CURRICULUM STRUCTURE AND SYLLABUS

**Bachelor of Technology in Electronics and
Communication Engineering (Programme Code: 3103)**

Batch: 2020-24

Institute of Engineering and Technology

Vision

To be one of India's most innovative higher education institutions.

Mission

To realise its vision, the University will:

Practice teaching that inculcates critical thinking and problem solving,

Pursue research that leads to innovation and enhancement of real-life applications,

Offer experience that leads to all round development, and

Develop a culture that is strongly rooted in interdisciplinarity and learning by building, not just doing.

Values

Caring for people.

Integrity including intellectual honesty, openness, fairness, and trust.

Commitment to excellence.

IQAC Documentation

Document Name: Handbook of Curriculum Structure and Syllabus, Bachelor of Technology in Electronics and Communication Engineering (Programme Code: 3103) - Batch 2020-2024.

Document Compilation Date: Jan 24, 2022

Document Description: This document supplements the document titled Curriculum Structure: BTech, MTech and BCA Programs and is prepared by the Institute of Engineering and Technology (IET), JKLU to serve as an information baseline for further planning and delivery of courses w.r.t Bachelor of Technology in Electronics and Communication Engineering (B. Tech ECE), Batch 2020-24.

It includes Program Education Objectives, Programme Outcomes, Programme Specific Outcomes, Desired minimum level of competence for POs and PSOs, Curriculum Structure, collation of Semester wise Course Description, and Course Articulation Matrix (CAM) of each course (including electives and additional courses, if any, opted by students) prepared by respective faculty members. The document also includes Programme Articulation Matrix (PAM).

This document is in compliance with BoS (upto 13th meeting) and approvals of the Academic Council (upto 20th meeting).

Document Creation Team:

Dr Devika Kataria 

Dr Milind Thomas 

Umesh Tripathi 

Quality Checked by:

Dr Sonal Jain

Program Education Objectives

The B.Tech and M.Tech. Programs at IET, JKLU are designed to prepare students for continued learning and successful careers. Our alumni are expected to:

- PEO1:** Apply their technical knowledge, complex problem solving and research skills in professional practice.
- PEO2:** Continue their intellectual development through critical thinking, self-study, apprenticeship, higher education, professional development courses, as well as participation in research groups and professional networks.
- PEO3:** Serve as ambassadors for engineering and sustainability by exhibiting high professional standards with a deep sense of civic responsibility.
- PEO4:** Effectively communicate about technical and related issues.
- PEO5:** Embrace the roles of team members and leaders in their careers.

Program Outcomes

“Competence is a demonstrated ability to apply knowledge, skills and attributes for achieving desirable results.” The graduates of B.Tech. and M.Tech. Programs at IET, JKLU will have following competencies:

PO 1: Life-long learning: Demonstrate inquisitiveness, open mindedness, and the ability to engage in independent and life-long learning in the broadest context of technological, organizational, economic, and societal changes.

PO 2: Citizenship, Sustainability, and Professional ethics

PO 2a: Demonstrate knowledge of constitutional values of liberty, equity, justice, and fraternity with understanding of the impact of the engineering solutions in societal and environmental contexts as well as a sense of responsibility for sustainable development.

PO 2b: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, cultural, and environmental issues and the consequent responsibilities relevant to the professional engineering practice.

PO 2c: Demonstrate commitment for professional integrity and excellence and respect for ethics, responsibilities and norms as prescribed for the engineering practice.

PO 3: Engineering knowledge and Modern tool usage

PO 3a: Demonstrate clear conceptual understanding of fundamentals of engineering specialization and cognitive flexibility to appropriately ‘transfer’ what has been learned in a context, to different situations.

PO 3b: Apply engineering thinking, computational thinking, and the knowledge of mathematics, natural and social sciences, engineering fundamentals, information technology, engineering specialization, and engineering management to the solution of complex engineering problems.

PO 3c: Create, select, modify, and apply appropriate techniques, best practices, standards, resources, and modern engineering and IT tools including prediction and modelling to engineering and social activities with an understanding of the limitations.

PO 4: Complex problem solving, Design and Research

PO 4a: Identify, formulate, review research literature, and analyze complex engineering problems to arrive at substantiated conclusions using critical thinking along with principles of mathematics, computing, engineering as well as natural and social sciences.

PO 4b: Use systems thinking and reflection to identify and consider underlying structures, patterns, volatility, uncertainties, complexities, ambiguities, complications, and risks to design and develop engineering solutions for complex problems to meet the specified and anticipated needs with appropriate concern for constraints, performance, sustainability, and professional ethics.

PO 4c: Use research-based knowledge and research methods including design of experiments, simulation, analysis and interpretation of data, and synthesis of the information to evaluate and improve the engineering solutions and practice.

PO 5: Individual & teamwork and Engineering management

PO 5a: Ability to work effectively as an individual and as a team member or leader in diverse and distributed teams, and in multidisciplinary settings.

PO 5b: Ability to apply engineering management principles to one’s own and team’s work to manage engineering projects and operations and in multidisciplinary environment.

PO 6: Communication: Ability to communicate effectively on complex engineering and technology activities, situations, problems, and solutions using verbal, textual, and pictorial elements with the colleagues, engineering community, users, clients, policy makers, and society at large with intellectual honesty, clarity, empathy, and compassion.

PO 7: Innovation and entrepreneurship:

PO 7a: Demonstrate enthusiasm and understanding to identify opportunities and translate research in engineering and other disciplines to conceive and design innovative engineering solutions for business, industry, and societal problems.

PO 7b: Demonstrate enthusiasm and understanding to conceive and plan technology based new ventures either as independent start-up businesses or within existing corporate structures.

Program Specific Outcomes

The Electronics and Communication Engineering Graduates of JKLU will be able to:

ECEPSO1: Conceive, Design, Implement, and Manage Electronics and Communication Systems by using principles of Circuit Design, Signal Processing, Communication Systems, Digital Systems, Automation, Computing, Sustainability and state of the art components and tools

ECEPSO2: Serve in fields of Telecommunication, Medical Electronics, Consumer Electronics, Automation, IT and Engineering services

Desired minimum level of competence* for POs and PSOs

PO/PSO	Competence Level
PO 1	Competent
PO 2a	Novice
PO 2b	Novice/Advanced Beginner
PO 2c	Novice
PO 3a	Competent
PO 3b	Advanced Beginner
PO 3c	Advanced Beginner
PO 4a	Advanced Beginner
PO 4b	Advanced Beginner
PO 4c	Novice
PO 5a	Advanced Beginner
PO 5b	Advanced Beginner
PO 6	Advanced Beginner
PO 7a	Advanced Beginner
PO 7b	Novice
ECEPSO1	Competent
ECEPSO2	Competent

Following process has been adopted to create Course Articulation Matrix (CAM) and Program Articulation Matrix (PAM).

- Course Outcome of each Course is mapped to Program Outcome (PO) / Program Specific Outcome (PSO) using three Levels viz., Low Correlation (1), Moderate Correlation (2) and Substantial Correlation (3).
- Average of these Levels of each Course Outcome w.r.t each specific PO/PSO is calculated, and it indicates expectations laid in a course to attain different PO/PSO. In order to avoid over commitment of a course w.r.t its contribution to POs/PSOs, the following validation check is applied on the sum of PO/PSO wise averages in each course.

$$\sum (\text{Average}) \leq \text{Min} (\text{Credits} * \text{Year}, 15)$$

In above equation, Credits are the credits assigned to the course, Year indicates the level of the students from 1st to 4th year. In case this sum exceeds the upper limit, CO-PO mappings are revised. This check ensures that early or low credit courses are not overburdened with very high expectations.

- For creation of Program Articulation Matrix, sum of these averages of different courses w.r.t each PO/PSO is calculated and interpreted as per following Table.

Competence Level *	B.Tech
Novice	<8
Advanced Beginner	8 - 16
Competent	>=16

Novice* (N): Knows objective facts, features, and rules for determining actions w.r.t. this PO/PSO without being context-sensitive. The student has studied the basic concepts.

Advanced beginner* (AB): Recognizes common situations w.r.t. this PO/PSO that help in recalling which rules should be exercised, starts to recognize and handle situations not covered by given facts, features and rules. The student has problem-solving and repeated practice experience for common situations w.r.t. this PO/PSO.

Competent* (C): Performs most standard actions w.r.t. PO/PSO without conscious application of rules after considering the whole situation. Handles new situations through the appropriate application of rules, can design systems, and may lead. Has demonstrated this PO/PSO through repeated engagements in advanced problem-solving, projects, extensive practice in common and exception situations, and participated in professional networks.

Total Credits								167

- ❖ Minimum required credit – 160
- ❖ A student can choose to drop DE/OE and still complete the minimum credit requirement of 160 for completion of B.Tech
- ❖ Credits can vary for specific (*) courses

List of Electives	
Sem V	
DE-I (Tentative)	OE-I (Tentative)
Real Time Operating Systems- EE1214	Urban and Regional Planning- CE1215
Cyber Security-EE1219	Introduction to User-Experience- IL1204
	Idea to Business Model- ED1102
	Design and Manufacturing
	Numerical Methods- AS1204
Sem VI	
Emerging Tech week (Tentative)	
Building RPA Applications- CS1121	
Electric Vehicle- EE1116	
DE-II, III (Tentative)	OE-II (Tentative)
Industrial IoT- EE1216	Electric Vehicle Technology-EE1220
Software Defined Radio	Green Energy- IL1202
Industrial Electronics- EE1112	Mechatronics-ME1207
Electrical Safety	Disaster Management- CE1206
	Modern Physics
	Introduction to Nano Technology
	Introduction to Quantum Computing
	Engineering Optimisation
	Integral Transforms
	Algorithm Design and Analysis-CS1126
	Virtualisation and Cloud Computing-CS1127
Sem VII	
DE-IV, V, VI (Tentative)	OE-III (Tentative)
Industrial Drive and E-Vehicle- EE1206	Geographical Information System- CE1214
Industrial Robotics- IL2203	Operations Research- AS1201
Information Theory and Coding- EE1218	Fintech in Retail Banking and Insurance- FA1151
Advanced Communication Systems- EE1211	Industrial Safety
Machine Vision- EE1217	Advanced Statistics- AS1202
Advances in Power Delivery- EE1213	

NOTE:

- For every credit, in each course, every student is expected to put in a total work of 35-36 hours including the class time. The specified teaching scheme is applicable if the course is taught as full semester course. However, sometimes, a few courses may actually be completed in a shorter duration by increasing the weekly contact hours.
- Students have the option for earning additional Minor certification from CSE (through electives/minor project, 16 Credits) or a Concentration in Digital Systems or Communications and Signal Processing (through electives, 12 credits).
- Learning outcomes focus on higher order thinking and practical skills. Rote learning is completely de-emphasized and assessment scheme includes several components like assignments, labs, projects, reports etc. The exams are designed to assess problem solving ability through questions focusing on analysis, synthesis, and evaluation.
- Emerging Tech Week in the VI semester is a slot in which the actual course is decided flexibly. The course has to be in an emerging technology area. Students have the option to replace the course on Emerging Tech Week by a Department elective or Open elective.
- Relevant engineering standards and sustainability issues are incorporated in all engineering courses.
- Student can optionally take upto four Independent Study courses with 2 credits each to complete their credit requirement.
- Students can optionally undergo additional summer internship of 2 credits each after first year and third year to complete their credit requirement.
- A student may sometimes be allowed to take a few additional courses for earning extra credits, fulfilling credit deficiency or completion of academically equivalent core course requirements in special cases, e.g., lateral entry/transfer cases, semester exchange at partner universities, medical cases, student detention, backlog, etc.

INDEX OF COURSE DESCRIPTIONS

Course Title and Code:		Computational Data Analysis; ES1101
Hours per Week		L-T-P: 10-2-0
Credits		10
Students who can take		B.Tech Sem I
Course Objective - This course introduces computational analysis of data based on Linear Algebra Principles and Statistics. The computational analysis will include learning and utilizing Python as a programming language.		
Course Outcome: On successful completion of this course, the students should be able to: ES1101.1 Write Simple Python programs using various datatypes, control structures, decision statements, libraries, functions ES1101.2 Develop Python programs using Objects, Classes and Files ES1101.3 Develop Programs for analyzing and interpreting Complex situations in various domains including sustainable development by combining various Linear Algebra, Statistics and Other Problem-Solving Techniques ES1101.4 Model Complex systems as Linear simultaneous equations and analyze the same using Matrix methods ES1101.5 Model Data as matrices and Find Eigen Values and Eigen Vectors and Apply the same for problem solving, e.g., ranking and performance analysis ES1101.6 Summarize and Visualize different datasets ES1101.7 Analyze and interpret different datasets using Discrete and Continuous Probability Distributions and Apply the same for problem solving, e.g., Goodness of Fit ES1101.8 Formulate and validate hypothesis with reference to different datasets ES1101.9 Apply correlation, regression, least square method for modeling, analysis, interpretation and forecasting

Students who can take	B. Tech Semester-I (Batch: 2021-2025)	
Objective of the course:		
The students will be trained to analyze an unknown situation through critical thinking and formulate it into a known problem so that solutions can be found. Once solution found, student will be able to use engineering tools to convert a conceptual idea in to a 3D Drawing.		
Learning Outcomes:		
On successful completion of this course, the students should be able to:		
ES1110.1 Approach design challenges from the perspective of the user and offer innovative solutions effectively.		
ES1110.2 Communicate and work in team towards a common goal.		
ES1110.3 Think creatively towards a desirable solution.		
ES1110.4 Develop the projection views of the products with dimensions and scales.		
ES1110.5 Create the schematic diagram and isometric view of the parts using software.

Syllabus

Design thinking:

- Various stages of the design process vis a vis problem identifying, framing, empathy-building ideation, prototyping, etc. and exposure to a variety of processes and methodologies applied by design professionals in various relevant contexts.
- understanding the tools of design research methodology through project focused case studies.

Introduction to Engineering Drawing, Orthographic Projections:

Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Scales – Plain and Diagonal Scales. Angle of projection, projection of point, line and plane.

Introduction to Engineering Materials

Introduction to materials- ferrous and non-ferrous materials, aluminum, wood, plastics. Properties of materials- ductility, brittleness, toughness, resilience, hardness, etc. Materials for 3D-printing

Drawing using AutoCAD:

Introduction to AutoCAD, drawing commands, editing commands, annotate commands, layers.

