing, Enabling Technologies, Service and Deployment Models, Popular Cloud Stacks and Use Cases, Benefits, Risks, and Challenges of Cloud Computing, Economic Models and SLAs, Topics in Cloud Security

Cloud Infrastructure: Historical Perspective of Data Centres, Datacentre Components: IT Equipment and Facilities, Design Considerations: Requirements, Power, Efficiency, & Redundancy, Power Calculations, PUE and Challenges in Cloud Data Centres, Cloud Management and Cloud Software Deployment Considerations

Google Cloud Platform Fundamentals: Google App Engine, Google Compute Engine, Google Kubernetes Engine, Google Cloud Storage, Google Cloud SQL, and BigQuery, Google Cloud Resource Manager hierarchy and Google Cloud Identity and Access Management, infrastructure design, and virtual networking configuration with Virtual Private Cloud (VPC), Projects, Networks, Subnetworks, IP addresses, Routes, and Firewall rules

Google Cloud Infrastructure: Compute Engine, Core Services, customer-supplied encryption keys, security and access management, quotas and billing, and resource monitoring, Scaling and Automation, securely interconnecting networks, load balancing, auto-scaling, infrastructure automation and managed services, Design and Process, define and balance business and technical requirements to design Google Cloud deployments, Kubernetes Engine, Creating and managing software containers and an introduction to the architecture of Kubernetes.

Cloud Computing Standards- Introduction- Objectives, Best Practices and Standards, Practical Issues- Interoperability- Portability- Integration- Security

Course Name: Deep Learning **L-T-P: 3-0-2**
Course Code: CS1218 **Credits: 4**

Course Objective: This course covers the most successful form of artificial intelligence, deep learning. We will be covering linear regression, logistic regression, deep neural networks, convolutional and recurrent neural networks. The course will also focus on optimization techniques like gradient descent and its variants. Programming will be an important component of the course. We will be using Python as our primary language. For implementation of algorithms, we will be using Tensorflow and Keras. The course will be equally inclined towards theory and programming.

Course Outcome:

On completion of this course, the students will have the ability to:
CS1218.1 Prioritize the collection and usefulness of data for a particular deep learning task
CS1218.2 Apply theory and implementation learned in the course to real world problems on computer vision and natural language processing
CS1218.3 Judge whether a particular problem can be solved using deep learning or not
CS1218.4 Critically analyze which architecture to use for a specific problem
CS1218.5 Design and implement deep learning algorithms using Tensorflow and Keras framework

Course Topics:

Topics	Lecture Hours
UNIT – I Introduction Linear and logistic regression. Cost function for logistic regression.	4
UNIT – II Deep Neural Networks Generalization of logistic regression to deep neural networks. Cost functions. Optimization algorithms: Gradient descent, Stochastic gradient descent, Momentum, RMSprop, Adam.	9
UNIT – III Regularization Techniques Underfitting and overfitting of neural networks: bias and variance. L1, L2 and dropout regularization techniques, hyperparameter tuning.	6
UNIT – IV Deep Learning for Computer Vision Basics of CNN: convolutions and pooling. Detailed understanding of Alexnet, ResNet, VGG-16, VGG-19 and inception architectures. Their implementations. Object recognition and face recognition.	12
UNIT – V Deep Learning for Natural Language Processing Basics of RNN, LSTM, GRU, Bidirectional RNN, deep RNNs. Representations of words as vectors. One hot encoding and word embeddings. Learning word embeddings using word2vec, GloVe. Transformers.	9

Hours per Week	**L-T-P: 3-0-2**
Credits	**4**
Students who can take	B. Tech Sem VI

Course Objective: In this course, students will gain a broad understanding of the discipline of software engineering and apply theories, models, and techniques to solve real-world problems.

Course Outcome:

On successful completion of this course, the students will be able to:

CS1113.1. Use software development lifecycle models for project development.

CS1113.2. Design solutions in various application domains using software engineering approaches that integrate ethical and economic concerns.

CS1113.3. Elicit and evaluate functional and non-functional requirements for a software system.

