Institute of Engineering and Technolog

Document Name: Curriculum Structure and Syllabus Handbook, Bachelor of Technology in Mechanical Engineering (Programme Code: 3106) - Batch 2020-2024

Document Compilation Date: Jan 24, 2022

Document Description: This document supplements the document titled Curriculum Structure: BTech, MTech and BCA Programs and is prepared by the Institute of Engineering and Technology (IET), JKLU to serve as an information baseline for further planning and delivery of courses w.r.t Bachelor of Technology in Mechanical Engineering (B.Tech ME), Batch 2020-24.

It includes Program Education Objectives, Programme Outcomes, Programme Specific Outcomes, Desired minimum level of competence for POs and PSOs, Curriculum Structure, collation of Semester wise Course Description, and Course Articulation Matrix (CAM) of each course (including electives and additional courses, if any, opted by students) prepared by respective faculty members. The document also includes Programme Articulation Matrix (PAM).

This document is in compliance with BoS (upto 13th meeting) and approvals of the Academic Council (upto 20th meeting).

Document Creation Team:

Dr Ravi Shankar Prasad

Ms Deepika Mishra
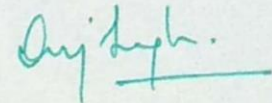

Mr Umesh Tripathi

CONTENTS

Program Education Objectives

The B.Tech and M.Tech. Programs at IET, JKLU are designed to prepare students for continued learning and successful careers. Our alumni are expected to:

PEO1: Apply their technical knowledge, complex problem solving and research skills in professional practice.

PEO2: Continue their intellectual development through critical thinking, self-study, apprenticeship, higher education, professional development courses, as well as participation in research groups and professional networks.

PEO3: Serve as ambassadors for engineering and sustainability by exhibiting high professional standards with a deep sense of civic responsibility.

PEO4: Effectively communicate about technical and related issues.

PEO5: Embrace the roles of team members and leaders in their careers.

Program Outcomes

"*Competence is a demonstrated ability to apply knowledge, skills and attributes for achieving desirable results.*" The graduates of B.Tech. and M.Tech. Programs at IET, JKLU will have following competencies:

PO 1: Life-long learning: Demonstrate inquisitiveness, open mindedness, and the ability to engage in independent and life-long learning in the broadest context of technological, organizational, economic, and societal changes.

PO 2: Citizenship, Sustainability, and Professional ethics

PO 2a: Demonstrate knowledge of constitutional values of liberty, equity, justice, and fraternity with understanding of the impact of the engineering solutions in societal and environmental contexts as well as a sense of responsibility for sustainable development.

PO 2b: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, cultural, and environmental issues and the consequent responsibilities relevant to the professional engineering practice.

PO 2c: Demonstrate commitment for professional integrity and excellence and respect for ethics, responsibilities and norms as prescribed for the engineering practice.

PO 3: Engineering knowledge and Modern tool usage

PO 3a: Demonstrate clear conceptual understanding of fundamentals of engineering specialization and cognitive flexibility to appropriately 'transfer' what has been learned in a context, to different situations.

PO 3b: Apply engineering thinking, computational thinking, and the knowledge of mathematics, natural and social sciences, engineering fundamentals, information technology, engineering specialization, and engineering management to the solution of complex engineering problems.

PO 3c: Create, select, modify, and apply appropriate techniques, best practices, standards, resources, and modern engineering and IT tools including prediction and modelling to engineering and social activities with an understanding of the limitations.

PO 4: Complex problem solving, Design and Research

PO 4a: Identify, formulate, review research literature, and analyze complex engineering problems to arrive at substantiated conclusions using critical thinking along with principles of mathematics, computing, engineering as well as natural and social sciences.

PO 4b: Use systems thinking and reflection to identify and consider underlying structures, patterns, volatility, uncertainties, complexities, ambiguities, complications, and risks to design and develop engineering solutions for complex problems to meet the specified and anticipated needs with appropriate concern for constraints, performance, sustainability, and professional ethics.

PO 4c: Use research-based knowledge and research methods including design of experiments, simulation, analysis and interpretation of data, and synthesis of the information to evaluate and improve the engineering solutions and practice.

PO 5: Individual & team work and Engineering management

PO 5a: Ability to work effectively as an individual and as a team member or leader in diverse and distributed teams, and in multidisciplinary settings.

PO 5b: Ability to apply engineering management principles to one's own and team's work to manage engineering projects and operations and in multidisciplinary environment.

PO 6: Communication: Ability to communicate effectively on complex engineering and technology activities, situations, problems, and solutions using verbal, textual, and pictorial elements with the colleagues, engineering community, users, clients, policy makers, and society at large with intellectual honesty, clarity, empathy, and compassion.

PO 7: Innovation and entrepreneurship:

PO 7a: Demonstrate enthusiasm and understanding to identify opportunities and translate research in engineering and other disciplines to conceive and design innovative engineering solutions for business, industry, and societal problems.

PO 7b: Demonstrate enthusiasm and understanding to conceive and plan technology based new ventures either as independent start-up businesses or within existing corporate structures.

Program Specific Outcome

The Mechanical Engineering graduates of JKLU will be able to:

MEPSO1: Conceive, design, implement, and manage mechanical systems, components, and processes by using principles of machine design, production engineering, thermal engineering, computing, automation, sustainability and contemporary materials and tools.

MEPSO2: Serve in fields of engineering services, manufacturing, automobile, energy, EPC and mechatronics.

Desired minimum level of competence for POs and PSOs

PO/PSO	Competence Level
PO 1	Competent
PO 2a	Novice
PO 2b	Novice/Advanced Beginner
PO 2c	Novice
PO 3a	Competent
PO 3b	Advanced Beginner
PO 3c	Advanced Beginner
PO 4a	Advanced Beginner
PO 4b	Advanced Beginner
PO 4c	Novice
PO 5a	Advanced Beginner
PO 5b	Advanced Beginner
PO 6	Advanced Beginner
PO 7a	Advanced Beginner
PO 7b	Novice
MEPSO 1	Competent
MEPSO 2	Competent

Following process has been adopted to create Course Articulation Matrix (CAM) and Program Articulation Matrix (PAM).
- Course Outcome of each Course is mapped to Program Outcome (PO) / Program Specific Outcome (PSO) using three Levels viz., Low Correlation (1), Moderate Correlation (2) and Substantial Correlation (3).

- Average of these Levels of each Course Outcome w.r.t each specific PO/PSO is calculated and it indicates expectations laid in a course to attain different PO/PSO. In order to avoid over commitment of a course w.r.t its contribution to POs/PSOs, the following validation check is applied on the sum of PO/PSO wise averages in each course.

$$\sum (Average) <= Min (Credits * Year, 15)$$

In above equation, Credits are the credits assigned to the course, Year indicates the level of the students from 1st to 4th year. In case this sum exceeds the upper limit, CO-PO mappings are revised. This check ensures that early or low credit courses are not over burdened with very high expectations.