Drafting using AutoCAD:

Layout, view arrangements, dimensioning, annotation, bill of materials.

Students who can take	B.Tech Semester-I (Batch: 2021-2023)	
Course Objective: This course aims to develop scientific temper in students and improve their understanding of basic science fundamentals and their applications in industry and research.		
Course Outcomes: After course completion, the student will be able to:		
AS1102.1. Distinguish between science, pseudo-science, and other forms of knowledge.		
AS1102.2. Distinguish between science, engineering and technology, and also identify the opportunities for integrating these disciplines.		
AS1102.3. Use the scientific approach to identify and understand the societal problems.		
AS1102.4. Explain, Design, and carry out Scientific studies.

Course Title and Code:		Fundamentals of Communication CC1101
Hours per Week	L-T-P: 2-0-1	
Credits	2	
Students who can take	B.Tech/BCA Sem I	
<p>Course Objective- This course provides an introduction to the importance of effective communication, the consequences of poor communication, and the different elements of verbal and non-verbal communication. Students learn about, and enhance, the components of communication: kinesics, paralanguage (voice) and language.</p>		
<p>Course Outcome: On successful completion of this course, the students should be able to: CC1101.1 Identify different cultural differences and their impact on communication. CC1101.2 Compose grammatically correct sentences and paragraphs. CC1101.3 Deliver effective oral presentations following appropriate kinesics and paralinguistic features. CC1101.4 Identify impact of cultural differences on communication. CC1101.5 Apply appropriate communication skills across settings, purposes, and audiences.</p>

Course Title and Code:	ES1111 Fundamentals of Automation Engineering-I
Hours per Week	L-T-P: 3s-0-0
Credits	3
Students who can take	B.Tech Sem I (All programs)

Course Objective- Automation engineers design, program, simulate and test automated machinery and processes. This course is aimed at building key technical competencies needed by automation engineers. It is focused on basic knowledge and critical understanding of different technologies in the design and maintenance of automation systems.

Course Outcome:

On successful completion of this course, the students should be able to:

ES1111.1 Evaluate and simplify Boolean functions and implement the minimized logic using logic gates.

ES1111.2 Simulate basic combinational and sequential circuits with minimum complexity.

ES1111.3 Model Digital system using Finite State Machine.

ES1111.4 Design circuit using semiconductor devices and passive components.

ES1111.5 Identify the components for use in ac/dc circuits and simulate their electrical response.

ES1111.6 Simulate resonance in series and parallel RLC circuits and tune the frequency and quality of resonance peak.

Course Title and Code		
Calculus and Applied Mechanics ES1103		
Hours per Week	L-T-P: 6-2-0	
Credits	6	
Students who can take	B. Tech Semester-II (Compulsory)	
Course Objective:		
<p>This course introduces the basic elements of calculus and mechanics through some engineering projects. The application of multivariable calculus in civil and mechanical engineering is also highlighted. This course will equip students with essential domain knowledge of calculus and applied mechanics in solving basic engineering problems.</p>		
On successful completion of this course, the student should be able to:		
ES1103.1. apply analytical techniques to determine forces in structures		
ES1103.2. use commercial software (STAAD Pro.) to simulate a structure/frame and determine force in the members		
ES1103.3. model physical phenomena using calculus and solve using appropriate method		
ES1103.4. apply Newton's laws of motion and understand the concepts of dynamics concepts (force, momentum, work and energy)		
ES1103.5. interpret the geometrical significance of differential and integral calculus		
ES1103.6. solve problems of vector differentiation and integration		
ES1103.7. calculate the buoyant forces of objects with various shape and carryout the stability analysis		
ES1103.8. apply the concept of partial differentiation to solve optimization problems

Syllabus:

Vectors Algebra: basics of vector algebra, resultant vector, Application of vector equilibrium on structures.

Force systems basic concepts, equilibrium of system of forces, free body diagrams, equations of equilibrium of coplanar systems, structures (trusses), analysis of structures, method of joints, method of section, friction, virtual work, work energy principle, impulse-momentum (linear, angular).

Function of several variables, functions of one and several variables, partial differentiation, maxima-minima.

Vector Differentiation: Vector functions and derivatives, Arc length and unit tangent vector, Curvature and unit normal vector, Directional derivative and gradient vectors, Tangent plane, Divergence and curl of a vector field

Integral Calculus, area under curve, arc length, double integral, change of order and triple integrals, surface and volume integrals, solids of revolution, moment of inertia, floatation, buoyancy, centroid.

Vector Integration: Line integral, flux, work done, circulation, path independence, potential function and conservative fields, Surface area and surface integral, Green's theorem in the plane, Stoke's theorem, Divergence theorem.

Course Objective- This course aims at building key technical competencies needed by automation engineers. It is focused to simulate/implement a complete solution of automation problems including power supply, sensor, actuator, sensitized with energy usage and effects on environment.

Course Outcome:

On successful completion of this course, the students should be able to:

- ES1113.1. Analyze electrical circuits using network theorems and measure electrical parameters.
- ES1113.2. Use electrical safety practices while working on electrical projects.
- ES1113.3. Formulate mathematical models for basic mechanical and electro-mechanical systems
- ES1113.4. Develop transfer function and simulate dynamic response of a system for bounded inputs.
- ES1113.5. Classify Embedded Systems and enlighten architecture of MSP430.
- ES1113.6. Explain different sensors and displays for different applications.
- ES1113.7. Develop embedded system for various real world applications.

Course Title and Code: Object Oriented Programming (CS1101)	
Hours per Week	L-T-P: 1-0-4
Credits	3
Students who can take	B.Tech. II Sem
<p>Course Objective: This course teaches object-oriented programming to those who have learnt basic programming concepts and are ready to learn in-depth programming. It focuses on object-oriented programming using JAVA. The main concepts are Classes, Objects, Data Abstraction, Data Encapsulation, Overloading, Overriding, Polymorphism, Inheritance, Interfaces, Exception Handling, and Database Connectivity. This course also covers basic concepts for software design and reuse.</p>	
<p>Learning Outcome: On successful completion of this course, the students should be able to:</p> <p>CS1101.1. Develop Java Programs with the concepts of primitive data types, strings and arrays.</p> <p>CS1101.2. Develop Java Programs using Object Oriented Programming Principles such as Classes, Objects, Data Abstraction, Data Encapsulation, Overloading, Overriding, Polymorphism, Inheritance, and Interfaces.</p> <p>CS1101.3. Design, develop and debug programs in Core Java using coding and documentation standards.</p> <p>CS1101.4. Incorporate exception handling in Java Programs.</p> <p>CS1101.5. Use JDBC API connectivity in between Java Programs and database.</p>

Course Contents:

Basics of Java & Decision Statements - Introduction to Java: Features of Java, Byte Code and JVM, JDK, JRE; Data types and Operators: Lexical Tokens, Identifiers, Keywords, Literals, Comments, Primitive Datatypes, ADT, Operator types and precedence, Statements and Flow Control: Conditional statements, looping, return, etc., Abstract data types and their specification. How to implement an ADT. Concrete state space, concrete invariant, abstraction function.

Control Structures, Methods & Constructors - Object Oriented Programming in Java: Object Life-time & Garbage Collection.

Methods & Constructors - Constructor & initialization code block, Parameterized Constructor, Loops, Methods.

Array & String - Defining an Array, Initializing & Accessing Array, Multi –Dimensional Array, Operation on String, Mutable & Immutable String, Collection Bases Loop for String, tokenizing a String, Creating Strings using StringBuffer.

OOP's Concept I - Class Fundamentals, Object & Object reference, Access Control, Modifiers, Methods in Java: Method Declarations, Method Signatures, Invoking Methods,

OOP's Concept II - Static vs. Instance Data Fields, Static vs. Instance Methods, Method Overloading, Encapsulation.

Inheritance, Composition, and Aggregation, Invoking Base Class Constructors, Overriding vs. Overloading, Polymorphism Overloading.

Interfaces - Inner Class & Anonymous Classes, Abstract Class, Interfaces.

Exception Handling - Introduction to Exception handling.

JDBC Programming - The JDBC Connectivity Model, Database Programming: Connecting to the Database, Creating a SQL Query, Getting the Results, and Updating Database Data.

NOTE: Integrated Development Environments (IDEs) to be used in this Course are Eclipse or NetBeans – Both are compatible for Object Oriented Programming using Java.

Course Title and Code Critical Thinking and Storytelling CC1102

Hours per Week

L-T-P: 2-0-1

Credits

2

Students who can take

B. Tech Semester-II (Compulsory)

Course Objective:

The modern world offers confounding opinions and choices that need to be navigated judiciously. This course explores frameworks and processes to critically examine narratives, reconstruct them, and craft well-reasoned stories that can be told using impactful communication.

Course Outcomes:

On successful completion of this course, the student should be able to:

CC1102.1. Formulate intelligent questions to investigate.

CC1102.2. Evaluate information and argument for correctness, consistency, relevance and validity.

CC1102.3. Compose well-structured and well-reasoned arguments.

CC1102.4. Articulate and evaluate the impact of narratives.

CC1102.5. Distinguish between facts, assumptions and opinion.

Syllabus:

Introduction to Critical Thinking- Definitions of Critical Thinking, its applications and the methods to think critically. Paul & Elder model will be used.

Importance of questioning-The key to critical thinking is the ability to formulate intelligent questions. Students will be able to create, improve and prioritize their questions. They will be able to use different types of question by using Bloom's taxonomy to understand the root of any situation, problem or subject.

Examine data Critically-Students will be able to filter information, separate fact from opinion, identify cognitive biases and become aware of the ladder of inference. They will also be taught to conduct responsible research and basics of bibliography and citation.

Construct and reconstruct argument- Students will be taught to construct arguments with sound reasoning. They will be able to support their claims and opinions with compelling data and facts, and present well-informed arguments. Evaluate argument using logical fallacies.

Building a compelling Narrative- Stories that we create and narrate influence how we see ourselves and our association with others. The students will be able to observe, think, create and narrate their stories in an effective manner.

Course Title and Code Experimental Science: AS1101		
Hours per Week	L-T-P: 1-0-4	
Credits	3	
Course Objectives: This course is designed to familiarize the student with the fundamental concepts of different phenomenon related with optics, electrical & electronics, modern physics, properties of water and lubricants. This course will expose the students with experimental methods of physics, chemistry and integrates theoretical knowledge and concepts to practical experience.		
Course Outcome: On successful completion of this course, the students will be able to: AS1101.1. analyze ferromagnetic properties of any magnetic material and differentiate Soft and hard materials. AS1101.2. analyze thermoelectric effect of metal junctions due to temperature differences. AS1101.3. analyze nuclear radiation with respect to distance and thickness of absorbing media. AS1101.4. measure electrical properties e.g. specific resistance, time constant of various electrical components. AS1101.5. apply Schroedinger equation and quantum mechanical approach to analyze behavior of the quantum particle under different potentials. AS1101.6. determine the hardness of various water samples. And differentiate the hard and soft water. AS1101.7. analyze conductivity of different water samples by volumetric titrations and conductometric methods. AS1101.8. determine different properties of the lubricant/oil samples by Pensky-Martens and Red Viscometer instruments.

Students who can take	B. Tech Semester-II (Batch: 2021-2025)
Objective of the course: Students will be trained to work with various design and fabrication processes in order to shape materials and will be able to assemble the desired functional prototypes.	
Learning Outcomes: On successful completion of this course, the students should be able to: ES1112.1 Develop 3D model of the product using CAD software. ES1112.2 Identify various hand tools used for fabrication work. ES1112.3 Identify various machine tools used for fabrication work. ES1112.4 Select various tools and processes for manufacturing of any desired component.

Syllabus

3D Modelling (Software OnShape):

Introduction to software OnShape, 2D drawing commands, 3D Modelling command (extrude, revolve, sweep), Editing, command (hole, draft, fillet, chamfers), Patterns.

3D Assembly (Software OnShape):

Approach of assembly, assembly constraints, mechanisms.

Drafting (Software OnShape/AutoCAD):

Layout, view arrangements, dimensioning, annotation, bill of materials.

Materials:

- Types of materials generally used for fabrication work and their mechanical properties.
- Engineering uses of common metals and their alloys such as mild steel, aluminum, and other alloys.

Introduction to Workshop Practice:

- Workshop layout.
- Importance of various sections/shops of workshop.
- Types of jobs done in each shop.
- General safety rules and work procedure in workshop.

Introduction to Carpentry work :

- Applications and methods of using of carpentry tools- saw, planner, chisels, hammers, pallet, marking gauge, vice, try square, rule, etc.
- Types of woods and their applications.
- Demonstration of carpentry operations such as marking, sawing, planning, chiseling, grooving, boring, joining, etc.
- Preparation of wooden joints/ Demonstration.
- Safety precautions.

Introduction to Welding technique:

- Introduction to various welding processes like arc welding, gas welding, soldering, brazing.
- Demonstration of metal joining operations- arc welding, soldering and brazing.
- Demonstrate gas cutting operation.
- Preparation of metal joints/ Demonstration.
- Safety precautions.

Introduction to Machining:

- Introduction to various machine tools like lathe machine, drilling machine, etc.
- Demonstration of lathe machine tool.
- Demonstration of drilling machine.
- Preparation of specimen on various machine/ Demonstration.
- Safety precautions.

Introduction to Fitting work:

- Introduction to various tools like, work holding tools-bench vise, V-block with clamp and C-clamp.
- Introduction to fitting marking and measuring tools-marking table, surface plate, angle plate, universal scribing block, try-square, scribe, divider, centre punch, letter punch, calipers, vernier caliper, etc.
- Introduction to various fitting cutting tools, hacksaw, chisels, twist drill, taps, files, dies, etc.
- Introduction to various other tools like fitting finishing tools-files, reamers, tools-hammer, spanners, screw drivers sliding screw wrench.
- Demonstration of various fitting operations such as chipping, filing, scraping, grinding, sawing, marking, drilling, tapping.

- Preparation of simple product/ Demonstration.
- Safety precautions.

Introduction to 3D Printing

- Introduction to 3D printing machine,
- Introduction to types of materials used for 3D printing.
- Preparation of simple product/Demonstration.
- Safety precautions.