CS1113.4. Design, represent and document software requirements specifications according to IEEE standards.

CS1113.5. Apply UML modeling for software design.

CS1113.6. Apply coding standards and guidelines.

CS1113.7. Prepare code checklist and perform code inspections, code reviews and walkthrough.

CS1113.8. Develop and implement various manual and automated testing procedures.

CS1113.9. Estimate the cost of the software project.

CS1113.10. Evaluate software in terms of software quality and quality assurance according to ISO standards.

Prerequisites: C, C++ or Java programming

Syllabus (Theory)

UNIT I: Basics, Software Engineering, Software Components, Software Characteristics, Software Crisis, Software Engineering Processes, Software Development Life Cycle (SDLC) Models: Waterfall Model, Iterative waterfall model, Incremental Process Model, Evolutionary Development Models, Specialized Process Model, V-Model, An Agile view of the process, Agile process models namely Extreme Programming (XP), Adaptive software development (ASD), Scrum and Crystal.

UNIT II: Requirement Engineering Process: Elicitation, Analysis, Documentation, Review and Management of User Needs, Feasibility Study, Information Modeling, Data Flow Diagrams, Entity Relationship Diagrams, Decision Tables, SRS Document, IEEE Standards for SRS.

UNIT III: Basic Concept of Software Design, Architectural Design, Low-Level Design, Modularization, Design Structure Charts, Pseudo Codes, Flow Charts, Coupling and Cohesion Measures, Design methods and Strategies: Function Oriented Design, Object Oriented Design, Top-Down and Bottom-Up Design.

UNIT IV: Coding and Software Testing: Coding standards, programming style, code inspection, code review and walkthrough; Testing Objectives, Unit Testing, Integration Testing, Acceptance Testing, Regression Testing, Testing for Functionality and Testing for Performance, Top-down and Bottom-up, Testing Strategies, Test Drivers and Test Stubs, Structural Testing (White Box Testing), Functional Testing (Black Box Testing), Test Data Suit Preparation, Alpha and Beta Testing of Products.

UNIT V: Software Measures, Metrics and Models: Various Size Oriented Measures, Hallstead's Software Science, Function Point (FP) Based Measures, Cyclomatic Complexity Measures, Control Flow Graphs, Software metrics classification, Cost estimation models, Estimation of Various Parameters such as Cost, Efforts, Schedule/Duration, Constructive Cost Models (COCOMO); Software quality and quality assurance, ISO standards; Software Re-engineering, Reverse engineering and Software Configuration.

Course Syllabus (Practical):

Experiments are to practice software engineering techniques. Use any open-source CASE tool. You can choose any other CASE tool, as per choice.

Design Approach: Object-Oriented , These designs can be done on any automation system e.g., library management system, billing system, payroll system, bus reservation system, students result management system.

- Do a feasibility study
- Document all the requirements as specified by the customer in Software Requirement Specification. IEEE Standards for SRS
- Software Design: DFD/Design structure chart/activity diagram/sequence diagrams/ interaction diagram/class diagram/state chart diagram etc. for project. IEEE standards for Software design description (SDD).
- Code and test the project

Course Title and Code: CS1112: Compiler Design	
Hours per Week	**L-T-P: 3-0-2**
Credits	**4**
Students who can take	**B.Tech. Sem (VI)**

Course Objective- This course aims to familiarize the students with the design of a compiler including its phases and components, develop a compiler.

Course Outcome:

On successful completion of this course, the students should be able to:

CS1112.1 Specify and analyze the lexical, syntactic and semantic structures of programming language features

CS1112.2 Separate the lexical, syntactic and semantic analysis into meaningful phases for a compiler to undertake language translation

CS1112.3 Write scanners, parsers, and semantic analyzers without the aid of automatic generators

CS1112.4 Utilize the compiler design concept to write efficient programs

CS1112.5 Design the structures and support required for compiling advanced language features.

Course Title and Code: Full Stack Web Development with REACT (CS1212)	
Hours per Week	**L-T-P: 3-0-2**
Credits	**4**
Students who can take	B. Tech. CSE VI

Course Objective: This course will equip the students with understanding and skills for MERN stack web development using MongoDB database, NodeJS, Express and React library.