- For creation of Program Articulation Matrix, sum of these averages of different courses w.r.t each PO/PSO is calculated and interpreted as per following Table.

Competence Level *	B.Tech
Novice	<8
Advanced Beginner	8 - 16
Competent	>=16

Novice* (N): Knows objective facts, features, and rules for determining actions w.r.t this PO/PSO without being context-sensitive. The student has studied the basic concepts.
Advanced beginner* (AB): Recognizes common situations w.r.t this PO/PSO that help in recalling which rules should be exercised, starts to recognize and handle situations not covered by given facts, features and rules. The student has problem-solving and repeated practice experience for common situations w.r.t. this PO/PSO.
Competent* (C): Performs most standard actions w.r.t. PO/PSO without conscious application of rules after considering the whole situation. Handles new situations through the appropriate application of rules, can design systems, and may lead. Has demonstrated this PO/PSO through repeated engagements in advanced problem-solving, projects, extensive practice in common and exception situations, and participated in professional networks.

	Total Credits							168

- Minimum required credit – 160
- A student can choose to drop DE/OE and still complete the minimum credit requirement of 160 for completion of B.Tech.
- Credits can vary for specific (*) courses.

List of Electives	
Sem V	
DE-I (Tentative)	**OE-I (Tentative)**
Computer Integrated Manufacturing- ME1212	Urban and Regional Planning- CE1215
Ventilation and Air Conditioning	Introduction to User-Experience- IL1204
	Idea to Business Model- ED1102
	Energy Management System
	Speech Processing
	Computer Architecture and Operating Systems
	Numerical Methods- AS1204
Sem VI	
Emerging Tech week (Tentative)	
Robotic Process Automation Lab-CS1125	
Geographical Information Systems Lab-CE1114	
DE-II, III (Tentative)	**OE-II (Tentative)**
Computer Aided Product Design and Manufacturing- ME1210	Electric Vehicle Technology-EE1220
Refrigeration and Air Conditioning- ME1205	Green Energy- IL1202
Contemporary Production Technology-ME1214	Mechatronics-ME1207
	Modern Physics
	Introduction to Nano Technology
	Introduction to Quantum Computing
	Engineering Optimisation
	Integral Transforms
	Algorithm Design and Analysis-CS1126
	Virtualisation and Cloud Computing-CS1127
	Disaster Management-CE1206
Sem VII	
DE-IV, V, VI (Tentative)	**OE-III (Tentative)**
IC Engine- ME1201	Geographical Information System- CE1214
Power Plant Engineering- ME1203	Operations Research- AS1201
Vehicle Aerodynamics- ME1213	Fintech in Retail Banking and Insurance- FA1151
Modelling of Engineering Materials- ME1209	Advanced Statistics- AS1202
Industrial Robotics- IL2203	
Mechanical Vibration- ME1208	

NOTE:
1. For every credit, in each course, every student is expected to put in a total work of 35-36 hours including the class time. The specified teaching scheme is applicable if the course is taught as full semester course. However, sometimes, a few courses may actually be completed in a shorter duration by increasing the weekly contact hours.
2. Students have the option for earning additional Minor certification from CSE and also in Cyber-Physical Systems (through electives/minor project, 16 Credits) or a Concentration in Automobile Design and Engineering or Automation and Robotics (through electives, 12 credits).
3. Learning outcomes focus on higher order thinking and practical skills. Rote learning is completely de-emphasized and assessment scheme includes several components like assignments, labs, projects, reports etc. The exams are designed to assess problem solving ability through questions focusing on analysis, synthesis, and evaluation.
4. Emerging Tech Week in the VI semester is a slot in which the actual course is decided flexibly. The course has to be in an emerging technology area. Students have the option to replace the course on Emerging Tech Week by a Department elective or Open elective.
5. Relevant engineering standards and sustainability issues are incorporated in all engineering courses.
6. Student can optionally take upto four Independent Study courses with 2 credits each to complete their credit requirement.
7. Students can optionally undergo additional summer internship of 2 credits each after first year and third year to complete their credit requirement.
8. A student may sometimes be allowed to take a few additional courses for earning extra credits, fulfilling credit deficiency or completion of academically equivalent core course requirements in special cases, e.g., lateral entry/transfer cases, semester exchange at partner universities, medical cases, student detention, backlog, etc.

INDEX OF COURSE DESCRIPTIONS

ES1101: Computational Data Analysis
L T P: (10s 2 0)   **Credits: 10**
Course Description: This course introduces computational analysis of data based on Linear Algebra Principles and Statistics. The computational analysis will include learning and utilizing Python as a programming language.

Course Outcomes
After course completion, the student will be able to
ES1101.1. Write Simple Python programs using various datatypes, control structures, decision statements, libraries, functions (M1)
ES1101.2. Develop Python programs using Objects, Classes and Files (M1, M2)
ES1101.3. Develop Programs for analyzing and interpreting Complex situations in various domains including sustainable development by combining various Linear Algebra, Statistics and Other Problem-Solving Techniques (M3)
ES1101.4. Model Complex systems as Linear simultaneous equations and analyze the same using Matrix methods (M1)
ES1101.5. Model Data as matrices and Find Eigen Values and Eigen Vectors and Apply the same for problem solving, e.g., ranking and performance analysis (M1)
ES1101.6. Summarize and Visualize different datasets (M2)
ES1101.7. Analyze and interpret different datasets using Discrete and Continuous Probability Distributions and Apply the same for problem solving, e.g., Goodness of Fit (M2)
ES1101.8. Formulate and validate hypothesis with reference to different datasets (M2)
ES1101.9. Apply correlation, regression, least square method and time series analysis for modeling, analysis, interpretation and forecasting (M2)

Hours per week	**L T P: 3 0 0**
Credits	**3**
Students who can take	**B. Tech Semester-I (Batch: 2020-2024)**

Objective of the course:
The students will be trained to analyze an unknown situation through critical thinking and formulate it into a known problem so that solutions can be found. Once solution found, student will be able to use engineering tools to convert a conceptual idea in to a 3D Drawing.

Course Outcomes:
On successful completion of this course, the students should be able to:

ES1110.1. Approach design challenges from the perspective of the user and offer innovative solutions effectively.

ES1110.2. Communicate and work in team towards a common goal.

ES1110.3. Think creatively towards a desirable solution.

ES1110.4. Develop the projection views of the products with dimensions and scales.

ES1110.5. Create the schematic diagram and isometric view of the parts using software.