Introduction to Laser Cutting

- Introduction to laser cutting machine,
- Introduction to types of materials used for laser cutting.
- Preparation of simple product/Demonstration.
- Safety precautions.

Hours per Week		L-T-P: 3-0-2
Credits		4
Students who can take		B.Tech. Semester III (2020-2024) (CSE+EEE)
Course Objective: This course aims to develop understanding for Design, Analysis, and implementation of data structures and algorithms to solve computational problems using an object-oriented programming language. This course builds upon the first-year course on object-oriented programming and lays the foundation for the course on Design and Analysis of Algorithms.		
Course Outcome:		
On successful completion of this course, the students should be able to:		
CS1102.1 Write programs for performing basic operations like insertion, deletion, searching, sorting, merging, traversal etc. on various data structures like array, queue, stack, linked list, tree, graph.		
CS1102.2 Use and design appropriate data structures for solving a variety of computational problem.		
CS1102.3 Develop test cases for their programs and debug the code.		
CS1102.4 Analyze the algorithms in terms of asymptotic time and space complexity.		
CS1102.5 Implement and compare various searching and sorting algorithms		
CS1102.6 Convert a recursive algorithm to non-recursive algorithm.

Syllabus (Theory)

Unit I: Introduction to linear Data Structures: Types of Data Structures - Linear & Non-Linear Data Structures. Linear Structures: Arrays: Types, Operations and applications (searching sequential and binary, Sorting: bubble, Insertion,

Selection, Quick and Merge sorting algorithms for different characteristics of input data. Complexity analysis, Comparison of sorting algorithms in term of complexity-time and space.

Unit II: Stacks and Queues: Operations and Applications, conversion of expression from one form to other form using stack (with & without parenthesis), Evaluation of expression in infix, postfix & prefix forms using stack, Queues: Operations and Applications, Circular Queues: Operations and Applications, De-queue and Priority queue, Recursion.

Unit III: Linear linked lists: Singly, doubly and circularly connected linear linked lists insertion, deletion at/ from beginning and any point in ordered or unordered lists, Application of linked list for polynomial operations, Comparison of arrays and linked lists as data structures. Implementation of stack, and queue, Algorithms for/of insertion, deletion of stack, and queue implemented using linked list data structure.

Unit IV: Trees: Trees definition, characteristics concept of child, sibling, parent child relationship etc., binary tree: different types of binary trees based on distribution of nodes, threaded binary tree and its application, insertion, deletion and traversal of binary trees, constructing binary tree from traversal results, BST tree: Concept of BST, insertion into and deletion from BST, Height balanced tree: AVL and its operations, Application of trees for representation of sets, Splay Tree and its operation.

Unit V: Graphs: Definition, Relation between tree & graph, directed and undirected graph, representation of graphs using adjacency matrix and list, Depth first and breadth first traversal of graphs, finding connected components and minimum spanning tree- Kruskal and Prims, Dijkstra Algorithm.

Indexing and Hashing: Hashing: The symbol table, Hashing Functions, Collision Resolution Techniques.

Syllabus (Lab):

All programs must be written and implemented in JAVA.

Data Structures Lab:

1. Write a program to search an element in the Array using Linear Search.
2. Write a program to implement Binary Search in an Array.
3. Write a program to insert an element in the given Array.
4. Write a program to delete an element in the given Array.
5. Write a program to merge two Arrays into single Array.
6. Write a program to merge two sorted Arrays into one sorted Array.
7. Write a program to search an element in the Array using Iterative and Recursive Binary Search.
8. Write a menu driven program to implement QUEUE using Arrays that performs following operations
(a) INSERT (b) DELETE (c) TRAVERSAL (d) PEEP (e) ISFULL (f) ISEMPY
9. Write a menu driven program to implement Circular Queue using Arrays that performs following operations.
(a) INSERT (b) DELETE (c) DISPLAY (d) PEEP (e) ISFULL (f) ISEMPY
Write a menu driven program to implement a program for Stack that performs following operations using Array.

- (a)PUSH (b) POP (c) PEEP (d) DISPLAY (e) ISFULL (f) ISEMPY
10. Write a program to convert infix notation to postfix notation using Stack.
 11. Write a program to convert infix notation to prefix notation using Stack.
 12. Write a program to evaluate given postfix notation using Stack.
 13. Write a menu driven program to implement following operations on the singly Linked List.
 - a) Insert a node at the front of the Linked List.
 - b) Insert a node at the end of the Linked List.
 - c) Insert a node such that Linked List is in ascending order. (according to info. Field)
 - d) Delete a first node of the Linked List.
 - e) Delete a node before specified position.
 - f) Delete a node after specified position.
 - g) Traversal of Linked List
 14. Write a menu driven program to implement Stack using Linked List.
 15. Write a menu driven program to implement Queue using Linked List.
 16. Write a program to implement following operations on the doubly Linked List.
 - a) Insert a node at the front of the Linked List.
 - b) Insert a node at the end of the Linked List.
 - c) Delete a last node of the Linked List.
 - d) Delete a node before specified position.
 - e) Traversal of Linked List
 17. Write a program to implement following operations on the circular Linked List.
 - a) Insert a node at the end of the Linked List.
 - b) Insert a node before specified position.
 - c) Delete a first node of the Linked List.
 - d) Delete a node after specified position.
 - e) Traversal of Linked List
 18. Write a program which create Binary Tree.
 19. Write a program to implement recursive and non-recursive Binary Tree traversing methods in-order, pre-order and post-order traversal.
 20. Write a menu driven program to implement Binary Search Tree and its Traversal.
 21. Write a menu driven program to implement AVL Tree and its Traversal.
 22. Write a program to implement Breadth First Search in a given Graph.
 23. Write a program to implement Depth First Search in a given Graph.
 24. Write a program to check whether the given Graph is cyclic or not.
 25. Write a program to implement Kruskal's Algorithm for the given Graph.
 26. Write a program to implement Prim's Algorithm for the given Graph.
 27. Write a program to implement Dijkstra's Algorithm for the given Graph.
 28. Write a program to implement Bubble Sort, Selection sort, Insertion Sort in an Array.
 29. Write a program to implement Merge Sort in an Array.
 30. Write a program to implement Quick Sort in an Array.

Credits	5	
Students who can take	B.Tech. Sem III (All)	
Course Objective This course introduces the concepts of Ordinary Differential Equations (ODE), Functions of Complex variables and Laplace transform in the context of engineering applications. Civil, mechanical & electrical systems will be modeled and analyzed w.r.t forces and stability. Appropriate numerical methods and simulation tools will also be used.		
Course Outcomes: On successful completion of this course, the students will be able to: ES1106.1. Solve ordinary differential equations through various techniques. ES1106.2. Determine the structural behavior of the body by determining the stresses, strains produced by the application of load. ES1106.3. Analyze the concept of buckling and be able to solve the problems related to column and struts. ES1106.4. Model the problems of column and struts mathematically in terms of ordinary differential equations and solve them using the appropriate method. ES1106.5. Simulate the solutions of the above mentioned models of columns and struts. ES1106.6. Analyze a function of complex variables in terms of analyticity, poles and zeroes. ES1106.7. Find Laplace transform and inverse Laplace transforms of given function and use Laplace transform to solve ordinary differential equations. ES1106.8. Design and Evaluate the LC, RC & RL Networks using Foster's and Cauer Forms. ES1106.9. Analyze stability criteria for electrical network using pole zero plot and routh-hurwitz polynomials. ES1106.10. Model and simulate electrical networks using open source simulator/ Virtual lab.

Syllabus

ODE : Ordinary differential equations of first order and first degree, higher order ODEs with constant coefficients, Differential equation of second order with variable coefficients, Numerical solution of ODEs.

Applications of ODE in structural analysis : column and struts - Definitions, Classifications, Assumptions made in the Euler's Column Theory, Expressions for crippling load of different cases like both the ends are hinged or pinned, one end is fixed and other is free, both ends are fixed, one end is fixed other is hinged, Effective length of column, Slenderness ratio, Crippling stress in terms of Effective length and radius of gyration, limitations of Euler's Formula, Rankine's Formula, Eccentric loading, Johnson's Formula for Columns, both straight line and parabolic formula for columns.

Functions of Complex variables : Complex numbers, complex conjugates, functions of complex variables, real and imaginary parts of a complex function, analytic functions, C-R equations, Poles and zeros of a complex function, Taylor's theorem and Taylor's expansion.

Laplace transform: Basic Laplace transform and inverse Laplace Transforms, solution of ODEs using Laplace transform, solution of system of ODEs using Laplace transform.

Network Functions : Concept of complex frequency, transform independence, network functions of one and two port network, concepts of poles and zeros, properties of driving point and transfer functions, time response stability from pole zero plot, Routh-Hurwitz polynomials.

Network Synthesis: Positive real functions, Basic syntheses procedure, method of syntheses, driving point syntheses of one port network (R-L and R-C and R-L-C).

Transient Analysis: Modeling of Mechanical, electrical and heating systems, equivalent circuits of R, L and C elements. Complete response of RL, RC, and RLC circuits to step, sinusoidal, exponential, ramp, impulses and the combinations of excitations. Initial value and final value theorem.

Course Title and Course Code	Engineering Measurements and Machines (ES1107)	
Hours per Week	L T P: 3 0 4	
Credits	5	
Students who can take	B. Tech Semester-III	
Course Objectives:		
The aim of this course is to impart the knowledge of mechanical and electrical machine used in industries. Students will learn the fundamental of engineering principles governing the engineering process in real-world. Students will get the knowledge of sensors, actuators and their selection process for any industrial application. This course complement the first year course Fundamentals of Automation Engineering to lay the foundation for further courses in IoT areas.		
Course Outcomes:		
On successful completion of this course, the students be able to:		
ES1107.1 Evaluate suitable electrical and non-electrical instruments for measuring physical quantities.		
ES1107.2 Explain and Analyze the working of some important mechanical and electrical machine.		
ES1107.3 Integrate the sensors for monitoring and automation of electrical and mechanical systems.		
ES1107.4 Use electro-mechanical machines for different applications.

Syllabus (Theory):

Unit-I: Measurement, Instrumentation and Calibration

Introduction, measuring units, elements of measuring systems, applications of measurement and instrumentation, instruments types and performance characteristics, error in

measurements, calibration and standards, Measuring instruments, Digital meters, Bridges, Electronic Instruments.

Unit-II: Transducers

Classification of transducers, Selection of transducers, measurement of physical quantities, Elements of data acquisition system, Smart sensors, Introduction to MEMS.

Unit-III: Transformers

Construction, principle of operation, equivalent circuit, losses, testing, efficiency and voltage regulation, auto transformer, three phase connections, parallel operation of transformers, tap changing.

Unit-IV: Rotating Machines

DC Machines

Construction, EMF and torque equation, circuit model, characteristics of generators, characteristics of motors, starting and speed control.

Induction Motors: Construction, working principle, classification and applications, equivalent circuit, starting and Speed control of induction motors.

Unit-V: Mechanical Machines

Turbines: Introduction to steam turbines, Impulse and Reaction turbines, turbine power and related calculations.

Pumps: Introduction of pumps, centrifugal pumps, working of centrifugal pumps, Cavitation and its effect on pump, working of reciprocating pumps, Application of pumps in industries.

Power Transmission Systems: Mechanical drives and their performance analysis.

List of Experiments:

Measurement

1. To study the data sheet and recognise the static characteristics.
2. To study the appliances standards in India.
3. Measurement of voltage, current and power in a circuit.
4. Measurement of pressure.
5. Measurement of resistance.
6. Measurement of inductance.
7. Measurement of capacitance.
8. Calibration of single phase energy meter.
9. Measurement of displacement.
10. Measurement of temperature.
11. Measurement of flow.
12. Measurement of horizontal and vertical angles using Theodolite.

Mechanical Machines

13. To study the performance of turbines used in steam power plant.
14. To study the performance of belt drive system used for power transmission.

Electrical Machines

15. To perform Ratio, Polarity and Load test on a single-phase transformer.
16. To perform open circuit and Short circuit test on a single-phase transformer.
17. Speed control of DC shunt motor.
18. Starting and reversal of 3-phase Induction motor.

EE1101	Electronic Devices and Circuits	3	0	2	0	4
--------	---------------------------------	---	---	---	---	---

Course Objectives: This course is designed to disseminate knowledge of semiconductor devices and circuits for switches, regulators, LED, Solar cells, amplifiers, etc. This course also focusses on developing two port networks using various parameters and analyzes their characteristics.

Course Outcomes:

On successful completion of this course, the students should be able to:

- EE1101.1. Analyse characteristics of electronic components, devices and circuits
- EE1101.2. Apply electronic devices and circuits to various engineering applications
- EE1101.3. Design and analyse different amplifier configurations
- EE1101.4. Analyse input-output characteristics of a given complex network
- EE1101.5. Design efficient power amplifiers with least harmonic distortion

Syllabus (Theory):

Introduction to Semiconductor Physics: Review of Quantum Mechanics, Electrons in periodic lattices, E-k diagrams. Energy bands in intrinsic and extrinsic silicon; Carrier transport: diffusion current, drift current, mobility and resistivity; sheet resistance, design of resistors, Generation and recombination of carriers; Poisson and continuity equation

P-N junction characteristics, I-V characteristics, and small signal switching models; Avalanche breakdown, Zener diode, Schottky diode, LED, solar cells

Bipolar Junction Transistor and FET, I-V characteristics, Biasing of BJT for optimum power consumption, BJT as switch and amplifier, Frequency response of amplifiers, Multistage amplifiers, MOS capacitor, C-V Characteristics, MOSFET, I-V characteristics, and small signal models of MOS transistor, Different configurations of MOS amplifier

Power amplifier: Various classes of operation (Class A, B, AB, C), their power efficiency and linearity issues, Design applications of power amplifier to obtain best efficiency and least harmonic distortion

Two port parameters: Admittance, impedance, hybrid and transmission parameter of two port networks, Conversion of one parameter to another parameter, Series, parallel and cascade connection of two port networks, Condition of reciprocity & symmetry, Iterative and Image Impedance

Syllabus (LABORATORY):

1. V-I characteristics of Reverse Biased PN junction diode
2. V-I characteristics of Forward Biased PN junction diode
3. V-I characteristics of Zener diode
4. Zener diode as a voltage regulator
5. V-I characteristics of LED
6. Input & Output characteristics of BJT Common Emitter configuration
7. Input & Output characteristics of BJT Common Base configuration
8. Frequency Response of Common Emitter amplifier
9. Drain and Transfer characteristics of FET Common Source configuration
10. Frequency Response of Common Source FET amplifier

Course Title and Code:	Perspectives on Contemporary Issues - CC1103
Hours per Week	L-T-P: 2-0-1
Credits	2
Students who can take	B.Tech-BCA Sem III

Course Objective-

In an era of globalization, there is an increasing need for the youth to be able to empathize with others, value diverse perspectives and cultures and understand how events around the world are intertwined. Global issues revolve around social, economic and environmental factors which ultimately add to the interconnectedness of countries. In this course, students will employ key critical thinking concepts to analyze contemporary issues from multiple perspectives. They will explore the impact at micro and macro levels.