Course Outcome:

On successful completion of this course, the students should be able to:

CS1212.1 Develop high-level plans for script solutions for web to evaluate the post-production outcome.

CS1212.2 Implement front end web design in ReactJs.

CS1212.3 Design scripts to meet given interface and media control requirements.

CS1212.4 Devise, carry out and evaluate functional test strategies of web design.

CS1212.5 Implement and evaluate techniques for the installation of cross platform mobile applications and delivery via various channels.

CS1212.6 Implement NoSQL databases using MongoDB, work within a Node.js environment and Express framework.

CS1212.7 Communicate to the client side through a RESTful API and web services.

Prerequisites: HTML, CSS, JavaScript, Programming Language

Course Title and Code: Disaster Management: CE1206	
Hours per Week	**L-T-P: 3-1-0**
Credits	**4**
Students who can take	B.Tech Sem VI sem (2019-2023) (OE)
Course Objective: This course aims to develop understanding of various natural and manmade disasters. Natural disasters include earthquake, Tsunami, Flood, forest fires and Land Slides. Manmade disasters include fire, Industrial Pollution, embankment failure, structural failure and due to electric supply. Topics includes the causes for these disasters and remedial measures which can minimize the losses to the life and property. The course also includes the identification and description of electric supply resilience and restoration.	

Course Outcomes

On completion of the course, the student should be able to:

CE1206.1 Asses the types of disasters, causes and their impacts.

CE1206.2 Assess vulnerability and various methods of risk reduction measures and mitigation.

CE1206.3 Draw the hazard and vulnerability profile of a given region.

CE1206.4 Analyze the impact of Storms and Severe Weather on electric utility.

CE1206.5 Plan and execute framework to black start and restoration procedure with considering security criteria and power system reliability.

Syllabus (Theory)

Unit-1 Introduction to Disasters, Various types of disaster, Natural: Flood, Earthquake, cyclone, Land slide, Manmade: Fire, Industrial Pollution, embankment failure, structural failure, Loss of resources.

Unit-2

Risk and Vulnerability: Risk: Its concept and analysis, Risk reduction, Vulnerability: Its concept and analysis, strategic development for vulnerability reduction

Unit 3

Disaster Management in Electrical Systems: Causes of Extended Outages, System Impact of the Loss of Major Components, Methods to Reduce Energy System Vulnerability, Development of an On-Site and Off-site Disaster management Plan, Accident prevention techniques and Reporting procedures, Investigation reports, Impacts of Blackouts.

Unit – 4

Management- Objectives, Processes, Events, analysis, base-line data, forecasting and Warnings. Disaster preparedness plan concept and nature, Emergency operation center and IT aids- physical environment, Applications.Public-private agency co-ordination- federal, state and local disaster response organization and network, Citizen and community role in disaster response and recovery.

Case Studies

1. A Case study on flood Hazard
2. A case study on Tsunami Hazard
3. A case study on Earthquake
4. A case study on Forest fire
5. A case study on structural failure
6. A case study on Electrical Disaster Recovery Operations for a Hospital
7. A Case study of Impacts of Cyclones on the Power Sector in India.
8. Impact assessment of Storms and Severe Weather on electric utility infrastructure.

Course Title and Code:	**Minor Project; PR1103**
Hours per Week	**L-T-P: 0-0-2**
Credits	**4**
Students who can take	B.Tech Sem VII

Course Objective- This course offers an opportunity to apply and extend knowledge learned throughout the program to solve real world issues. The minor projects undertaken span a diverse range of topics, including design, simulation, and experimental studies. The course emphasizes, facilitating student learning in technical, project implementation and presentation spheres.

Course Outcome:

On successful completion of this course, the students should be able to:

PR1103.1. Identify and formulate industrial and societal problems.
PR1103.2. Design engineering solutions for complex problems.
PR1103.3. Develop/fabricate, and implement solutions for identified problem.
PR1103.4. Demonstrate the knowledge, skills and attitudes of a professional engineer.