Syllabus

Design thinking:

- Various stages of the design process vis a vis problem identifying, framing, empathy-building ideation, prototyping, etc. and exposure to a variety of processes and methodologies applied by design professionals in various relevant contexts.
- understanding the tools of design research methodology through project focused case studies.

Introduction to Engineering Drawing, Orthographic Projections:

Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Scales – Plain and Diagonal Scales. Angle of projection, projection of point, line and plane.

Introduction to Engineering Materials

Introduction to materials- ferrous and non-ferrous materials, aluminum, wood, plastics. Properties of materials- ductility, brittleness, toughness, resilience, hardness, etc. Materials for 3D-printing

Drawing using AutoCAD:

Introduction to AutoCAD, drawing commands, editing commands, annotate commands, layers.

Drafting using AutoCAD:

Layout, view arrangements, dimensioning, annotation, bill of materials.

Hours per Week	**L-T-P: 3-0-0**	
Credits	**3**	
Students who can take	B. Tech Sem I (All programs)	

Course Objective- Automation engineers design, program, simulate and test automated machinery and processes. This course is aimed at building key technical competencies needed by automation engineers. It is focused on basic knowledge and critical understanding of different technologies in the design and maintenance of automation systems.

Course Outcome:

On successful completion of this course, the students should be able to:

ES1111.1 Evaluate and simplify Boolean functions and implement the minimized logic using logic gates.

ES1111.2 Simulate basic combinational and sequential circuits with minimum complexity.

ES1111.3 Model Digital system using Finite State Machine.

ES1111.4 Design circuit using semiconductor devices and passive components.

ES1111.5 Identify the components for use in ac/dc circuits and simulate their electrical response.

ES1111.6 Simulate resonance in series and parallel RLC circuits and tune the frequency and quality of resonance peak.

Course Title –Fundamentals of Communication   Course Code- CC1101

Credits 2 (2-0-1)

Course Objective

This course provides an introduction to the importance of effective communication, the consequences of poor communication, and the different elements of verbal and non-verbal communication. Students learn about, and enhance, the components of communication: kinesics, paralanguage (voice) and language.

Course Outcome

The students will be able to:

CC1101.1.   Identify different cultural differences and their impact on communication.

CC1101.2.   Compose grammatically correct sentences and paragraphs.

CC1101.3.   Deliver effective oral presentations following appropriate kinesics and paralinguistic features.

CC1101.4.   Identify impact of cultural differences on communication.

CC1101.5.   Apply appropriate communication skills across settings, purposes, and audiences.

Course Title and Code   Calculus and Applied Mechanics ES1103

Hours per Week   **L-T-P: 6s-2-0**

Credits   **6**

Students who can take   **B. Tech Semester-II (Compulsory)**

Course Objective:

This course introduces the basic elements of calculus and mechanics through some engineering projects. The application of multivariable calculus in civil and mechanical engineering is also highlighted. This course will equip students with essential domain knowledge of calculus and applied mechanics in solving basic engineering problems.

Course Outcomes:

On successful completion of this course, the student should be able to:

ES1103.1. apply analytical techniques to determine forces in structures

ES1103.2. use commercial software (STAAD Pro.) to simulate a structure/frame and determine force in the members

ES1103.3. model physical phenomena using calculus and solve using appropriate method

ES1103.4. apply Newton's laws of motion and understand the concepts of dynamics concepts (force, momentum, work and energy)

ES1103.5. interpret the geometrical significance of differential and integral calculus

ES1103.6. solve problems of vector differentiation and integration

ES1103.7. calculate the buoyant forces of objects with various shape and carryout the stability analysis

ES1103.8. apply the concept of partial differentiation to solve optimization problems

Syllabus:

Vectors Algebra: basics of vector algebra, resultant vector, Application of vector equilibrium on structures.

Force systems basic concepts, equilibrium of system of forces, free body diagrams, equations of equilibrium of coplanar systems, structures (trusses), analysis of structures, method of joints, method of section, friction, virtual work, work energy principle, impulse-momentum (linear, angular).

Function of several variables, functions of one and several variables, partial differentiation, maxima-minima.

Vector Differentiation: Vector functions and derivatives, Arc length and unit tangent vector, Curvature and unit normal vector, Directional derivative and gradient vectors, Tangent plane, Divergence and curl of a vector field

Integral Calculus, area under curve, arc length, double integral, change of order and triple integrals, surface and volume integrals, solids of revolution, moment of inertia, floatation, buoyancy, centroid

Vector Integration: Line integral, flux, work done, circulation, path independence, potential function and conservative fields, Surface area and surface integral, Green's theorem in the plane, Stoke's theorem, Divergence theorem.

Credits	3
Students who can take	B. Tech Semester-II (Batch: 2020-2024)

Course Objective:

Students will be trained to work with various design and fabrication processes in order to shape materials and will be able to assemble the desired functional prototypes.

Course Outcomes:

On successful completion of this course, the students should be able to:

ES1112.1.   Develop 3D model of the product using CAD software.

ES1112.2. Identify various hand tools used for fabrication work.

ES1112.3. Identify various machine tools used for fabrication work.

ES1112.4. Select various tools and processes for manufacturing of any desired component.

<u>**Syllabus**</u>

3D Modelling (Software OnShape):

Introduction to software OnShape, 2D drawing commands, 3DModelling command (extrude, revolve, sweep), Editing, command (hole, draft, fillet, chamfers), Patterns.

3D Assembly (Software OnShape):

Approach of assembly, assembly constrains, mechanisms.

Drafting (Software OnShape/AutoCAD):

Layout, view arrangements, dimensioning, annotation, bill of materials.

Materials:

- Types of materials generally used for fabrication work and their mechanical properties.

- Engineering uses of common metals and their alloys such as mild steel, aluminum, and other alloys.

Introduction to Workshop Practice:

- Workshop layout.

- Importance of various sections/shops of workshop.

- Types of jobs done in each shop.

- General safety rules and work procedure in workshop.

Introduction to Carpentry work:

- Applications and methods of using of carpentry tools- saw, planner, chisels, hammers, pallet, marking gauge, vice, try square, rule, etc.

- Types of woods and their applications.

- Demonstration of carpentry operations such as marking, sawing, planning, chiseling, grooving, boring, joining, etc.

- Preparation of wooden joints/ Demonstration.

- Safety precautions.

Introduction to Welding technique:

- Introduction to various welding processes like arc welding, gas welding, soldering, brazing.

- Demonstration of metal joining operations- arc welding, soldering and brazing.

- Demonstrate gas cutting operation.

- Preparation of metal joints/ Demonstration.

- Safety precautions.

Introduction to Machining:

- Introduction to various machine tools like lathe machine, drilling machine, etc.

- Demonstration of lathe machine tool.

- Demonstration of drilling machine.

- Preparation of specimen on various machine/ Demonstration.

- Safety precautions.