Course Outcome :

On successful completion of this course, the students should be able to:

CC1103.1: Identify different perspectives objectively.

CC1103.2: Explain interconnectedness of the issues and their impact at micro and macro levels.

CC1103.3: Recognize their own beliefs, biases, claims and assumptions.

CC1103.4: Evaluate sources, argue and defend effectively.

Retest

1	Theory Exam	30
---	-------------	----

Syllabus (Theory):

Research, analysis & evaluation of a topic from local, national and global perspectives.

➤ **Globalization**

With increasing development throughout the world, the focus of this theme will be on the impact of adopting policy of neoliberalism globally. Changes in India after implementation of new economic policy of 1991.

➤ **Poverty and Inequality**

What do you mean by wealth & equality? Is it enough to ascribe monetary values to human lives? Who has benefited from an increased access to resources, labour & capital due to globalisation? Which groups are historically marginalised & suffer from unequal access to opportunities

➤ **Social justice and human rights**

An understanding of the impact of inequality and discrimination, the importance of standing up for our own rights and our responsibility to respect the rights of others.

➤ **Climate Change and Sustainability**

Understanding the magnitude of the issue, its impact and future challenges. How we can meet our current needs without diminishing the quality of the environment or reducing the capacity of future generations to meet their own needs.

➤ **Technology**

Impact of unprecedented technological growth, challenges and opportunities. Is technocracy a boon or a bane?

Course Title and Code:	Management Perspectives IL1101
Hours per Week	L-T-P: 2-0-0
Credits	2
Students who can take	B.Tech Sem-III (All branches)

Course Objective- The present course is an introductory and integrative action encapsulated course designed for the engineering students to introduce them to management discipline and the core functional areas contributing to it. This course adopts the integrated problem oriented approach via the use of cases and simulation. It implies that complex business problems, in the form of cases and simulations require students to understand different dimensions of the problem and come up with holistic solutions. The course will help students to be familiar with trending management issues and at the same time apply the knowledge gained.

Course Outcome:

On successful completion of this course, the students should be able to:

IL1101.1: Comprehend the importance of management and its functional areas in businesses and its interaction with technology.

IL1101.2: Highlight specific external and internal issues impacting businesses.

IL1101.3: Integrate and analyze multiple dimensions of management aspects to solve business problems.

IL1101.4: Evaluate the aspects that management might consider when evaluating technical and engineering projects such as planning and scheduling, personnel management, cost control etc. from a management perspective

Syllabus (Theory):

HR

1. Business organization- Current challenges
2. HR and its growing importance.
3. Overview of people management systems

4. Recent trends shaping HR.

Marketing:

1. Marketing Process
2. Elements of Marketing Mix
3. Segmentation, Targeting and Positioning

Finance and Accounts:

1. Understanding Accounting Terms
2. Overview of Financial Reports, viz., Balance Sheet, Income Statement, Cash Flow Statement
3. Interface of Balance Sheet and Income Statements
4. Types of Costs and assessing and ascertaining Costs
5. Financial Statement Analysis

Course Title and Code Computational Engineering Analysis–II: ES1109		
Teaching Scheme	L-T-P: 3-1-2	
Credits	5	
Students who can take	B. Tech Sem IV	
Course Objective		
This course introduces the concepts of Partial Differential Equations (PDE), Fourier transform and Z- transform in the context of engineering applications. Mechanical & electrical systems will be modeled and analyzed w.r.t forces and stability. Appropriate numerical methods and simulation tools will also be used.		
Course Outcomes: On successful completion of this course, the students will be able to:		
ES1109.1. Solve partial differential equations and boundary value problems through various appropriate techniques.		
ES1109.2. Formulate and analyze differential equations especially Navier stokes and energy equations and use numerical methods for solving the same.		
ES1109.3. Use Numerical method for solving partial differential equations using finite difference method.		
ES1109.4. Compute Fourier transform and inverse Fourier transforms of given functions and use Fourier transform to solve Partial differential equations.		
ES1109.5. Find Z-transform and inverse Z-transforms of given functions and use them to analyze control systems.		
ES1109.6. Design and analyze various types of filters and attenuators to minimize power losses and improve signal quality.		
ES1109.7. Model and simulate electrical networks using open-source simulator/Python package/Virtual lab

Course Syllabi (Theory):

PDE : Partial Differential Equations of first order, classification of PDEs, solution of linear and non-linear PDEs, second order PDEs and their classification, variable separable technique for solving PDE. Heat equation, wave equation, Laplace equation

Boundary value problems: Solution of boundary value problems using separation of variables technique.

Numerical solution of PDE.

Application of PDE: Momentum and Energy Transport:

Energy equation, boundary conditions, steady and transient heat conduction, Numerical method in heat conduction, Finite difference formulation, one dimensional steady heat conduction, two-dimensional steady heat conduction and transient heat conduction.

Fourier Transforms : Introduction to Complex Fourier Transform, Fourier sine transform and Fourier cosine transform, Fourier transform and inverse Fourier transform of various functions, properties of various Fourier transforms, Applications in solving Boundary value problems.

Filter Circuits: Types of passive filters, design low-pass, High-pass, Band-pass, Band-reject filters as constant k type, design low-pass, High-pass, Band-pass, Band-reject filters as m-derived type, Advantages of active filters over passive filters.

Graph Theory : Introduction, Linear graph of a network, Tie-set and cut-set schedule, incidence matrix, cut-set, and tie-set. Graph theory application to a practical radial system.

Z-transform : Introduction, standard z- transform, properties of z – transform, initial and final value theorems, inverse z-transform, applications in control systems.

Course Title and Code: Electromagnetics and Microwaves EE1104		
Hours per Week	L-T-P: 3-0-2	
Credits	4	
Students who can take	B. Tech Sem IV	
<p>Course Objectives: This course aims to develop understanding of fundamental concepts of electromagnetic wave propagation in guided medium. The course further develops understanding of microwave network theory, passive devices and microwave generators. Important properties and applications of various microwave components like klystrons, magnetrons, couplers, circulators, and isolators are emphasized.</p>		
<p>Course Outcomes: On successful completion of this course, the students will be able to:</p>		
EE1104.1. Analyze static electromagnetic field in cables, coils, etc., used in electric power transmission circuits.		
EE1104.2. Analyze fluctuating electromagnetic fields in different medium, e.g., linear and isotropic medium using Maxwell's equations.		
EE1104.3. Analyze characteristics of EM waves under time varying potentials and polarization of EM waves due to different mode of transmission.		
EE1104.4. Analyze wave propagation through different transmission lines and plane electromagnetic waves in homogeneous media.		
EE1104.5. Analyze the amount of electromagnetic noise generated by a device and test Electromagnetic compatibility (EMC) and electromagnetic interference (EMI).		
EE1104.6. Design and Analyze SWR, cutoff frequency, guide wavelength, etc and Characterize microwave junctions like tees		
EE1104.7. Design and Characterize microwave corner, bends & twists and directional couplers, isolators, circulators, and attenuators		
EE1104.8. Analyze the applications of microwave generators like klystrons & magnetrons		
Prerequisites: (optional)

Syllabus (Theory)

UNIT I: Introduction

Revision of vector calculus– Scalars and Vectors – Different co-ordinate systems-vector calculus – Divergence theorem – Stoke’s theorem

UNIT II: Time Varying Fields and Maxwell’s Equations

Faraday’s laws, induced emf – Transformer and motional EMF–Forces and Energy in quasi-stationary Electromagnetic Fields - Maxwell’s equations (differential and integral forms) – Displacement current – Relation between field theory and circuit theory

UNIT III: Electromagnetic Waves

Generation – Electro Magnetic Wave equations – Wave parameters; Waves in free space, lossy and lossless dielectrics, conductors-skin depth, Poynting vector – Plane wave reflection and refraction

UNIT IV: Transmission Structures and Resonators

Transmission Line equation, Characteristic impedance, losses in transmission line, reflection coefficient, standing wave ratio, Smith Chart, Impedance matching, Rectangular Waveguides – TE/TM mode analysis, Characteristic Equation and Cut-off Frequencies, Circular Waveguides- Nature of Fields, Characteristic Equation, Dominant and Degenerate Modes

UNIT V: Microwave Network Theory and Passive Devices

Scattering matrix - Microwave junctions -Tee junctions -Magic Tee - Rat race - Corners - bends and twists - Directional couplers -two hole directional couplers- Ferrites - important microwave properties and applications– Termination - Gyrator- Isolator-Circulator – Attenuator

UNIT VI: Microwave Generators

Transit-time effect, Limitations of conventional tubes, Two-cavity and multi-cavity Klystrons, Reflex Klystron, TWT, Magnetrons

Syllabus (Practical):

1. Set up Microwave components and instruments (X band Test Bench)
2. Characterize Reflex Klystron
3. Microwave Test Bench Measurement of guide wavelength, cut off frequency, SWR (X band)
4. Measurement of an unknown Load Impedance
5. Characterize Gunn diode oscillator
6. Characterize and Analyse Magic Tee junction
7. Characterize and Analyse Isolators, Circulators and Couplers
8. Characterization and measurement using the Horn Antenna
9. Designing transmission lines and microstrip patches using CST software
10. Designing microstrip patch antenna using CST and MATLAB

Course Code and Title	EE1105: Signals and Control Systems	
Scheme	L T P: 3 0 4	
Credits	5	
Students who can take	B. Tech: Semester IV	
Course Objective: To develop an understanding of signals, systems, and control concepts with focus on mathematical model formulation, stability analysis, simulation, and industrial applications.		
Course Outcomes:		
On successful completion of this course, the students will be able to:		
EE1105.1. Identify and differentiate signals, systems, and their properties.		
EE1105.2. Evaluate Fourier, Laplace, and z-transform for continuous and discrete time systems.		
EE1105.3. Apply properties like symmetry, time scaling, time shifting, frequency shifting, time differentiation, time integration, time convolution, frequency convolution, inverse transform on continuous and discrete signals.		
EE1105.4. Design open loop or closed loop control system of mechanical, electrical, thermal, chemical, or analogous systems.		
EE1105.5. Convert linear system to discrete system through sampling.		
EE1105.6. Solve the control system using block diagram reduction method and Mason's gain formula.		
EE1105.7. Perform the error analysis on the system.		
EE1105.8. Evaluate the stability of the system and effect of parameter variation on the stability using pole-zero location method, Routh-Hurwitz criterion, and root locus technique.		
EE1105.9. Analyse the control system in frequency domain and time domain.		
EE1105.10. Frequency analysis plots viz. Bode plot, Polar plot, and Nyquist Plot.		
EE1105.11. Improve a system as per design and equipment standards keeping energy efficiency in consideration.		
Prerequisites	Mathematics concepts related to Fourier transform, Laplace transform, and Z-transform.

COURSE SYLLABUS (Theory):

UNIT I: SIGNALS AND SYSTEMS

Basic concepts, mathematical form, classification of signals, signal transformations, continuous and discrete signals, energy and power, basic system properties, classification of systems.

UNIT II: FOURIER, LAPLACE, AND Z-TRANSFORM FOR CONTINUOUS AND DISCRETE TIME SYSTEMS

Evaluation, properties and theorems: symmetry, time scaling, time shifting, frequency shifting, time differentiation, time integration, time convolution, frequency convolution, inverse transform. Converting from continuous time to discrete. Mathematical representation of sampling. Sample and hold. Aliasing.

UNIT III: INTRODUCTION TO CONTROL SYSTEMS

Definition of the elements in a control loop. Open and closed loop systems. Linear time invariant systems: Transfer function, state variable representation. Block diagram reduction techniques, signal flow graphs. Mason theorem. Standards: ISA 5.1 – Instrument symbols and identification. ISA 20 – Instrumentation specification forms.

UNIT IV: TIME AND FREQUENCY DOMAIN ANALYSIS

Test signals, transient and steady state response, specifications, steady state error. BIBO-stability, Routh-Hurwitz criterion. Basic properties of root locus. Introduction to frequency response and specifications. Stability analysis using Bode and Nyquist plots.

UNIT V: INTRODUCTION TO CONTROLLER AND FILTER DESIGN

PID, Low/High pass filters, Lead/Lag, state feedback.

UNIT VI: PROJECT

Application of signals and control systems theory to sustainability problems: health, energy, water, smart cities, etc.

Syllabus (Practical)

1. Introduction to Python, Numpy and Scipy for signal processing
2. Signal convolution, frequency analysis and filtering using Python libraries
3. Introduction to MATLAB Computing Control Software.
4. Defining Systems in TF, ZPK form, and (a) Plot step response of a given TF and system in state-space. Take different values of damping ratio and ω_n natural undamped frequency (b) Plot ramp response.
5. To design 1st order R-C circuits and observes its response with the following inputs and traces the curve.
 - Step
 - Ramp
 - Impulse
6. To design 2nd order electrical network and study its transient response for step input and following cases.
 - (a) Under damped system

- (b) Over damped System.
- (c) Critically damped system
- 7. To Study the frequency response of following compensating Networks, plot the graph and final out corner frequencies.
 - (a) Leg compensation Network
 - (b) Lead compensation Network
 - (c) Leg-lead compensation Network.
- 8. To study the Potentiometer error detector.
- 9. To draw the speed-torque characteristics of a.c. servomotor.
- 10. To Study the bode plot for a 2nd order system and find GM and PM.
- 11. To study and design of P, PI and PID controllers.
- 12. To study and draw the characteristics of stepper motor.