Operation Procedure:

Students are expected to achieve the objective of the project work. The students are expected to submit a synopsis at the beginning of the semester for approval from the departmental committee in a specified format. The students are expected to report to their mentor(s) frequently and will be evaluated continuously. Department committee will evaluate the work through seminars and progress reports as per the evaluation scheme. At the end there would be a demonstration of the solution and possible future work for the work done.

- Student must devote full semester for Minor Project.
- Student must report to the mentor(s) regularly.
- Seminar evaluation must be carried out in the presence of at least two-committee members.
- Experts in the relevant area constituted by the supervisor.
- Final Seminar Report to be submitted must be in formal hard bound cover bearing of the Institute emblem.
- Assessment is by means of a synopsis presentation, submission of a thesis, and a public demonstration of work undertaken.

Course Title and Code:	**Advanced Data Structures and Algorithms; CS1213**
Hours per Week	**L-T-P: 3-0-2**
Credits	**4**
Students who can take	B. Tech Sem VII CSE

Course Objective- The course aims to develop deeper understanding about algorithm design paradigms and advanced data structures for solving complex algorithmic problems. This course complements the learning of the courses on data structures and design and analysis of algorithms.

Course Outcome:

On successful completion of this course, the students should be able to:

CS1213.1. Argue the correctness of algorithms using inductive proofs and loop invariants.

CS1213.2. Analyse algorithms using amortized analysis, including the accounting method and the potential method, as required.

CS1213.3. Write program to solve algorithmic problems using divide-and-conquer and dynamic-programming paradigm.

CS1213.4. Implement variants of the self-balancing tree.

CS1213.5. Analyse, implement and use heap structures and hashing techniques.

CS1213.6. Apply and implement the disjoint set data structures to solve problems modelled by graph.

CS1213.7. Evaluate and apply appropriate energy efficient algorithmic design technique for solving complex algorithmic problem.

Retest

1	Theory Exam -III	20
2	Lab Evaluation-I (Test)	10

Syllabus (Theory):

Unit 1: Amortized Analysis: Aggregate, Accounting and Potential Method, Dynamic tables, **External Sorting**: Introduction to external sorting. Selection trees & k-way merging. Run generation. Optimal merging of runs.

Unit 2: Trees Variants: B Tree (2-3/2-3-4 Tree), RB Tree, Optimal Binary Search Tree, Splay tree, AA-Tree, Treap. **Indexed Tree**: Queaps

Unit 3: String Matching Algorithms: Knuth Morris Prat, and Boyer Moore. **String Processing Data Structures**: Tries, Suffix Tree, **Disjoint Set Data Structures:** Disjoint-set operations, representation of disjoint sets, Disjoint-set forests

Unit 4: Heaps: Binomial Heap, Fibonacci Heap, Pairing heap, Beap, **Space partitioning tree**: Binary space partitioning, KD tree, Quad tree, Interval Tree, Segment Tree, Priority Search Tree.

Unit 5: Hashes: Introduction, Perfect hash function - Cuckoo hashing, Coalesced hashing, Universal Hashing. **Applications**: Searching, Memory Indexing, Computer Graphics, Image Data Structures, Computational Biology.

LAB

Practical work will be based on programming exercises on topics covered in the theory syllabus. A tentative list of programs is given below for reference.

1. Write a program in C to sort a small sequence using the recursive merge sort algorithm.
2. Write a program in C to sort a small sequence using the iterative merge sort algorithm.
3. Write a program in C to implement a K-way merge sort for external sorting of divide conquer and combine approach. Analyze and compare the complexity of it with any other sorting technique using asymptotic and amortized analysis.
4. Write a program in C to check if a binary tree is subtree of another binary tree.
5. Write a program in C to implement a BST with menu-driven operations using array/linked list.
6. Write a program in C/C++ to implement a Splay tree for 20 user-defined integers. Search for a specific key and display the preorder traversal on the splay tree to see the search effect on self-balancing BST.
7. Write a program in C/C++ to implement trie data structure most widely used for long strings processing.
8. Write a program in C to search a pattern P in a text T using Boyer Moore pattern matching algorithm.
9. Write a program to implement a suffix tree for pattern matching, use the same pattern P and text T as in question 8.
10. Write a program in C++ to implement KD tree and search the minimum in tree. Compare the running time complexity with minimum search in BST of similar elements.
11. Use C++/Python STL to implement Hash/Map/Dictionary for optimal searching.