Introduction to Fitting work:

- Introduction to various tools like, work holding tools-bench vise, V-block with clamp and C-clamp.

- Introduction to fitting marking and measuring tools-marking table, surface plate, angle plate, universal scribing block, try-square, scriber, divider, centre punch, letter punch, calipers, vernier caliper, etc.

- Introduction to various fitting cutting tools, hacksaw, chisels, twist drill, taps, files, dies, etc.

- Introduction to various other tools like fitting finishing tools-files, reamers, tools-hammer, spanners, screw drivers sliding screw wrench.

- Demonstration of various fitting operations such as chipping, filing, scraping, grinding, sawing, marking, drilling, tapping.

- Preparation of simple product/ Demonstration.

- Safety precautions.

Introduction to 3D Printing

- Introduction to 3D printing machine,

- Introduction to types of materials used for 3D printing.

- Preparation of simple product/Demonstration.

- Safety precautions.

Introduction to Laser Cutting

- Introduction to laser cutting machine,

- Introduction to types of materials used for laser cutting.

- Preparation of simple product/Demonstration.

- Safety precautions.

Hours per Week	**L-T-P: 3-0-2**
Credits	**3**
Students who can take	B.Tech Sem II CSE/EEE/ME/CE

Course Objective- This course aims at building key technical competencies needed by automation engineers. It is focused to simulate/implement a complete solution of automation problems including power supply, sensor, actuator, sensitized with energy usage and effects on environment.

Course Outcome:

On successful completion of this course, the students should be able to:

ES1113.1. Analyze electrical circuits using network theorems and measure electrical parameters.

ES1113.2. Use electrical safety practices while working on electrical projects.

ES1113.3. Formulate mathematical models for basic mechanical and electro-mechanical systems

ES1113.4. Develop transfer function and simulate dynamic response of a system for bounded inputs.

ES1113.5. Classify Embedded Systems and enlighten architecture of MSP430.

ES1113.6. Explain different sensors and displays for different applications.

ES1113.7. Develop embedded system for various real time applications.

Course Name: Object Oriented Programming   **Course Code: CS1101**
L-T-P: 1-0-4   **Credits: 3**

Course Description: This course teaches object-oriented programming to those who have learnt basic programming concepts and are ready to learn in-depth programming. It focuses on object-oriented programming using JAVA. The main concepts are: Classes, Objects, Data Abstraction, Data Encapsulation, Overloading, Overriding, Polymorphism, Inheritance, Interfaces, Exception Handling, and Database Connectivity. This course also covers basic concepts for software design and reuse.

Course Outcomes:
On successful completion of this course, the students should be able to:
CS1101.1.   Develop Java Programs with the concepts of primitive data types, strings and arrays.
CS1101.2.   Develop Java Programs using Object Oriented Programming Principles such as Classes, Objects, Data Abstraction, Data Encapsulation, Overloading, Overriding, Polymorphism, Inheritance, and Interfaces.
CS1101.3.   Design, develop and debug programs in Core Java using coding and documentation standards.
CS1101.4.   Incorporate exception handling in Java Programs.
CS1101.5.   Use JDBC API connectivity in between Java Programs and database.

Basics of Java & Decision Statements - Introduction to Java**:** Features of Java, Byte Code and JVM, JDK, JRE; Data types and Operators: Lexical Tokens, Identifiers, Keywords, Literals, Comments, Primitive Datatypes, ADT, Operator types and precedence, Statements and Flow Control: Conditional statements, looping, return, etc., Abstract data types and their specification. How to implement an ADT. Concrete state space, concrete invariant, abstraction function.

Control Structures, Methods & Constructors - Object Oriented Programming in Java: Object Life time & Garbage Collection.

Methods & Constructors - Constructor & initialization code block, Parameterized Constructor, Loops, Methods.

Array & String - Defining an Array, Initializing & Accessing Array, Multi –Dimensional Array, Operation on String, Mutable & Immutable String, Collection Bases Loop for String, tokenizing a String, Creating Strings using StringBuffer.

OOP's Concept I - Class Fundamentals, Object & Object reference, Access Control, Modifiers, Methods in Java: Method Declarations, Method Signatures, Invoking Methods,

OOP's Concept II - Static vs. Instance Data Fields, Static vs. Instance Methods, Method Overloading, Encapsulation.

Inheritance, Composition, and Aggregation, Invoking Base Class Constructors, Overriding vs. Overloading, Polymorphism Overloading.

Interfaces - Inner Class & Anonymous Classes, Abstract Class, Interface**s.**

Exception Handling - Introduction to Exception handling.

JDBC Programming - The JDBC Connectivity Model, Database Programming: Connecting to the Database, Creating a SQL Query, Getting the Results, and Updating Database Data.

NOTE: Integrated Development Environments (IDEs) to be used in this Course are Eclipse or NetBeans – Both are compatible for Object Oriented Programming using Java.

Course Title and Code: Experimental Science: AS1101

Hours per Week	**L-T-P: 1-0-4**
Credits	**3**

Course Objectives:

This course is designed to familiarize the student with the fundamental concepts of different phenomenon related with optics, electrical & electronics, modern physics, properties of water and lubricants. This course will expose the students with experimental methods of physics, chemistry and integrates theoretical knowledge and concepts to practical experience.

Course Outcomes:

On successful completion of this course, the students will be able to:

AS1101.1. analyze ferromagnetic properties of any magnetic material and differentiate Soft and hard materials.

AS1101.2. analyze thermoelectric effect of metal junctions due to temperature differences.

AS1101.3. analyze nuclear radiation with respect to distance and thickness of absorbing media.

AS1101.4. measure electrical properties e.g., specific resistance, time constant of various electrical components.

AS1101.5. use Schroedinger equation and quantum mechanical approach to analyze behavior of the quantum particle under different potentials.

AS1101.6. differentiate hard and soft water by determining its hardness of different water samples.

AS1101.7. analyze conductivity of samples by different techniques such as volumetric titrations and conductometric.

AS1101.8. determine properties of the lubricant/oil samples by Pensky-Martens and Red Viscometer.

Course Title and Code Critical Thinking and Storytelling   CC1102

Hours per Week	**L-T-P: 2-0-1**
Credits	**2**
Students who can take	**B. Tech Semester-II (Compulsory)**

Course Objective:

The modern world offers confounding opinions and choices that need to be navigated judiciously. This course explores frameworks and processes to critically examine narratives, reconstruct them, and craft well-reasoned stories that can be told using impactful communication.

Course Outcomes:

On successful completion of this course, the student should be able to:

CC1102.1.   Formulate intelligent questions to investigate.

CC1102.2.   Evaluate information and argument for correctness, consistency, relevance and validity.

CC1102.3.   Compose well-structured and well-reasoned arguments.