Course Title and Code: Communication and Identity CC1104		
Hours per Week	L-T-P: 2-0-1	
Credits	2	
Students who can take	B.Tech/BCA/BBA/B.Des Semester- IV	
<p>Course Objectives: This course enables students to explore their identities to mark their distinctive presence in professional spaces. It intends to help them gain an understanding of the basic purpose, benefits, and responsibilities of self-presence, and to begin the process of defining their values, strengths, and goals, which helps them enhancing their employability skills through exposing themselves through various activities.</p>		
<p>Course Outcomes: On successful completion of this course, the students should be able to: CC1104.1 Analyze their personal identities by identifying their personal attributes, values, strengths and vision statement. CC1104.2 Articulate their personal statement and use it to craft an influential pitch. CC1104.3 Express themselves professionally on various social media platforms. CC1104.4 Write a well-structured professional business document.</p>

Course Topics

Module(s)	Topics to be covered
Identifying Self	Discovering Identities: Words That Describe Me, Your Personal Identity, A Portrait of Yourself, Personal Identity Wheel, Self-Awareness from five aspects that influence our identity - Personal Attributes, Value and Principles, Emotional Awareness, Tendencies and Habit, Needs Assessment.
	Personal Branding: Meaning, Importance and how to create and use it; Identify, Build and Market your brand story.
Persuasive Communication	Personal Brand Statement, Resume, Cover Letter and The Elevator Pitch, Presence in Group Discussion and Personal Interviews
	Online Brand Communications- Creating an online presence for professional branding on social media platforms (LinkedIn, Facebook, Instagram, etc)
	Writing a well-structured and effective business documents (Agenda, Minutes of the meetings (MoM) Emails, Executive Summary)

Referred MOOCs –

Course Name- Introduction to Personal Branding

Course duration - approx. 7 hours

Offered by University of Virginia

<https://www.coursera.org/learn/personal-branding>

Course Name- Digital Footprint (If I Googled you, what would I find?)

Course duration - approx. 9 hours

Offered by The University of Edinburgh

<https://www.coursera.org/learn/digital-footprint>

Course Name- High Impact Business Writing

Course duration - approx. 7 hours

Offered by University of California, Irvine

<https://www.coursera.org/learn/business-writing>

Course Title and Code: Introduction to Design IL1102		
Hours per Week	LTP: 0 0 2	
Credits	2	
Students who can take	2nd Year B. Tech	
Course Objective:		
To provide understanding of design process using critical thinking for developing a prototype from idea nucleation to a demonstrable product.		
Course Outcome:		
On successful completion of this course, the students should be able to:		
IL1102.1.	Apply the design process for developing a product.	
IL1102.2.	Apply techniques to demonstrate the conceptual design.	
IL1102.3.	Critically solve-problems through hands-on and activity-based projects.

Course Contents:

Unit 1: Design Process

Introduction to Design Process.

Developing creative thinking and brainstorming from individual level to a team level.

Engineering materials for model making – wire, clay, wood, etc.

Joining and assembly process like Mortise and Tenon, Dowel Joints, etc.

Unit 2: Sketching and Technical Drawing

Hardware and software tools for model making.

Basic drawing and visualization skills including 2D to 3D - Form exploration.
Principles of animation (basic sketching and CAD modeling).

Unit 3: Documentation

Technical aspects of animation and film making (Frame rate, persistence of vision).
Building a Narrative – Start, Middle and End of a story.
Mediums of animation.

Evaluation Scheme for Retest		
1	Theory Exam-III	30
2	Lab Evaluation-II	10
	Total	40

Syllabus (Theory):

1. Introduction to International Standards Organization (ISO), International Telecommunications Union - Telecommunications Sector (ITU-T), Institute of Electrical and Electronics Engineering (IEEE), American National Standards Institute (ANSI) for Analog and Digital Communication
2. Review of signals and systems, Frequency domain representation of signals, Principles of Amplitude Modulation Systems - DSB, SSB and VSB modulation. Angle Modulation, Representation of FM and PM signals
3. Spectral characteristics of angle modulated signals, Gaussian and white noise characteristics, Noise in amplitude modulation systems, Noise in Frequency modulation systems, Pre-emphasis and De-emphasis, Threshold effect in angle modulation
4. Pulse modulation, Sampling process, Pulse Amplitude and Pulse code modulation (PCM), Differential pulse code modulation, Delta modulation, Noise considerations in PCM, Time Division multiplexing, Digital Multiplexers
5. Elements of Detection Theory, Optimum detection of signals in noise, Coherent communication with waveforms - Probability of Error evaluations, Baseband Pulse Transmission - Inter Symbol Interference and Nyquist criterion, Pass band Digital Modulation schemes - Phase Shift Keying, Frequency Shift Keying, Quadrature Amplitude Modulation, Continuous Phase Modulation and Minimum Shift Keying
6. Digital Modulation tradeoffs, Optimum demodulation of digital signals over bandlimited channels - Maximum likelihood sequence detection (Viterbi receiver), Equalization Techniques, Synchronization and Carrier Recovery for Digital modulation

Syllabus (Practical):

1. MATLAB code for Amplitude modulation and demodulation
2. MATLAB code for DSB-SC modulation and demodulation
3. MATLAB code for SSB- SC modulation and demodulation
4. MATLAB code for Frequency modulation and demodulation
5. MATLAB code for PN sequence generation
6. MATLAB code for BASK (OOK) modulation and demodulation
7. MATLAB code for BFSK waveform generation and demodulation
8. MATLAB code for BPSK waveform generation and demodulation
9. MATLAB code to generate QPSK waveform for a given binary sequence
10. MATLAB code for BER of BASK(OOK) modulation scheme under AWGN
11. MATLAB code for plotting BER of BFSK under AWGN channel
12. MATLAB code for BER of BPSK and QPSK modulation scheme under AWGN

Course Code	Course Title	Teaching Scheme				
		S				Credits
EE1102	ANALOG CIRCUITS	3	0	2	0	4
Course Objectives: The course aims to develop understanding about working of analog circuits and learn to develop their applications.						
Learning Outcomes: On successful completion of this course, the students should be able to:						
EE1102.1	Explain electrical characteristics of op-amps and their open loop configurations.					
EE1102.2	Design inverting, noninverting, and differential amplifiers.					
EE1102.3	Find out frequency response, stability, transient response, bandwidth, maximum output voltage, and other important parameters of an op-amp with and without feedback.					
EE1102.4	Analyze and design summing and differential amplifiers, voltage to current converters, low voltage dc voltmeters, low voltage ac voltmeters, zener diode testers, light-emitting diode testers, and integrator and differentiator circuits.					
EE1102.5	Design and analyze filters and oscillators viz., low-pass filters, high-pass filters, band- pass filters, band-reject filters, Phase shift oscillators, Wien bridge oscillators, quadrature oscillators, square wave generators, triangular wave generators, and sawtooth wave generators.					
EE1102.6	Fabricate and design some op-amp based devices such as power supplies, audio function generators, LED temperature indicators, dc motor speed controllers, appliance timers, sirens/alarms etc.					
EE1102.7	Test the performance of different circuits as per IEEE, IEC, ISO and other standards.

	Total (30)				30	
Syllabus:						

UNIT I: Feedback topologies

Voltage series, current series, voltage shunt, current shunt, effect of feedback on gain, bandwidth etc., calculation with practical circuits, concept of stability, gain margin and phase margin.

UNIT II: Oscillators

Review of the basic concept, Barkhausen criterion, RC oscillators (phase shift, Wien bridge etc.), LC oscillators (Hartley, Colpitt, Clapp etc.), non-sinusoidal oscillators

UNIT III: Differential amplifier

Basic structure and principle of operation, calculation of differential gain, common mode gain, CMRR and ICMR. OP-AMP design: design of differential amplifier for a given specification, design of gain stages and output stages, compensation. OP-AMP applications: review of inverting and non-inverting amplifiers, integrator and differentiator, summing amplifier, precision rectifier, Schmitt trigger and its applications.

UNIT IV: Active filters

Low pass, high pass, band pass and band stop, design guidelines; Digital-to-analog converters (DAC): Weighted resistor, R-2R ladder; Analog to-digital converters (ADC): Single slope, dual slope, successive approximation, flash etc.

UNIT V: Design and Standards

Projects using Linear Integrated circuits for minimum power consumption as well as low cost.

Familiarize with 1801-2013 - IEEE Standard for Design and Verification of Low-Power Integrated Circuits.

Projects:

Project 1: Function generator (sine, triangular, square wave form of various frequencies using oscillators and filters).

Project 2: Instrumentation amplifier design to interface pH sensor, thermistor, flexible tactile sensor for use in IoT projects.

Course Title and Code:	Understanding and Managing Conflict CC1105
Hours per Week	L-T-P: 2-0-0
Credits	2
Students who can take	B.Tech - Sem V

Course Objective-

In today's increasingly complex and fragmented world, it is important to be able to resolve conflicts and build healthy relationships. Understanding and Managing Conflict is a course designed to prepare students to identify conflicts, manage emotions, analyze the situation and characters, and practice different frameworks to deal with conflicts.

Course Outcome :

On successful completion of this course, the students should be able to:

- CC1105.1: Define a group and explain the stages of group development.
- CC1105.2: Describe conflict and explain types and causes of conflict.
- CC1105.3: Use inquiry and advocacy to engage with groups.
- CC1105.4: Give and receive feedback effectively.
- CC1105.5: Identify sources of conflict and manage them using difference conflict handling styles.

Course Title and Code:	Introduction to IoT ; EE1111
Hours per Week	L-T-P: 1-0-2
Credits	2
Students who can take	B.Tech Sem V All Branches

Course Objective- The course aims to develop understanding of Internet of Things concepts and also develop skills for working on IoT development boards to interface sensors and actuators. The course will enable the students to upload data from sensors on a web server and to use this data for analytical purposes or to actuate some transducers.

Course Outcome:

On successful completion of this course, the students should be able to:

- EE1111.1 Interface the Analog and Digital sensors to Node-MCU
- EE1111.2 Develop Embedded C programs to read sensor data and upload to public cloud platform.
- EE1111.3 Use Python-based IDE (integrated development environments) for the interfacing of I/O devices with Raspberry Pi.
- EE1111.4 Implement communication protocols for interfacing sensors to microcontrollers.
- EE1111.5 Visualize sensor data uploaded on public cloud.
- EE1111.6 Apply standard protocol(s) for implementation of IoT Systems.
- EE1111.7 Analyze and Improve existing systems with innovative IoT based approaches.

Course Title and Code:	EE1214 Real Time Operating Systems
Hours per Week	L-T-P: 3-0-2
Credits	4
Students who can take	B.Tech Sem V ECE

Course Objectives: The course gives an insight to MSP430 and embedded software in general. The students will learn to implement a basic task scheduler. They will also learn real time programming concepts starting from setting up ports and registers, to more advanced topics like call-back functions, structs, and timers.

Course Outcomes:

On successful completion of this course, the students should be able to:

EE1214.1 Demonstrate a basic understanding of operating systems functionalities.

EE1214.2 Perform scheduler analysis for an application.

EE1214.3 Develop program for Real-time scheduler for an application.

EE1214.4 Program timers, registers and ports of low power microcontroller to implement timing constraints.

EE1214.5 Deploy a task scheduler for multitasking using real time operating system.

Course Title and Code: Cyber Security EE1219	
Hours per Week	L-T-P: 3-0-2
Credits	4
Students who can take	B.C.A. IV semester, B. Tech VI semester

Course Objectives- This course introduces the NIST Cybersecurity framework and sensitizes the students on security risks, malware and social engineering attacks. It builds skills for ensuring good cyber hygiene, monitoring and reporting cyber-attacks for an online computer.

Course Outcomes:

On successful completion of this course, the students should be able to:

EE1219.1. Recommend the implementation tier for the NIST framework for a specific organization.

EE1219.2 Detect malicious attempts in a network using network sniffers

EE 1219.3 Analyze network and application attacks using SIEM.

EE1219.4 Appreciate the significance of cyber forensics and carry stages of forensic investigation by taking memory backups, data recovery, analyzing registry, traffic logs etc.

EE1219.5 Apply SQL injection, Cross-site script hacking, and other ethical hacking on virtual boxes and understand how hackers work.

EE1219.6 Use automation tools for threat intelligence perception.

Course Contents:

Module 1: Introduction to NIST framework, Organization functions, CyberSeek, Types of Cyber Attacks, Vulnerabilities, Risks and Exploits, Overview of zero trust.

Network and Application Security- Intrusion Detection systems (IDS), Intrusion Prevention systems (IPS), Security Information and Event Management (SIEM) log analysis- using Splunk, Snort, Demilitarized zones (DMZ), Honeypots in network. Monitoring cyberattacks using SIEM for DOS, SQLi, XXS, XXE, LFi, Command Injection, identifying False Positive and False Negatives in SIEM logs. **Authentication Protocols** -Lightweight Directory Access Protocol, Kerberos, New Technology LAN manager (NTLM), Active Directory Domain Service (AD DS).

Module 2- Forensic - Introduction, Benefits and Challenges of Digital Forensic, Methodology, setting up Forensic workstation, NIST catalog for searching forensic tools and techniques, Computer, Registry, Mobile forensic tools, difference between Digital and Electronic Forensic, Hands-on using tools-Autopsy, Scalpel and Binwalk for data carving, extracting Botnet from memory, RAM triage., Network Miner and Wireshark for traffic analysis, Registry acquisition using FTK Imager, Shellbag explorer ,Registry viewer. Anti-forensic methods, Steganography tools-Openstego.

Module 3: Ethical Hacking -White hat hackers, Big bounty programs, familiarization with Common Vulnerabilities and Exploits (CVE), Nmap to locate attack vectors, Metasploit framework, Burp Suite for automated scanning. **Threat Intelligence** -Attackers vs Defenders, TI cycle, Online Anonymity, Trend analysis- Webscapper, Elastic search, Monitoring and alerting.

Syllabus (Theory):

Introduction to Planning: Defining planning as a discipline, multidisciplinary nature, role of a planner, fields of planning, Urban, regional, environmental, transport and infrastructure, Concepts of garden City, City beautiful, linear city, Various definitions of town and country planning; Goals and objectives of planning; Components of planning; Benefits of planning; Arguments for and against planning. Economics and social planning as bases of physical planning. Planning Process. Levels of planning in India.