Course Title and Code: Blockchain Technology and Applications CS1203	
Hours per Week	**L-T-P:3-0-2**
Credits	**4**
Students who can take	**B. Tech(VII sem) Elective**

Course Objectives: This course aims to provide an understanding of the essential concepts of blockchain technology by initially exploring the Bitcoin protocol followed by the Ethereum protocol to lay the foundation necessary for developing applications and programming for Blockchain Technology.

Course Outcome:

On successful completion of this course, the students should be able to:

CS1203.1. Recognize foundational concepts of blockchain, and apply these program concepts on the blockchain.

CS1203.2. Develop, Test and Execute a smart contract.

CS1203.3. Apply the consensus mechanism on application.

CS1203.4. Identify use cases and develop, execute and test the application.

CS1203.5. Recognize the differences between the most prominent blockchain structures and permissioned blockchain service providers.

Course Contents

Introduction to Blockchain: - History: Digital Money to Distributed Ledgers, Design Primitives: Protocols, Security, Consensus, Permissions, Privacy. Blockchain Architecture and Design: - Basic crypto primitives: Hash, Signature, Hash chain to Blockchain, Basic consensus

mechanisms: Requirements for the consensus protocols, Proof of Work (PoW), Scalability aspects of Blockchain consensus protocols. Permissioned Blockchains: Design goals, Consensus protocols for Permissioned Blockchains. Ethereum network, EVM, Transaction fee, Ether, gas, Solidity.
Smart contracts, Use case I: Blockchain in Financial Software and Systems (FSS): (a) Settlements, (b) KYC, (c) Capital markets, (d) Insurance. Use case II: Blockchain in the trade supply chain: (a) Provenance of goods, visibility, trade supply chain finance, invoice management discounting, etc. Blockchain Cryptography. Research aspects I (a) Scalability of Blockchain consensus protocols (b) Case Study various recent works on scalability, Research aspects II (a) Secure cryptographic protocols on Blockchain (b) Case Study Secured Multiparty Computation, Blockchain for science: making better use of the data-mining network, Case Studies: Comparing Ecosystems - Bitcoin, Hyperledger, Ethereum and more.

Course Title and Code:	**Natural Language Processing; CS2203**
Hours per Week	**L-T-P: 3-0-2**
Credits	**4**
Students who can take	B. Tech. Semester VII

Course Objective- This course will cover the latest advances in natural language processing, primarily through the applications of deep learning using programming in Python and Tensorflow/Keras and/or PyTorch. It will cover basics of natural language processing through word vector representations, language models for neural machine translation and various other tasks like summarization, question answering, chatbots, etc.

Course Outcome:

On successful completion of this course, the students should be able to:

CS2203.1. Analyze how words are represented as vectors for natural language processing.
CS2203.2. Model NLP problems using tools from calculus, linear algebra and probability.
CS2203.3. Design RNNs for various NLP tasks like machine translation.
CS2203.4. Design transformer and BERT models for various NLP tasks.
CS2203.5. Design and analyze their own algorithms and implement them using Tensorflow/Keras or PyTorch.

Syllabus (Theory):

UNIT – I: Review
Basics related to Calculus, Linear Algebra, probability, optimization for deep learning.

UNIT – II: Basics of Deep Learning
Simple and advanced word vector representations: word2vec and GloVe. Softmax and single layer neural networks. Deep neural networks and backpropagation, overfitting, regularization, activation functions. Introduction to Tensorflow/Keras and PyTorch.

UNIT – III: Recurrent Neural Networks
Recurrent Neural Networks for natural language processing, Seq2Seq and Large-scale deep learning, GRUs and LSTMs. Implementations using Tensorflow/Keras and PyTorch.