CC1102.4.   Articulate and evaluate the impact of narratives.

CC1102.5.   Distinguish between facts, assumptions and opinion.

Syllabus:

Introduction to Critical Thinking- Definitions of Critical Thinking, its applications and the methods to think critically. Paul & Elder model will be used.

Importance of questioning-The key to critical thinking is the ability to formulate intelligent questions. Students will be able to create, improve and prioritize their questions. They will be able to use different types of question by using Bloom's taxonomy to understand the root of any situation, problem or subject.

Examine data Critically-Students will be able to filter information, separate fact from opinion, identify cognitive biases and become aware of the ladder of inference. They will also be taught to conduct responsible research and basics of bibliography and citation.

Construct and reconstruct argument- Students will be taught to construct arguments with sound reasoning. They will be able to support their claims and opinions with compelling data and facts, and present well-informed arguments. Evaluate argument using logical fallacies.

Building a compelling Narrative- Stories that we create and narrate influence how we see ourselves and our association with others. The students will be able to observe, think, create and narrate their stories in an effective manner.

Students who can take	**B. Tech Semester-III**

Course Objective:

The main objective of the course is to impart knowledge of materials engineering so that students can able to identify crystal structure, crystal defects, select suitable material for application based components, and control their mechanical properties.

Course Outcomes:

On successful completion of this course, the students will be able to:

ME1101.1: Identify crystal structure, crystal defects and perform various mechanical tests as per ASTM standards to know properties of materials.

ME1101.2: Evaluate materials on the basis of their static and dynamic failure criteria as per ASTM standards.

ME1101.3: Perform various heat treatment processes to hold required mechanical properties in ferrous alloys.

ME1101.4: Prioritize other ferrous and non-ferrous alloys for various applications.

COURSE SYLLABUS (Theory):

UNIT - I
Crystal Structure: Unit cells, Metallic crystal structures, Ceramics.
Imperfection in Solids: Point, line, interfacial and volume defects; dislocation strengthening mechanisms and slip systems, critically resolved shear stress. **(6)**
Mechanical Property Measurement: Tensile, compression and torsion tests; Young's modulus, relations between true and engineering stress-strain curves, generalized Hooke's law, yielding and yield strength, ductility, resilience, toughness and elastic recovery;
Hardness: Rockwell, Brinell and Vickers and their relation to strength. **(6)**

UNIT - II
Static failure theories: Ductile and brittle failure mechanisms, Tresca, Von-mises, Maximum normal stress, Mohr-Coulomb and Modified Mohr-Coulomb;
Fracture mechanics: Introduction to Stress-intensity factor approach and Griffith criterion.
Fatigue failure: High cycle fatigue, Stress-life approach, SN curve, endurance and fatigue limits, effects of mean stress using the Modified Goodman diagram; Fracture with fatigue, Introduction to nondestructive testing (NDT) **(8)**

UNIT - III
Phase Diagram: Alloys, substitutional and interstitial solid solutions- Phase diagrams: Interpretation of binary phase diagrams and microstructure development; eutectic, peritectic, peritectoid and monotectic reactions. Iron Iron-carbide phase diagram and microstrctural aspects of ledeburite, austenite, ferrite and cementite, cast iron. **(6)**
Heat treatment of Steel: Annealing, tempering, normalising and spheroidising, isothermal transformation diagrams for Fe-C alloys and microstructure development. Continuous cooling curves and interpretation of final microstructures and properties- austempering, martempering, case hardening, carburizing, nitriding, cyaniding, carbo-nitriding, flame and induction hardening, vacuum and plasma hardening. **(6)**

UNIT - IV
Ferrous and Non Ferrous Alloys: Alloying of steel, properties of stainless steel and tool steels, maraging steels- cast irons; grey, white, malleable and spheroidal cast irons- copper and copper alloys; brass, bronze and cupro-nickel; Aluminium and Al-Cu – Mg alloys- Nickel based super-alloys and Titanium alloys
(8)

COURSE SYLLABUS (Practical):
1. To evaluate microstructure of various metallic materials and prepare a comparative report.
2. To perform Tensile Test and know the tensile properties of the metallic materials
3. To perform Impact Test and know about the toughness of the metallic materials
4. To perform Hardness Test and know about the hardness value of the metallic materials
5. To perform Torsion Test on the metallic materials and calculate torsional rigidity of the materials.
6. To perform Fatigue Test on the metallic materials
7. To perform Compression Test on the metallic materials

8. To perform and compare various Heat Treatment (Anealing, Normalizing, Quenching) cycles.
9. To perform Heat Treatment cycle to understand Case Hardening.
10. Study of various ferrous and non-ferrous materials
11. Effect of strain rate on various properties of materials

Course Title and Code: Engineering Thermodynamics ME1102	
Hours per Week	**L-T-P: 3-0-2**
Credits	**4**
Students who can take	**B. Tech Semester-III (Core)**

Course Objective:

The objective of the course is to develop understanding of mass, energy, heat, work, efficiency, ideal and real thermodynamic cycles and processes. This also covers first and second laws of thermodynamics, perfect gas law, properties of real gases, and the general energy equation for closed and open systems.

Course Outcome:

On successful completion of this course, the student should be able to:

ME1102.1: identify the basic thermodynamic processes in our day to day life and industrial processes

ME1102.2: judge the state of the pure substances such as compressed liquid, saturated liquid-vapor mixture and superheated vapour using property diagrams and tables.

ME1102.3: apply the first law of thermodynamics to analyse the working of the nozzles, diffusers, turbines, compressors, throttling valves, mixing chambers, heat exchangers, pipe and duct flow

ME1102.4: construct energy and mass balance for unsteady-flow processes.

ME1102.5: assess thermodynamic applications using second law of thermodynamics to power and refrigeration cycle.

Syllabus:

Areas of Application of Thermodynamics, Different Approaches in the study of Thermodynamics, SI Units, Definitions and Concepts: System, Energy, Work; Thermodynamic equilibrium, Properties, Heat & Work, System, Surroundings, Types of Systems, Intensive and Extensive Properties, Energy, Macroscopic modes of Energy, Microscopic modes of Energy, Thermodynamic Equilibrium, Process, Work, Thermodynamic Definition of Work , Heat, Introduction to state postulate, Zeroth Law of Thermodynamics, Temperature Scale , Perfect Gas Scale .

First-Law of Thermodynamics and Analysis of Closed Systems: First Law of Thermodynamics, Heat is a Path Function, Energy is a Property of the System, A Perpetual Motion Machine of First Kind, Analysis of Closed Systems, Characterisation of Reversible Adiabatic Process, Polytropic Process, Ideal Gas Model.