Types of Plans: Definition of development plan; Types of development plans: Master plan, City development plan, Structure plan, District plan, Action area plan, Subject plan, Comprehensive planning, Zonal plans, special area development plan e.g., SEZ (special economic zones), SIR (special investment regions).

Water Supply System: Water supply systems and networks, water sources, quality and quantity requirements, collection and water requirement for various land uses; Factors affecting water demand; Storage facilities; Distribution Systems; rainwater harvesting system.

Sanitation, Sewer system and SWM: Sanitation and Sewer System, types of sewers: General considerations, Sewage Disposal and treatment, Low-cost appropriate technologies for sanitation, Elements of Solid Waste Management, Best practices for solid waste management.

Transport System Types and characteristics of transport systems; Principles of transport infrastructure planning and, pedestrian and cyclist infrastructure; parking facilities; principles of traffic management, urban mass transport systems

Regional planning: definition, need and importance, function, objective, concept of region, types of regions, types and contents of regional planning for block, district, state, national, NCR, resource region, agro-climatic region, topographic region and sectoral planning, major regional problems and their solutions.

Text books:

Course Title and Code:		Introduction to User-Experience; IL1204
Hours per Week	2-2-0	
Credits	4	
Students who can take	B.Tech Sem III/V (All Branches)	
Course Objective- The course takes a student through the complete User-Experience (UX) life-cycle including problem-identification, problem-framing, design exploration and design-evaluation.		
Course Outcome:		
On successful completion of this course, a student should be able to:		
IL1204.1.	Appreciate UX holistically with respect to different types of user-needs.	
IL1204.2.	Conduct User-Studies.	
IL1204.3.	Synthesize a Problem-Statement.	
IL1204.4.	Conduct Creative Design-Exploration.	
IL1204.5.	Conduct Systematic Design Evaluation.

Syllabus (Theory):

UNIT-I Introduction to User-Experience

UXLife Cycle, Layers of User-Experience, Maslow's Hierarchy of Needs.

UNIT-II User-Studies

Ethnography-based Methods, Data-Synthesis, Problem Framing

UNIT-III Design

Design-Exploration, Prototyping

UNIT-IV Evaluation

Planning and Conducting UX-Evaluation, Analyzing Data, Recommending Design Directives.

Studio

- Contextual User-Studies.
- Data Analysis.
- Problem-Synthesis.
- Design-Exploration
- Design-Evaluation.

Course Title and Code: Idea to Business Model; ED1102		
Hours per Week	L-T-P: 3-0-0	
Credits	4	
Students who can take	B. Tech Sem V	
Course Objective- To encourage students to nurture their entrepreneurial traits and think creatively to develop innovative ideas/products for commercial exploitation.		
Course Outcome:		
On successful completion of this course, the students should be able to:		
ED1102.1. Identify problem worth solving through design thinking.		
ED1102.2. Identify customer segment and niche for specific markets.		
ED1102.3. Craft Value Proposition Canvas.		
ED1102.4. Create business model using Lean Canvas Template		
ED1102.5. Build 'A' team for new start-ups.		
ED1102.6. Design and validate solution demo and MVP.		
ED1102.7. Analyse cost, revenue, key channels and pricing model for the venture.		
ED1102.8. Craft positioning statement of a new venture.		
ED1102.9. Classify the different sources of funding.

EE1208	Digital Communication Networks	3	0	2	0	4

Course Objectives: The course introduces the evolution of various digital communication networks. The course emphasizes on the architecture & protocols describing the wireless LANs, mobile cellular networks & optical networks. Components, applications, research issues & network management functions are discussed.

Course Outcomes:

On successful completion of this course, the students will be able to

EE1208.1. Analyze the OSI model of networks.

EE1208.2. Analyze the various architectures employed in digital communication networks.

EE1208.3. Analyze the different protocols used in the digital networks.

EE1208.4. Design issues & protocols of wireless LANs. Emphasis on IEEE 802.11 standards.
WiMax mobility support & broadband applications.

EE1208.5. Formulate, solve & understand research issues in wireless networks

EE1208.6. Design ad-hoc networks, sensor networks & mesh networks

EE1208.7. Analyze satellite, optical and mobile cellular network architectures & protocols
and their applications

EE1208.8. Implement quality of service & network management functions

Assessment Scheme:

Evaluation Scheme for Re-Test:		
1	Theory Exam - III	20
2	Lab Evaluation - II	20
	Total (40)	40

Syllabus (Theory):

1. Evolution of Communication Networks, Layered Architecture and OSI Model, Unified View of Protocols and Services
2. Wireless LANs: Network components, design requirements, Architectures, IEEE-802.11x, WLAN protocols, 802.11p and applications. WMANs, IEEE-802.16: Architectures, Components, WiMax mobility support, Protocols, Broadband networks and applications
3. Cellular networks, Satellite Network, Applications. Wireless ad-hoc networks: Mobile ad-hoc networks, Sensor network, Mesh networks, VANETs, Research issues in Wireless networks
4. Optical networks Client layers of the optical layer, SONET/SDH, Multiplexing, layers, Frame Structure, ATM functions, Adaptation layers, Quality of service and flow, ESCON, HIPPI, Network management functions

Syllabus (LABORATORY):

1. NS2/3 Implementation of congestion control protocol (TCP over IP) after creating a duplex link using nodes in a network
2. Analyze performance of IEEE 802.4 token bus LAN protocol in MAC layer
3. Analyze performance of IEEE 802.5 token ring LAN protocol in MAC layer
4. Implement ARQ stop and wait protocol/sliding window protocol in Data Link layer
5. Implement the different frames of HDLC protocol
6. Execute the Distance Vector Routing and Link State Algorithms
7. Analyze the performance of IEEE 802.3 CSMA/CD LAN protocol operating at MAC layer
8. Execute the go back N protocol/ selective repeat transmission flow control protocol
9. Design and Analyze a wireless sensor network architecture (also with TCP)
10. Design and Analyze a mobile ad-hoc network architecture

EE1115	Digital Signal Processing	3	0	2	0	4

Course Objectives: The course develops the fundamental concepts of signals & systems, the sampling concept, representation of signals in frequency & time domain and their analyses. Various operations on discrete time signals are done using z-transform, Fourier transform, DFT, and IIR and FIR digital filter designs are also emphasized.

Course Outcomes:

On successful completion of this course, the students will be able to

- EE1115.1. Analyze the various classifications & operations on signals
- EE1115.2. Analyze the frequency & time domain representations of signals
- EE1115.3. Implement fast Fourier transforms on signals
- EE1115.4. Implement discrete time systems
- EE1115.5. Analyze and solve problems using z transform
- EE1115.6. Implement digital filter design techniques
- EE1115.7. Implement IEEE standards for efficient signal processing

	Total (100)	100
Evaluation Scheme for Re-Test		
1	Theory Exam - III	20
2	Lab Evaluation - II	20
	Total (40)	40

Syllabus (Theory):

Signals, systems and signal processing, classification of signals, Signal operations, elements of digital signal processing system, concept of frequency in continuous and discrete time signals, Periodic Sampling, Frequency domain representation of sampling, Reconstructions of band limited signals from its samples

Discrete-Time Signals and Systems (Frequency Domain analysis):

The Z-Transform: The Direct Z-Transform, The Inverse Z-Transform; Properties of the Z-Transform; Frequency domain representation of Discrete-Time Signals & Systems, Representation of sequences by discrete time Fourier Transform (DTFT), Properties of discrete time Fourier Transform, and correlation of signals, Fourier Transform Theorems; The Discrete Fourier Transform, The DFT as a Linear Transformation, Relationship of the DFT to other Transforms; Properties of the DFT: Periodicity, Linearity, and Symmetry Properties, Multiplication of Two DFTs and Circular Convolution; Relationship between Fourier and Z-transforms

Efficient Computation of the DFT: Fast Fourier Transform Algorithm

Efficient Computation of the DFT: FFT Algorithms: Direct Computation of the DFT, Radix-2 FFT Algorithms: Decimation-In-Time (DIT), Decimation-In-Frequency (DIF); Applications of FFT Algorithms: Efficient Computation of the DFT of two Real Sequences, Efficient Computation of the DFT a 2N-Point Real Sequence

Implementation of Discrete-Time Systems:

Structure for the Realization of Discrete-Time Systems, Structure for FIR Systems: Direct-Form Structure, Cascade-Form Structures, Frequency-Sampling Structures; Structure for IIR Systems: Direct-Form Structures, Signal Flow Graphs and Transposed Structures, Cascade-Form Structures, Parallel-Form Structures

Filter Design Techniques:

Filter Function Approximations and Transformations: Review of approximations of ideal analog filter response, Butterworth filter, Chebyshev Type I & II; Design of Discrete-Time IIR filters from Continuous-Time filters Approximation by derivatives, Impulse invariance and Bilinear Transformation methods; Design of FIR filters by windowing techniques

Syllabus (LABORATORY):

11. (a) Generation and analysis of mathematical operations/functions and analysis of continuous and discrete signal waveforms (periodic and non-periodic)
 - (b) Generation of Exponential and Ramp signals in Continuous & Discrete domain
12. Verify the Sampling Theorem
13. Adding and subtracting two given signals (Continuous and Discrete)

14. Analyze and compare Linear and Circular Convolution
15. Generate and analyze random sequences with arbitrary distributions, means and variances for Rayleigh distribution, Normal distributions: $N(0,1)$ and Gaussian distributions: $N(m_x, \sigma_x^2)$
16. Computation of DFT and IDFT using direct and FFT methods
17. Generate sum of sinusoidal signals
18. Compute frequency response of analog filters (Low Pass/High Pass)
19. Design and simulate FIR Rectangular/Hamming/Kaiser windows digital filter (Low Pass/High Pass)
20. Design and simulate IIR Butterworth/Chebyshev digital filter (Low Pass/High Pass)

Textbooks:

Course Title and Code: Critical Thinking for Decisions at Workplace CC1106		
Credits: 2 , LTP : 2 0 0		
Course Objective: In today's world, the idea of right and wrong is being challenged by businesses, use of technology, economic conditions, and norms of societies. The relevance of a well-reasoned decision is crucial. This course intends to make students take better decisions keeping in mind purpose, context, and ethics.		
Course Outcomes		
<i>The students will be able to:</i>		
CC1106.1 Apply strategies of Critical Thinking to examine organisational problems through positive inquiry		
CC1106.2 Describe and examine suitable problem-solving and ethical decision-making processes		
CC1106.3 Choose the simplest and logical decision among multiple alternatives		
CC1106.4 Evaluate solutions and count on possible risks based on purpose, context and ethics

EE1216	Industrial IoT	3	0	2	2	04

Course Objectives:

This course aims at creating the fundamentals skills required to design, implement, and maintain industrial IoT systems.

Course Outcomes:

- EE1216.1 - Explain the key components that make up an Industrial IoT system.
- EE1216.2 - Discuss protocols and standards employed at each layer of the IIoT stack.
- EE1216.3 - Design, deploy and test a basic Industrial IoT system, including data analysis functionalities.
- EE1216.4 - Apply best practices to meet desired requirements for IIoT applications.
- EE1216.5 - Analyze the environmental effects and incorporate robustness in design of IIoT system.
- EE1216.6 - Choose technology for constrained nodes and network while maintaining real time data collection.
- EE1216.7 - Explain the importance of cybersecurity for IIoT networks.

Evaluation Scheme for Retest

1	Theory Exam-3	30
---	----------------------	-----------

Course Syllabus:

Unit 1 IIoT Fundamentals

Industrial communication: principles, protocols and technologies. IIoT definition, architectures and use cases. Convergence of IT and OT. Design methodology.

Unit 2 Interfacing sensors and actuators-

Interfacing proximity sensor, vibration sensor, color sensors. Controlling AC motor .

Unit 3 Programming with Node Red- Injecting nodes, debugging, managing palettes, designing dashboard.

Unit 4 Cloud services

Basic concepts. Applications: predictive maintenance, quality monitoring, personalized dashboards.

Practical work: Design and test a basic IIoT system involving prototyping, programming, and data analysis.

EE1112	Industrial Electronics	3	0	2	0	4

Course Objectives:

- EE1112.1 Analyze the characteristics of power devices under different load condition
- EE1112.2 Choose appropriate power devices for different requirement of power conversion, and speed control of drives. Also analyze and evaluate their performance
- EE1112.3 Design an electric vehicle charging station with solar PV system.
- EE1112.4 Design battery pack using lithium ion batteries.
- EE1112.5 Use IEC standards for design and analysis of power electronics system

Course Outcomes:

On successful completion of this course, the students should be able to:

1. Analyze the characteristics of power devices under different load condition
2. Choose appropriate power devices for different requirement of power conversion, and speed control of drives. Also analyse and evaluate their performance
3. Design an electric vehicle charging station with solar PV system.
4. Design battery pack using lithium ion batteries.
5. Use IEC standards for design and analysis of power electronics system.

1	Theory Exam-III	30
2	Lab Evaluation-II (Examination)	10
Total		40

Course Syllabi (Theory):

Unit – I: Power Devices: Need for power conversion; Power electronic converters: classifications and scope; Power semiconductor switches: diodes, SCR, GTO and transistors (BJT, MOSFET and IGBT): Ratings, static and dynamic characteristics, drive and switching aid circuits and cooling.

Unit – II: Phase controlled converters: Principle of operation of single phase and three-phase half wave, halfcontrolled, full controlled converters with R, RL and RLE loads, effects of freewheeling diodes, performance parameters evaluation of converters.

Unit – III: DC-DC converters: Principle of operation, control strategies, step up choppers, types of choppers circuits based on quadrant of operation, performance parameters, multiphase choppers and switching mode regulators.

Unit – IV: Inverters: Classification, method of commutation & connections, single phase and three phase bridge inverter with R and RL loads, performance parameters evaluation of inverters, design solar power fed electrical vehicle charging station

Unit – IV: Cyclo-converter: Principle of cyclo-converter operation, single phase to single phase Cyclo-converter circuit, Three-phase to single-phase and three-phase to three phase configurations.