UNIT – IV: Advanced Architectures for NLP
Transformers and BERT model for language translation and question answering and their implementations, chatbots, etc. Discussion on the future of natural language processing using deep learning.

Text Books:

There is no text book for the course. However, we will closely follow the following course taught at Stanford University.

Course Title and Code: Cross-Platform App Development: CS1215	
Hours per Week	**L-T-P: 3-0-2**
Credits	**4**
Students who can take	B. Tech. CSE Sem VII

Course Objective: This course will equip the students with understanding and skills for native components of mobile app using MongoDB database, NodeJS, Express and React Native. This course complements learning of the course on mobile application development.

Course Outcome:

On successful completion of this course, the students should be able to:

CS1215.1. Develop high-level plans for script solutions for mobile app to evaluate the post-production outcome.

CS1215.2. Implement front end app design in **React Native**.

CS1215.3. Design scripts to meet given interface and media control requirements.

CS1215.4. Devise, carry out and evaluate functional test strategies of app design.

CS1215.5. Implement and evaluate techniques for the installation of cross platform mobile applications and delivery via various channels.

CS1215.6. Implement NoSQL databases using **MongoDB**, work within a **Node.js** environment and **Express** framework.

CS1215.7. Communicate to the client side through a RESTful API.

Syllabus (Theory)

Module I – Multiplatform Mobile App Development with React Native

This module introduces you to hybrid mobile application development. You will learn about React Native and explore some of the features of React Native to implement a mobile app based on the React application that was implemented in the previous course on React.

Module II – React Native UI Elements and Redux
This module introduces you to various React Native UI elements. We will look at how we can make use of these elements in designing the various views of our application. You will get an overview of the Flux architecture and introduced to Redux as a way of realizing the Flux architecture

Module III – React Native Alerts, Animations, Gestures, and Persist Redux Store
In this module we look at enhancing the user experience through the use of animations and support for gesture-based interaction. We also look at persisting the redux state, and alerting the users

Module IV – Accessing Native Capabilities of Devices
In this module you will explore the Expo SDK that enables you to access the native capabilities of the mobile devices. You will use a few SDK APIs in order to understand the general concepts and the patterns for using these APIs within your React Native application

Text Books and References:

1. Fullstack React Native: Create beautiful mobile apps with JavaScript and React Native

2. React Native in Action: Developing iOS and Android Apps with JavaScript

3. Practical React Native: Build Two Full Projects and One Full Game using React Native

4. https://reactnative.dev/docs/getting-started

Hours per Week	**L-T-P: 3-0-0**
Credits	**4**
Students who can take	B.Tech Sem VII EEE/CSE

Course Objective- This course imparts knowledge on image preprocessing and machine learning for image recognition and classification. It develops understanding various fundamental concepts for design of Convolutional Neural Networks (CNN) for image classification. Various advanced Neural networks developed during ImageNet challenges are introduced.

Course Outcome:

On successful completion of this course, the students should be able to:

EE1217.1 Implement Image Processing Algorithms using OpenCV tools.
EE1217.2 Design, Train and Test Neural Networks and deploy suitable activation functions using Keras/Tensorflow libraries.
EE1217.3 Identify suitable Performance Parameters and evaluate technique for best performance.
EE1217.4 Use transfer learning from existing trained networks to develop innovative solutions.

Course Title: Fintech in Retail Banking and Insurance
Course Code: FA1151
Credits: 3
Semester: V, BBA, Btech Sem VII

_____

Course Description:
The course provides overview of how fintech is transforming retail banking and insurance in India.
It provides an overview of various retail banking products (liabilities, 3rd party sales, assets) and insurance products covering in brief product features, sales channels and associates risks.
The course will help prepare students for career in retail financial services industry,

Course Learning Outcomes:

a. Introduction to retail banking & its various facets
b. Introduction to insurance and its various facets
c. How Fintech is transforming functions across insurance and retail banking and opportunities ahead

Course Content/Topics to be covered:

- Chapter 1: History of banking and evolution of retail banking
- Chapter 2: History of Insurance and introduction to Insurance business
- Chapter 3: Evolution of Fintech and introduction to Fintech
- Chapter 4: Retail liability products
- Chapter 5: Third party products
- Chapter 6: Loan calculator
- Chapter 7: Retail asset products
- Chapter 8: Credit Bureau
- Chapter 9: Life insurance products & roadmap
- Chapter 10: General insurance products and roadmap
- Guest lecture by Insurance experts
- Chapter 11: Fintech… payment gateways
- Chapter 12: Fintech… lending
- Chapter 13: Fintech… third party products brokerage, insurance, mutual funds
- Guest lecture by Fintech industry experts
- Chapter 14: Life journey of an individual… saving, insurance and retirement planning
- Chapter 15: Introduction to financial inclusion, small finance banks, microfinance and guest lecture by Small Finance Bank/ MFI expert… Optional
- Presentation by students

Evaluation Scheme:

Component	Weightage (100)
Minor Projects (5, 10% each)	50%
Mid Term Quiz (30th Sep)	10%
End Term Exam	40%

Course Title and Code:	**Advanced Statistics; AS1202**
Hours per Week	**L-T-P: 3-0-2**
Credits	**4**
Students who can take	B.Tech Sem VII (Open Elective)

Course Objective- To familiarize students with concepts of probability theory and random variables and use them to analyze real life problems. This course also focuses on developing an understanding of regression models, data analysis, model building, interpretation of results and statistical computation.

Course Outcome:

On successful completion of this course, the students should be able to:

AS1202.1. Identify and formulate fundamental probability distributions and density functions.

AS1202.2. Analyze continuous and discrete-time random variables and processes.

AS1202.3. Analyze system of multiple random variables.

AS1202.4. Compute cumulative distribution function and normalizing constant for the probability density function of one or more random variables.

AS1202.5. Apply the concept of algebra of random variables to analyze various linear systems.

AS1202.6. Design experiments as processes and analyze these using appropriate statistical tool.

1	Theory Exam	30

Syllabus (Theory):

RANDOM VARIABLES

Random variables, Distribution and density functions of random variables, Discrete and continuous random variables, Gaussian, Exponential, Rayleigh, Uniform, discrete Uniform and conditional distributions, distribution mean, variance, moments and characteristics functions.

MULTIPLE RANDOM VARIABLES

Function of two random variables, Distributions of two random variables, correlation coefficient, Joint moments, Joint characteristics functions, Conditional distributions, conditional expected values, statistical independence. Multiple random variables, distribution of sums of random variables, Central limit theorem.

OPERATIONS ON MULTIPLE RANDOM VARIABLES

Mean or expected value of multiple random variables, Variance, standard deviation, moments, Chebyshev's Inequality, moment generating function, characteristic function, covariance, variance of a linear combination of random variables.

REGRESSION ANALYSIS

Introduction to regression model, Types of regression models, Estimation of the regression coefficients and error variance, Inferences for the regression coefficients, Predicting future observations, Inverse prediction and regulation. An introduction to multiple linear regression models.

DESIGN OF EXPERIMENTS

Analysis of variance, one way classification, two-way classification.

PS1102/PR1105/ PR1104

Practice School-II/ Entrepreneurial Project/ Research Project/Semester at a partner University

Course Syllabi:

This course is for five four and half months (summer and one semester) in VII or VIII Semester. The objective of this programme is to provide the students, an opportunity to work on live projects of corporate world in various fields. During this programme, they will work on real world applications of their curricula through organizational function of their choice. The students are expected to be involved directly in problem solving efforts of specific interest to the host organization. The learning of PS-I will help them in completing PS-II successfully. PS-II duration of internship is 4 - 4.5 months. PS -II Winter internship Dec to May.

Note:
The above-mentioned contributions of the already taught flexicore/emerging tech and department elective courses is the minimum contribution out of multiple options given to students.
Contribution of courses to be taught is specified as minimum expected contribution.
Open Electives, Practice School 1 and Practice School 2 are excluded from above calculation and their contribution towards attainment of PO and PSO is in addition.