First-Law of Thermodynamics for the Flow Processes: Conservation of Mass applied to a control volume, Conservation of Energy applied to a Control Volume, Steady State Flow Processes, Application of Steady State Flow Processes, Throttling Process, Application of Throttling Process .

Thermodynamic Properties of Pure Substances: Thermodynamic Properties of Fluids, Pure substance, Equations of State, Ideal Gas, Thermodynamic diagrams and tables, phase-Change Process of Pure Substances, Specific internal energy and enthalpy, Steam Tables.

Second Law of Thermodynamics, Entropy and Availbility: Limitations of First Law of Thermodynamics, Heat Engine, Heat Pump, Refrigerator, Kelvin Planck Statement, Clausius Statement of the Second Law, Reversibility, Irreversibility and Carnot cycle Carnot's Principles (Theorems), Thermodynamic Temperature Scale, Reversible Cycles and Clausius Inequality

Entropy: Concept of Entropy, Principle of Entropy Increase, calculation of entropy change. Temperature Entropy Diagram & Second Law Analysis of a Control Volume:Temperature Entropy Diagram, Second law analysis of a control volume, Steady-state steady-flow processes, TdS Equations, Entropy change of

an incompressible substance, criterion of equilibrium, Thermodynamic definition of temperature, pressure and chemical potential, Thermodynamic potentials.

Availability & Irreversibility: Availabilty Function and Irreversibility: Introduction, Availability Function for a non-flow Process, Availability Function of Flow Processes, Irreversibility.

Power and Refrigeration Cycles: Introduction, Practical Rankine Cycle, Reheat Cycle (continuation of Rankine cycle), Regenerative Cycle, Binary Vapor Cycle. Introduction to Gas Power Cycles: Introduction, Air standard Otto Cycle, Air standard Diesel Cycle. Air Standard Dual Cycle, Comparison of Otto, Diesel & Dual Cycles, Air Standard Brayton Cycle. Reversed Carnot Cycle as a Refrigeration Cycle, Vapour Compression Cycle, Refrigerants, Absorption Refrigeration System, Heat Engine, Gas Refrigeration Cycle.

Thermodynamic Relations: Introduction, Important Mathematical Relations, Jacobian Method, Cyclic Rule, Maxwell Relations, Thermodynamic Relations involving Entropy Clapeyron Equations: Clapeyron Equations, Kirchhoff's equations, Change of Latent Heat with Temperature.

Course Title and Code: Computational Engineering Analysis-I: ES1106		
Teaching Scheme	L-T-P: 3-1-2	
Credits	5	
Students who can take	B.Tech. Sem III (All)	

Course Objective

This course introduces the concepts of Ordinary Differential Equations (ODE), Functions of Complex variables and Laplace transform in the context of engineering applications. Civil, mechanical & electrical systems will be modeled and analyzed w.r.t forces and stability. Appropriate numerical methods and simulation tools will also be used.

Course Outcomes:

On successful completion of this course, the students will be able to:

ES1106.1. Solve ordinary differential equations through various techniques.

ES1106.2. Determine the structural behavior of the body by determining the stresses, strains produced by the application of load.

ES1106.3. Analyze the concept of buckling and be able to solve the problems related to column and struts.

ES1106.4. Model the problems of column and struts mathematically in terms of ordinary differential equations and solve them using the appropriate method.

ES1106.5. Simulate the solutions of the above-mentioned models of columns and struts.

ES1106.6. Analyze a function of complex variables in terms of analyticity, poles and zeroes.

ES1106.7. Find Laplace transform and inverse Laplace transforms of given function and use Laplace transform to solve ordinary differential equations.

ES1106.8. Design and Evaluate the LC, RC & RL Networks using Foster's and Cauer Forms.

ES1106.9. Analyze stability criteria for electrical network using pole zero plot and routhhurwitz polynomials.

ES1106.10. Model and simulate electrical networks using open-source simulator/ Virtual lab.

Syllabus

ODE: Ordinary differential equations of first order and first degree, higher order ODEs with constant coefficients, Differential equation of second order with variable coefficients, Numerical solution of ODEs.

Applications of ODE in structural analysis : column and struts - Definitions, Classifications, Assumptions made in the Euler's Column Theory, Expressions for crippling load of different cases like both the ends are hinged or pinned, one end is fixed and other is free, both ends are fixed, one end is fixed other is hinged, Effective length of column, Slenderness ratio, Crippling stress in terms of Effective length and radius of gyration, limitations of Euler's Formula, Rankine's Formula, Eccentric loading, Johnson's Formula for Columns, both straight line and parabolic formula for columns.

Functions of Complex variables: Complex numbers, complex conjugates, functions of complex variables, real and imaginary parts of a complex function, analytic functions, C-R equations, Poles and zeros of a complex function, Taylor's theorem and Taylor's expansion.

Laplace transform: Basic Laplace transform and inverse Laplace Transforms, solution of ODEs using Laplace transform, solution of system of ODEs using Laplace transform.

Network Functions: Concept of complex frequency, transform independence, network functions of one and two port network, concepts of poles and zeros, properties of driving point and transfer functions, time response stability from pole zero plot, Routh-Hurwitz polynomials.

Network Synthesis: Positive real functions, Basic syntheses procedure, method of syntheses, driving point syntheses of one port network (R-L and R-C and R-L-C).

Transient Analysis: Modeling of Mechanical, electrical and heating systems, equivalent circuits of R, L and C elements. Complete response of RL, RC, and RLC circuits to step, sinusoidal, exponential, ramp, impulses and the combinations of excitations. Initial value and final value theorem.

Course Title and Course Code	Engineering Measurements and Machines (ES1107)
Hours per Week	L T P: 3 0 4
Credits	5
Students who can take	B. Tech Semester-III

Course Objectives:

The aim of this course is to impart the knowledge of mechanical and electrical machine used in industries. Students will learn the fundamental of engineering principles governing the engineering process in real-world. Students will get the knowledge of sensors, actuators and their selection process for any industrial application. This course complements the first-year course Fundamentals of Automation Engineering to lay the foundation for further courses in IoT areas.

Course Outcomes:

On successful completion of this course, the students be able to:

ES1107.1 Evaluate suitable electrical and non-electrical instruments for measuring physical quantities.

ES1107.2 Explain and Analyze the working of some important mechanical and electrical machine.

ES1107.3 Integrate the sensors for monitoring and automation of electrical and mechanical systems.

ES1107.4 Use electro-mechanical machines for different applications.

Syllabus (Theory):

Unit-I: Measurement, Instrumentation and Calibration

Introduction, measuring units, elements of measurng systems, applications of measurement and instrumentation, instruments types and performance characteristics, error in measurements, calibration and standards, Measuring instruments, Digital meters, Bridges, Electronic Instruments.

Unit-II: Transducers

Classification of transducers, Selection of transducers, measurement of physical quantities, Elements of data acquisition system, Smart sensors, Introduction to MEMS.