Course Syllabi (Practical):

1. Determine V-I characteristics of SCR and measure forward breakdown voltage, latching and holding currents.
2. Find V-I characteristics of TRIAC and DIAC.
3. Find transfer and output characteristics of MOSFET and IGBT.
4. Study and test firing circuits for SCR-R, RC and UJT firing circuits.

5. Study and test 3-phase diode bridge rectifier with R and RL loads.
6. Study and obtain waveforms of single-phase half wave controlled rectifier. Study the variation of output voltage with respect to firing angle.
7. Study and test 3-phase diode bridge rectifier with R and RL loads.
8. Study and obtain waveforms of single-phase half controlled bridge rectifier with R and R-L loads. Study and show the effect of freewheeling diode.
9. Design a solar power fed electrical charging station using data sheet of PV module, solar inverter and electrical vehicle.
10. Study and design a battery pack using Lithium Ion batteries.

COURSE SYLLABUS (Theory)

UNIT I: Introduction

Introduction to Mechatronics system, key elements, Mechatronics Design process, Design Parameters, Traditional and Mechatronics designs, Advanced approaches in Mechatronics, Industrial design ergonomics and safety.

UNIT II: Sensors and Actuators

Sensor and transducers, digital logic, signal processing devices, relays, contactors and timers. Actuation systems, pneumatic and hydraulic system, control valves, cylinders, rotary actuators, mechanical systems, drives, bearings, electrical systems, electrical and mechanical switches, solenoids, motors, signal conditioning, filtering, power transfer, digital signals, A-D and D-A converters.

Unit III: Microprocessor

Microprocessor, microcontroller, programming, application examples, interfacing and applications, PLC, ladder programming, timers and counters, PLC system.

Unit IV: System Models and Micro Mechatronic System

System Models

Mathematical models, building blocks for mechanical systems, electrical systems, fluid systems, thermal systems, description of PID controllers.

Micro Mechatronic System

Introduction, System principle, Component design, System design, Scaling laws, Micro actuation, Micro robot, Micro pump, Applications of micro mechatronic components.

Unit V: Case Studies

Introduction, Fuzzy based washing machine, Motion control using DC Motor & Solenoids, Engine management systems, controlling temperature of a hot/cold reservoir using PID, Control of pick and place robot.

COURSE SYLLABUS (Laboratory)

1. Responses of First and Second Order Mechanical Systems
2. Basics of Frequency Domain Signal Analysis
3. Frequency Response of Mechanical Systems
4. Time-Frequency Analysis of Mechanical Systems
5. Gearbox Fault Detection
6. Pump Impeller Fault Detection
7. Vibration Monitoring of Machineries by Wireless Technique
8. Electrical Motor Fault Detection by MCSA

Exp. No. 1 to 8: <http://vlabs.iitkgp.ernet.in/mssp/#>

9. Identification and familiarisation of the following components: resistors, inductors, capacitors, diodes, transistors, LED's.
10. Familiarization with the following components: CRO, transformer, function generator, multimeter, power supply.
11. Familiarization with the following electrical machines: Induction motors, DC motors, synchronous motors, single phase motors.
12. Familiarization with the following mechanical components: gears, gear train, bearings, couplings, tachometer.
13. Implementation Logic Gates
14. Implementation of PID Controller

Exp. 13 and 14: <http://plc-coep.vlabs.ac.in/List%20of%20experiments.html?domain=Electrical%20Engineering>

15. Case study: modeling and control of combustion engines.
16. A case study: automotive transmission as a “gear reducer”.

Course Title and Code: Disaster Management: CE 1206	
Hours per Week	L-T-P: 3-1-0
Credits	4
Students who can take	B.Tech SemVI sem (2019-2023) (OE)
Course Objective: This course aims to develop understanding of various natural and manmade disasters. Natural disasters include earthquake, Tsunami, Flood, forest fires and Land Slides. Manmade disasters include fire, Industrial Pollution, embankment failure, structural failure and due to electric supply. Topics includes the causes for these disasters and remedial measures which can minimize the losses to the life and property. The course also includes the identification and description of electric supply resilience and restoration.	

Course Outcomes

On completion of the course, the student should be able to:

CE1206.1 Asses the types of disasters, causes and their impacts.

CE1206.2 Assess vulnerability and various methods of risk reduction measures and mitigation.

CE1206.3 Draw the hazard and vulnerability profile of a given region.

CE1206.4 Analyze the impact of Storms and Severe Weather on electric utility.

CE1206.5 Plan and execute framework to black start and restoration procedure with considering security criteria and power system reliability.

Syllabus (Theory)

Unit-1 Introduction to Disasters, Various types of disaster, Natural: Flood, Earthquake, cyclone, Land slide, Manmade: Fire, Industrial Pollution, embankment failure, structural failure, Loss of resources.

Unit-2

Risk and Vulnerability:

Risk: Its concept and analysis, Risk reduction, Vulnerability: Its concept and analysis, strategic development for vulnerability reduction

Unit 3

Disaster Management in Electrical Systems:

Causes of Extended Outages, System Impact of the Loss of Major Components, Methods to Reduce Energy System Vulnerability, Development of an On-Site and Off-site Disaster management Plan, Accident prevention techniques and Reporting procedures, Investigation reports, Impacts of Blackouts.

Unit – 4

Management- Objectives, Processes, Events, analysis, base-line data, forecasting and Warnings. Disaster preparedness plan concept and nature, Emergency operation center and IT aids- physical environment, Applications. Public-private agency co-ordination- federal, state and local disaster response organization and network, Citizen and community role in disaster response and recovery.

Case Studies

11. A Case study on flood Hazard
12. A case study on Tsunami Hazard
13. A case study on Earthquake
14. A case study on Forest fire
15. A case study on structural failure
16. A case study on Electrical Disaster Recovery Operations for a Hospital
17. A Case study of Impacts of Cyclones on the Power Sector in India.
18. Impact assessment of Storms and Severe Weather on electric utility infrastructure.

Course Title and Code:	Minor Project PR1103	
Hours per Week	L-T-P: 0-0-2	
Credits	4	
Students who can take	B.Tech Sem VII	
<p>Course Objective- This course offers an opportunity to apply and extend knowledge learned throughout the program to solve real world issues. The minor projects undertaken span a diverse range of topics, including design, simulation, and experimental studies. The course emphasizes, facilitating student learning in technical, project implementation and presentation spheres.</p>		
<p>Course Outcome: On successful completion of this course, the students should be able to: PR1103.1. Identify and formulate industrial and societal problems. PR1103.2. Design engineering solutions for complex problems. PR1103.3. Develop/fabricate and implement solutions for identified problem. PR1103.4. Demonstrate the knowledge, skills and attitudes of a professional engineer.</p>		
<p>Operation Procedure:</p> <p>Students are expected to achieve the objective of the project work. The students are expected to submit a synopsis at the beginning of the semester for approval from the departmental committee in a specified format. The students are expected to report to their mentor(s) frequently and will be evaluated continuously. Department committee will evaluate the work through seminars and progress reports as per the evaluation scheme. At the end there would be a demonstration of the solution and possible future work for the work done.</p> <ul style="list-style-type: none"> • Student must devote full semester for Minor Project. • Student must report to the mentor(s) regularly. • Seminar evaluation must be carried out in the presence of at least two-committee members. • Experts in the relevant area constituted by the supervisor. • Final Seminar Report to be submitted must be in formal hard bound cover bearing of the Institute emblem. • Assessment is by means of a synopsis presentation, submission of a thesis, and a public demonstration of work undertaken.

EE1206	Industrial Drive and E-Vehicle	3	0	2	4

Course Objectives: This course is aimed at developing the required understanding to design various control strategies for AC & DC machines and select proper size & type of motor as per industry requirements. It focuses to develop power electronics applications for electrical machines and industrial equipments.

Course Outcomes:

On successful completion of this course, the student will be able to:

EE1206.1. Apply the theories of electrical machines, power electronic converters and control system design to implement electric drive systems and analyze transient behaviour of electric drives.

EE1206.2. Design BJT, MOSFET and IGBT gate drive circuits, protection circuits as well as cooling requirements for power semiconductor devices.

EE1206.3. Implement the control techniques in DC to AC or AC to DC converters for efficient starting, braking and speed control operation of electric motors.

EE1206.4. Use 3002.7-2018 - IEEE standards for minimizing transient losses and starting time.

EE1206.5. Select efficient motor for different type of E-Vehicles to operate in different conditions.

EE1206.6. Utilize Matlab as simulation tool to accurately analyze the electric drive system

Syllabus (Theory)

INTRODUCTION: - Definition & classification of different type of drives, Dynamics of electrical drives, Review of characteristics and components of electric drives, acceleration and retardation time, energy consideration.

BRAKING and SPEED CONTROL OF DRIVES: - Various methods of braking of a.c. and d.c drives, Automatic control arrangement, Speed control methods of various a.c. and d.c. drives, its advantages and applications, Transient analysis.

INDUCTION MOTOR (A.C) DRIVES: - Basic principle of induction motor drives, 3 ϕ a.c voltage controller fed I.M drive, variable frequency control, voltage source inverter (VSI) and current source inverter (CSI), cycloconverter fed IM drive, Slip Power control, static rotor resistance control, chopper control of 3 - ϕ slip ring induction motor.

DC DRIVES: - Rectifier controlled circuits, Single phase fully controlled and half controlled rectifier fed separately excited d.c motor, 3 ϕ fully and half controlled fed separately excited d.c. multiquadrant operation of dc separately excited motor, Motor, performance and characteristics, Control techniques of d.c. Drives using chopper.

ELECTRICAL VEHICLES: -Motor Drive for EV: Permanent Magnet Brushless DC Motor Drives (PM-BLDC), Switched Reluctance Motor (SRM) Drive, Modeling PM-BLDC and SRM drive for EV, Sensors and actuators for EV.

Syllabus (Practical)

1. Three phase voltage source inverter simulation using MATLAB
2. Three phase voltage source converters with space vector PWM simulation using MATLAB.
3. Buck converter simulation using MATLAB.
4. Boost converter simulation using MATLAB.
5. Speed control DC Motor using BJT-H bridge simulation using MATLAB
6. Three phase thyristor converter simulation using MATLAB
7. Chopper fed DC motor drive simulation using MATLAB
8. Three phase permanent magnet synchronous motor drive simulation using MATLAB

Students who can take	B.Tech & M. Tech Semester-IL2203	
Course Objective:		
To provide understanding of robots and manipulators in different fields of application, also to synthesis planar and spatial manipulator and its control strategy.		
Course Outcomes:		
On successful completion of this course, the students will be able to: identify the use of robots and its application in industry and everyday life.		
IL2203.1. analyze kinematic parameters of different robots.		
IL2203.2. analyze dynamic parameters of robots and method to improve its performance including energy requirements.		
IL2203.3. develop open and close loop control system for a manipulator.		
IL2203.4. perform trajectory planning for a manipulator.

COURSE SYLLABUS (Theory):

UNIT - I

Introduction:

Robotics trends and the future. Introduction: serial robot, parallel robot, exoskeleton, mobile robot, under water robot, flexible & space robot. Robot anatomy: links, joints and joint notation scheme, Degrees of Freedom (DOF), required DOF in a manipulator, arm configuration, wrist configuration; end-effector, human arm characteristics, design & control issues, manipulation & Control, robotics sensors, robot specification, different robot programming platform.

UNIT - II

Robot Motion Analysis:

Introduction to co-ordinate frames mapping, mapping between rotated frames, mapping between translated frames, description of objects in space, transformation of vectors - rotation & translation of vectors, composite transformations, inverting a homogeneous transform, fundamental rotation matrices – principle axes rotation fixed, Euler and equivalent angle axis representations.

Kinematics Manipulators:

The kinematic modeling of manipulator, direct kinematics, Denavit – Hartenberg notation, kinematic relationship between links, manipulator transformation matrix, the inverse kinematics manipulator: workspace, solvability of inverse kinematic model, singularities of manipulators.

UNIT – III

Differential Motion, Statics:

Linear and angular velocity of a rigid body, relationship between transformation matrix and angular velocity, mapping velocity vectors, velocity propagation along links. manipulator Jacobian, Jacobian inverse, Jacobian singularities, static analysis. Jacobian in statics.

UNIT – IV

Dynamics:

Introduction, Lagrangian mechanics, Lagrange – Euler formulation, velocity of a point on the manipulator, the inertia tensor, the kinetic energy, the potential energy. equations of motions, the Lagrangian-Euler (LE) dynamic model algorithm. Introduction to robot control, Open loop, close loop system, and differential equation, control of movements of mechanical joints.

UNIT – V

Trajectory Planning

Definition and planning tasks, joint space techniques, Cartesian space techniques, joint space versus Cartesian space tp. Introduction to machine vision.

COURSE SYLLABUS (Practical):

1. To determine the forward kinematic of a 1-DOF robot using virtual platform
2. To determine the forward kinematic of a 3-DOF robot using virtual platform
3. To determine the forward kinematic of a 6-DOF robot using virtual platform
4. To determine the inverse kinematic of a 1-DOF robot using virtual platform
5. To determine the inverse kinematic of a 3-DOF robot using virtual platform
6. To determine the forward dynamic of a 3-DOF robot using virtual platform
7. To determine the inverse dynamics of a 3-DOF robot using virtual platform
8. To determine the trajectory control of a 3-DOF robot using virtual platform
9. To determine the trajectory control of a 6-DOF robot using virtual platform
10. To write a MATLAB program to interface camera for data acquisition.
11. To write a MATLAB program to determine pattern in an image.

EE1218	Information Theory and Coding	3	0	2	0	4

Course Objectives: This course is designed to disseminate knowledge of information theory and its application to optimize channel capacity and hence design and implement optimal coding techniques for efficient communication via noisy channels.

Course Outcomes:

On successful completion of this course, the students will be able to:

EE1218.1. Implement various coding strategies like Huffman Coding, Turbo coding, etc.

EE1218.2. Optimize various codes like Shannon codes, Trellis codes etc.