Unit-III: Transformers

Construction, principle of operation, equivalent circuit, losses, testing, efficiency and voltage regulation, auto transformer, three phase connections, parallel operation of transformers, tap changing.

Unit-IV: Rotating Machines

DC Machines

Construction, EMF and torque equation, circuit model, characteristics of generators, characteristics of motors, starting and speed control.

Induction Motors: Construction, working principle, classification and applications, equivalent circuit, starting and Speed control of induction motors.

Unit-V: Mechanical Machines

Turbines: Introduction to steam turbines, Impulse and Reaction turbines, turbine power and related calculations.

Pumps: Introduction of pumps, centrifugal pumps, working of centrifugal pumps, Cavitation and its effect on pump, working of reciprocating pumps, Application of pumps in industries.

Power Transmission Systems: Mechanical drives and their performance analysis.

List of Experiments:

Measurement

1. To study the data sheet and recognise the static characteristics.

2. To study the appliances standards in India.

3. Measurement of voltage, current and power in a circuit.

4. Measurement of pressure.

5. Measurement of resistance.

6. Measurement of inductance.

7. Measurement of capacitance.

8. Calibration of single-phase energy meter.

9. Measurement of displacement.

10. Measurement of temperature.

11. Measurement of flow.

12. Measurement of horizontal and vertical angles using Theodolite.

Mechanical Machines

13. To study the performance of turbines used in steam power plant.

14. To study the performance of belt drive system used for power transmission.

Electrical Machines

15. To perform Ratio, Polarity and Load test on a single-phase transformer.

16. To perform open circuit and Short circuit test on a single-phase transformer.

17. Speed control of DC shunt motor.

18. Starting and reversal of 3-phase Induction motor.

Course Title and Code:	Perspectives on Contemporary Issues - CC1103	
Hours per Week	**L-T-P: 2-0-1**	
Credits	**2**	
Students who can take	**B. Tech-BCA Sem III**	

Course Objective-

In an era of globalization, there is an increasing need for the youth to be able to empathize with others, value diverse perspectives and cultures and understand how events around the world are intertwined. Global issues revolve around social, economic and environmental factors which ultimately add to the interconnectedness of countries. In this course, students will employ key critical thinking concepts to analyze contemporary issues from multiple perspectives. They will explore the impact at micro and macro levels.

Course Outcomes:

On successful completion of this course, the students should be able to:

CC1103.1: Identify different perspectives objectively.

CC1103.2: Explain interconnectedness of the issues and their impact at micro and macro levels.

CC1103.3: Recognize their own beliefs, biases, claims and assumptions.

CC1103.4: Evaluate sources, argue and defend effectively.

1	Theory Exam	**30**

Syllabus (Theory):

Research, analysis & evaluation of a topic from local, national and global perspectives.

- Globalization

With increasing development throughout the world, the focus of this theme will be on the impact of adopting policy of neoliberalism globally. Changes in India after implementation of new economic policy of 1991.

- Poverty and Inequality

What do you mean by wealth & equality? Is it enough to ascribe monetary values to human lives? Who has benefited from an increased access to resources, labour & capital due to globalisation? Which groups are historically marginalised & suffer from unequal access to opportunities?

- Social justice and human rights

An understanding of the impact of inequality and discrimination, the importance of standing up for our own rights and our responsibility to respect the rights of others.

- Climate Change and Sustainability

Understanding the magnitude of the issue, its impact and future challenges. How we can meet our current needs without diminishing the quality of the environment or reducing the capacity of future generations to meet their own needs.

- Technology

Impact of unprecedented technological growth, challenges and opportunities. Is technocracy a boon or a bane?

Course Title and Code:	Management Perspectives / IL1101
Hours per Week	L-T-P: 2-0-0
Credits	2
Students who can take	B. Tech Sem-III (All branches)

Course Objective- The present course is an introductory and integrative action encapsulated course designed for the engineering students to introduce them to management discipline and the core functional areas contributing to it. This course adopts the integrated problem-oriented approach via the use of cases and simulation. It implies that complex business problems, in the form of cases and simulations require students to understand different dimensions of the problem and come up with holistic solutions. The course will help students to be familiar with trending management issues and at the same time apply the knowledge gained.

Course Outcome:

On successful completion of this course, the students should be able to:

IL1101.1: Comprehend the importance of management and its functional areas in businesses and its interaction with technology.

IL1101.2: Highlight specific external and internal issues impacting businesses.

IL1101.3: Integrate and analyze multiple dimensions of management aspects to solve business problems.

IL1101.4: Evaluate the aspects that management might consider when evaluating technical and engineering projects such as planning and scheduling, personnel management, cost control etc. from a management perspective

Syllabus (Theory):

HR

1. Business organization- Current challenges
2. HR and its growing importance.
3. Overview of people management systems

4. Recent trends shaping HR.

Marketing:
1. Marketing Process
2. Elements of Marketing Mix
3. Segmentation, Targeting and Positioning

Finance and Accounts:
1. Understanding Accounting Terms
2. Overview of Financial Reports, viz., Balance Sheet, Income Statement, Cash Flow Statement
3. Interface of Balance Sheet and Income Statements
4. Types of Costs and assessing and ascertaining Costs
5. Financial Statement Analysis

Course Title and Code: Transport Phenomena ME1104	
Hours per Week	**L-T-P: 3-0-2**
Credits	**4**
Students who can take	**B. Tech Semester-IV (Core)**

Course Objective:

The objective of this course is to introduce the concepts of transport phenomena, which deals with the movement of different physical quantities such as momentum, energy and mass in any chemical or mechanical process and combines the basic principles (conservation laws) and laws of various types of transport. The topics included in this course are aimed to prepare a student to build a good fundamental background useful in the application-intensive courses covering hydraulics and energy transfer equipment design in later semesters.

Course Outcomes:

On successful completion of this course, the student should be able to:

ME1104.1:   identify the basic transport processes in our day to day life and industrial processes

ME1104.2:   apply the continuity, momentum and energy principles and dimensional analysis

ME1104.3:   formulate and analyse a heat transfer problem involving any of the three modes of heat transfer

ME1104.4:   apply the appropriate correlations to calculate heat transfer coefficient and heat flux for a range of heat transfer situations (Steady and unsteady)

ME1104.5:   design and model a real life low energy heat transfer equipment as per ASME standard

ME1104.6:   Analyse the combined effect of heat, mass and momentum transport in a typical chemical engineering equipment (heat exchanger, catalyst bed, chemical reactor, etc.)

Syllabus:

Momentum Transport:

Basic Concepts and Definitions – Distinction between a fluid and a solid; Density, Specific weight, Specific gravity, Kinematic and dynamic viscosity, Newton law of viscosity, vapour pressure, boiling point, cavitation, surface tension, capillarity, Bulk modulus of elasticity, compressibility.