EE1218.3. Characterize Error Free Communication Over A Binary Symmetric Channel

EE1218.4. Analyse Channel Capacity of a Band Limited Continuous Channel

EE1218.5. Analyse various encryption and decryption standards

EE1218.6. Analyse security goals, types of attacks, steganography, symmetric and asymmetric key encipherment and implement cryptanalysis

EE1218.7. Analyse different aspects of digital signature, key management & network layer security

Assessment Scheme:

S. No.	Evaluation Component	Marks

	Total (100)	100
Evaluation Scheme for Re-Test		
1	Theory Exam - III	30
2	Lab Evaluation - II	10
	Total (40)	40

Syllabus (Theory):

UNIT 1: Introduction to Information Theory Society (ITSOC) standards, Information Measure and Entropy, Properties of Joint and Conditional Information, Properties and Problem Solving in Entropy, Block Codes, Kraft-McMillan Inequality and Compact Codes, Digital Signature

UNIT 2: Properties of Mutual Information and Introduction to Channel Capacity, Calculation of Channel Capacity for Different Information Channels, Error Free Communication Over Noisy Channel, Error Free Communication Over A Binary Symmetric Channel, Differential Entropy and Evaluation of Mutual Information for Continuous Sources and Channels

UNIT 3: Shannon's Theorem, Coding Strategies, Huffman Coding and Optimality, Reliability-Based Soft-Decision Decoding for Linear Block Codes, Trellis-Based Soft-Decision Decoding for Linear Block Codes

UNIT 4: Shannon-Fano Coding, Equivocation and Mutual Information, Properties of Different Information Channels, Turbo Coding, Low-Density Parity Check Codes, $GF(2^n)$ Fields, modern block ciphers, Data Encryption Standard (DES), Advanced Encryption Standard (AES), message integrity and authentication

Syllabus (LABORATORY):

21. Implementation of Cipher Encryption and Decryption
22. Implementation of one time padding for maintaining secrecy
23. Implementation of message authentication codes
24. Application of cryptographic hash functions
25. Implementation of symmetric key Data Encryption Standard (DES)
26. Implementation of symmetric key Advanced Encryption Standard (AES)
27. Diffie - Hellman key establishment
28. Public key encryption and decryption
29. Implementation of the RSA algorithm
30. Application of digital signatures

EE1211	Advanced Communication Systems	3	0	2	0	4

Course Objectives: This course is focused on application of advanced communication techniques in Wireless communication, fibre optic communication and antenna design. The course also emphasizes issues of electromagnetic interference and compatibility.

Course Outcomes:

On successful completion of this course, the students will be able to

EE1211.1 Characterize fibre optic system components and classify optical fibres

EE1211.2 Design optical link for specific bit error rate

EE1211.3 Analyze evolution of mobile radio communications (from 2G/3G/4G systems to 5G infrastructure)

EE1211.4 Design cellular system for specified handoffs and call drop probabilities

EE1211.5 Analyse EMI/EMC standards and procedures

EE1211.6 Characterize Antenna Radiation Hazards and implement AISG (The Antenna Interface Standards Group) standards

EE1211.7 Design and analyse Planar Antenna Arrays, Microstrip Antennas and Broadband and Compact antennas

Evaluation Scheme for Re-Test		
1	Theory Exam - III	30
2	Lab Evaluation - II	10
	Total (40)	40

Syllabus (Theory):

Module 1: Optical Fiber Communication

UNIT-I: Evolution of Light wave systems, System components, Optical fibers - Step Index & Graded index - Mode theory, Dispersion in fibers, Dispersion shifted and dispersion flattened fibers - Fiber Losses - Non-linear effects, OPTICAL TRANSMITTERS/SOURCES: - LED structures - Spectral Distribution - Semiconductor lasers - Structures – Threshold conditions - SLM and STM operation - Transmitter design

UNIT-II: OPTICAL DETECTORS AND AMPLIFIERS: Basic Concepts - PIN and APD diodes structures, Photo detector Noise, Receiver design, Coherent detection Semiconductor optical amplifiers; Raman - and Brillouin amplifiers - Erbium-doped fiber amplifiers, pumping requirements, cascaded in-line amplifiers, COHERENT LIGHTWAVE SYSTEMS: Homodyne and heterodyne detectors - Modulation formats - Demodulation schemes - BER in synchronous receivers - Sensitivity degradation – Post - and pre compensation techniques - Optical solitons - Soliton based communication system

Module 2: Wireless Communication

UNIT-I: Evolution of Mobile radio communications – Mobile radio systems in the U.S. and around the world, Evolution of 1 G and 2G systems. OFDM, MIMO concepts, Evolution of 3G and 4G systems, 5G infrastructure

UNIT-II: Cellular concept – Frequency reuse – Channel Assignment strategies – Handoff strategies – Interference and System capacity – Improving capacity in cellular systems, MOBILE RADIO PROPAGATION: Small-scale multipath propagation – Impulse response of a multipath channel – Parameters of mobile multipath channel – Types of small-scale fading – Rayleigh and Rician distributions – Statistical models for multipath fading channels

Module 3: EMI/EMC and Antenna Design

Unit I: EMI/EMC standards and procedures, Antenna design parameters, IEEE 149-1977 test procedure, Antenna Fundamentals, Antenna Radiation Hazards, Introduction to AISG (The Antenna Interface Standards Group)

Unit II: Loop Antennas, Slot Antennas, Planar Arrays, Microstrip Antennas, MSA Parametric Analysis, Broadband & Compact MSA, Tunable MSA, MSA Arrays, PIFA, Design of low power Antenna having controlled EM radiation

Syllabus (LABORATORY):

31. Characterization of Step Index and Graded Index optical fibres
32. Measurement of Numerical Aperture of optical fibres
33. Fibre Optic Analog and Digital Link establishment
34. Characterization of mobile fading channels w.r.t
 - (a) Simple pathloss model
 - (b) Pathloss with shadowing model
35. Characterization of Cellular Frequency Reuse
36. Characterization of Co-Channel Cells and Cell cluster

37. Characterization of Frequency Handoff
38. Design of Microstrip Patch Antennas
39. Design of Microstrip Patch Arrays
40. Characterization of EIRP and EMI/EMC certification issues w.r.t IEEE and AISG standards for radiating systems

Credits	4	
Students who can take	B.Tech Sem VII EEE/CSE	
Course Objective- This course imparts knowledge on image preprocessing and machine learning for image recognition and classification. It develops understanding various fundamental concepts for design of Convolutional Neural Networks (CNN) for image classification. Various advanced Neural networks developed during ImageNet challenges are introduced.		
Course Outcome: On successful completion of this course, the students should be able to: EE1217.1 Implement Image Processing Algorithms using OpenCV tools. EE1217.2 Design, Train and Test Neural Networks and deploy suitable activation functions using Keras/Tensorflow libraries. EE1217.3 Identify suitable Performance Parameters and evaluate technique for best performance. EE1217.4 Use transfer learning from existing trained networks to develop innovative solutions.

Retest

1	Theory Exam	30
2	Lab Evaluation-II	10

Syllabus (Theory):

UNIT-I Distribution System & Automation

Distribution of power, future distribution systems, distribution system topology and structure, distribution automation (DA) and control, DA function, distribution management systems, voltage/var control, reconfiguration of distribution systems, intelligent systems in

DA, concept of smart metering, area network, advanced metering infrastructure, information flow of system monitoring, typical distribution with communication link.

UNIT-II EHV AC transmission

Engineering Aspects of EHV AC Transmission System: Principles, configuration, special features of high voltage AC lines, power transfer ability, reactive power compensation, bundle conductors, right of way, tower configuration

UNIT-III HVDC transmission

Types of D.C. links, advantages, and disadvantages of HVDC transmission, Basic scheme and equipment of converter station, Ground return, DC link control and basic converter control characteristics, HVDC circuit breaker, Applications.

UNIT-IV FACTS

Introduction to FACTS controllers, types of FACTS controllers, Brief description of STATCOM, Thyristor controlled series capacitors and unified power flow controller, Thyristorised static VAR compensators, and UPFC.

UNIT-V Protection Schemes

Overcurrent and overvoltage protection of transmission lines, differential protection, transformer protection, generator protection, induction motor protection, Bus bar protection, distance protection scheme.

Course Syllabi (Practical):

19. Fault scenario simulation in a feeder , Transformer and Bus
20. Load Transfer from one Feeder to other during Transformer Maintenance
21. Monitoring Feeder parameter from workstation
22. Development of 11KV/433 volts substation automation scheme using PLC for normal load operation
23. Development of 11KV/433 volts substation automation scheme using PLC for cyclic ON/OFF load control
24. Calculation of ABCD Parameters for Short, Medium and Long Transmission Lines.
25. Reactive power compensation of a transmission line using STATCOM
26. Modeling of FACTS devices using MATLAB.
27. Study under/over frequency relay and check it's setting experimentally.
28. To study the directional over-current relay in virtual lab environment.

Credits	4
Students who can take	B. Tech Sem VII sem (All Branches)
Course Objective: This course aims to develop understanding of various methods of remote sensing, satellite images data acquisition, data format and data output. It also explains the major applications of GIS i.e., climate change, natural resources management and water resources management.	
Course Outcomes:	
On completion of the course, the student should be able to:	
CE1214.1.	Asses the various sources for remote sensing data.
CE1214.2.	Analyze the data from various type of images.
CE1214.3.	Analyze the data acquisition and data output through GIS and GPS.
CE1214.4.	Incorporate GIS in resources management and climate changes.

Evaluation scheme for retest		
	Theory Exam III	30

Syllabus (Theory)

1. Remote sensing satellites and their data products, Sensors and orbital characteristics, Spectral reflectance curves and resolution
2. Satellite Image - Characteristics and formats, Image histogram, Introduction to Image rectification, Image Enhancement, Land use and land cover classification system, Supervised Classification
3. Basic concepts of geographic data, GIS and its components, Data acquisition, Raster and Vector formats, topology and Data models, Spatial modelling, Data output

4. Application of GIS: Climate change, Natural resources management, Forest management, Water Resources management, Drought Management

5. GPS: Introduction, coordinates and time system, Satellites, Mathematical model of GPS observables, Methods of processing GPS data

Syllabus (Practical)

1. Creating and Exploring a Basic Map
2. Classifying and Creating Vector Data
3. Laying Out of the Maps
4. Classifying and Creating Raster Data
5. Terrain Analysis
6. Raster to Vector Conversion
7. Hydrologic Analysis

Course Title: Fintech in Retail Banking and Insurance**Course Code: FA1151****Credits: 3****Semester: B.Tech VII, BBA V****Course Objective:**

The course provides overview of how fintech is transforming retail banking and insurance in India.

It provides an overview of various retail banking products (liabilities, 3rd party sales, assets) and insurance products covering in brief product features, sales channels and associates risks.

The course will help prepare students for career in retail financial services industry,

Course Outcomes:

FA1151.1 Introduction to retail banking & its various facets

FA1151.2 Introduction to insurance and its various facets

FA1151.3 How Fintech is transforming functions across insurance and retail banking and opportunities ahead

Course Content/Topics to be covered:

- Chapter 1: History of banking and evolution of retail banking
- Chapter 2: History of Insurance and introduction to Insurance business
- Chapter 3: Evolution of Fintech and introduction to Fintech
- Chapter 4: Retail liability products
- Chapter 5: Third party products
- Chapter 6: Loan calculator
- Chapter 7: Retail asset products
- Chapter 8: Credit Bureau
- Chapter 9: Life insurance products & roadmap
- Chapter 10: General insurance products and roadmap
- Guest lecture by Insurance experts
- Chapter 11: Fintech... payment gateways
- Chapter 12: Fintech... lending
- Chapter 13: Fintech... third party products brokerage, insurance, mutual funds
- Guest lecture by Fintech industry experts
- Chapter 14: Life journey of an individual... saving, insurance and retirement planning
- Chapter 15: Introduction to financial inclusion, small finance banks, microfinance and guest lecture by Small Finance Bank/ MFI expert... Optional
 - Presentation by students

Evaluation Scheme:

Component	Weightage (100)
Minor Projects (5, 10% each)	50%
Mid Term Quiz (30 th Sep)	10%
End Term Exam	40%

Students who can take	B.Tech Sem VII (Open Elective)

Course Objective- To familiarize students with concepts of probability theory and random variables and use them to analyze real life problems. This course also focuses on developing an understanding of regression models, data analysis, model building, interpretation of results and statistical computation.

Course Outcome:

On successful completion of this course, the students should be able to:

AS1202.1. Identify and formulate fundamental probability distributions and density functions.

AS1202.2. Analyze continuous and discrete-time random variables and processes.

AS1202.3. Analyze system of multiple random variable.

AS1202.4. Compute cumulative distribution function and normalizing constant for the probability density function of one or more random variables.

AS1202.5. Apply the concept of algebra of random variables to analyze various linear systems.

AS1202.6. Design experiments as processes and analyze these using appropriate statistical tool.

Retest

1	Theory Exam	30
---	-------------	----

Syllabus (Theory):

RANDOM VARIABLES

Random variables, Distribution and density functions of random variables, Discrete and continuous random variables, Gaussian, Exponential, Rayleigh, Uniform, discrete Uniform and conditional distributions, distribution mean, variance, moments and characteristics functions.

MULTIPLE RANDOM VARIABLES

Function of two random variables, Distributions of two random variables, correlation coefficient, Joint moments, Joint characteristics functions, Conditional distributions, conditional expected values, statistical independence. Multiple random variables, distribution of sums of random variables, Central limit theorem.

OPERATIONS ON MULTIPLE RANDOM VARIABLES

Mean or expected value of multiple random variables, Variance, standard deviation, moments, Chebyshev's Inequality, moment generating function, characteristic function, covariance, variance of a linear combination of random variables.

REGRESSION ANALYSIS

Introduction to regression model, Types of regression models, Estimation of the regression coefficients and error variance, Inferences for the regression coefficients, Predicting future observations, Inverse prediction and regulation. An introduction to multiple linear regression models.

DESIGN OF EXPERIMENTS

Analysis of variance, one way classification, two way classification.

PS1102/ PR1105/ PR1104**Practice School-II/ Entrepreneurial Project/ Research Project/ Semester at a partner University****Course Syllabi:**

This course is for five four and half months (summer and one semester) in VII or VIII Semester. The objective of this programme is to provide the students, an opportunity to work on live projects of corporate world in various fields. During this programme, they will work on real world applications of their curricula through organizational function of their choice. The students are expected to be involved directly in problem solving efforts of specific interest to the host organization. The learning of PS-I will help them in completing PS-II successfully. PS-II duration of internship is 4 - 4.5 months. PS -II Winter internship Dec to May.