Fluid Statics - Fluid Pressure, Pascals law, pressure variation with temperature, density and altitude. Piezometer, U-Tube Manometer, Single Column Manometer, U Tube Differential Manometer, Micromanometers, Hydrostatic pressure and force: horizontal, vertical and inclined surfaces. Buoyancy and stability of floating bodies.

Fluid Kinematics-Classification of fluid flow: steady and unsteady flow, uniform and non-uniform flow, laminar and turbulent flow, rotational and irrotational flow, compressible and incompressible flow, ideal and real fluid flow, one, two and three dimensional flows, Stream line, path line, streak line and stream tube, stream function, velocity potential function. One-, two- and three -dimensional continuity equations in Cartesian coordinates

Fluid Dynamics- Surface and body forces, Equations of motion - Euler's equation, Bernoulli's equation – derivation, Energy Principle, Practical applications of Bernoulli's equation, venturimeter, orifice meter and pitot tube, Momentum principle, Forces exerted by fluid flow on pipe bend, Vortex Flow – Free and

Forced, Dimensional Analysis and Dynamic Similitude - Definitions of Reynolds Number, Froude Number, Mach Number, Weber Number and Euler Number, Buckingham's π-Theorem.

Energy Transport

Energy equation, Derivation of heat balance equation- Steady one dimensional solution for conduction heat transfer in Cartesian, cylindrical and spherical geometry, concept of conduction and film resistances, critical insulation thickness, lumped system approximation and Biot number, heat transfer through pin fins.

Convection: basic equations, boundary layers- Forced convection, external and internal flows, Natural convective heat transfer- Dimensionless parameters for forced and free convection heat transfer- Correlations for forced and free convection- Approximate solutions to laminar boundary layer equations (momentum and energy) for both internal and external flow- Estimating heat transfer rates in laminar and turbulent flow situations using appropriate correlations for free and forced convection.

Radiation**:** Interaction of radiation with materials, definitions of radiative properties, Stefan Boltzmann's law, black and gray body radiation, Calculation of radiation heat transfer between surfaces using radiative properties, view factors and the radiosity method

Mass Transport:

Introduction mass transfer, Diffusion mass transfer, Fick's law of diffusion, Steady state molecular diffusion, Convective mass transfer and mass transfer coefficient, Interphase mass transfer, Momentum, heat and mass transfer analogy.

Distillation: Vapour liquid equilibrium, Flash vaporization, steam distillation, batch distillation, and continuous multistage fraction of binary mixtures.

Drying of wet solids: Physical mechanism of drying, drying equilibria, drying rate curve, calculation of the drying time from the drying rate data, classification of drying equipment. Adsorption: Commercial adsorbents and their applications, characteristics and properties of adsorbent, Adsorption equilibria, selection of adsorbents, adsorbent equipments.

Lab Experiments:

Measurement of viscosity, Study of Pressure Measuring Devices, Stability of Floating Body, Hydrostatics Force on Flat Surfaces/Curved Surfaces, Verification of Bernoulli's Theorem, Venturimeter, Orifice meter, Impacts of jets, Flow Visualisation -Ideal Flow Length of establishment of flow, Velocity distribution in pipes, Laminar Flow, Convective heat transfer (Numerical). Solid/ liquid in air diffusion.

Course Objective:

The key objective of this course is to acquaint the students with fundamentals of stress and strain for 1-D, and 2-D systems, factors cause failure and theories to avoid failure.

Course Outcomes:

On successful completion of this course, the students will be able to:

ME1105.1: identify stress and strain present in a mechanical system.

ME1105.2: analyze and evaluate 1-D and 2-D stress tensor in a specimen.

ME1105.3: analyze shear force and bending moment diagrams for a beam under different loading conditions.

ME1105.4: design shafts against torsion load for different application.

ME1105.5: design columns against buckling load for various end conditions.

COURSE SYLLABUS (Theory):

UNIT 1 Stresses and Strains
Simple Stresses and Strain: Introduction, Definition and concept and of stress and strain. Hooke's law, Stress-Strain diagrams for ferrous and non-ferrous materials, factor of safety, Elongation of tapering bars of circular and rectangular cross sections, Elongation due to self-weight. Saint-Venant's principle, Compound bars, Temperature stresses, Compound section subjected to temperature stresses, state of simple shear, Elastic constants and their relationship.

Unit II Multiaxial Stress-Strain System
Introduction to Biaxial stresses, state of stress at a point, General two-dimensional stress system, Principal stresses and principal planes, Mohr's circle of stresses and Introduction to Theories of Failure.
Thin and Thick Cylinders (Cartesian Coordinates): Introduction, Thin cylinders subjected to internal pressure; Hoop stresses, Longitudinal stress and change in volume. Thick cylinders subjected to both internal and external pressure; Lame's equation, radial and hoop stress distribution.

UNIT III Theory of Beams
Introduction to types of beams, supports and loadings. Definition of bending moment and shear force, Sign conventions, relationship between load intensity, bending moment and shear force. Shear force and bending moment diagrams for statically determinate beams subjected to points load, uniformly distributed loads, uniformly varying loads, couple and their combinations, Deflection of beams by Double integration method–Macaulay's method–Area moment theorems for computation of slopes and deflections in beams –Conjugate beam method.

UNIT IV Bending and Torsion
Theory of simple bending –bending stress and shear stress in beams, assumptions, bending equation, modulus of rupture, section modulus, flexural rigidity, Bending and shear stress distribution diagrams for circular, rectangular, 'I', and 'T' sections.
Introduction, pure torsion, Assumptions, Torsion equation for circular shafts, torsional rigidity and polar modulus Power transmitted by a shaft, combined bending and torsion.

UNIT V Column and Struts and Introduction to 3-D stresses
Introduction, short and long columns. Euler's theory; Assumptions, Derivation for Euler's Buckling load for different end conditions, Limitations of Euler's theory. Rankine-Gordon's formula for columns. Fundamentals of theory of elasticity.

COURSE SYLLABUS (Practical):
1. To evaluate stress strain curve for tension test on a standard Mild Steel specimen on Universal Testing Machine UTE-20.
2. To evaluate stress strain curve for compression test on a standard Mild Steel specimen on Universal Testing Machine UTE-20.
3. To conduct impact test on a mild steel specimen, IT-30.
4. To conduct torsion test on a mild steel specimen, TTE-10.
5. To conduct Rockwell Hardness Test.

6. To conduct Brinell's Hardness Test.
7. To conduct Vickers Hardness Test, VM-50.
8. To conduct fatigue test on Fatigue Testing machine, FTG 8(D).
9. To conduct bending stress in a beam, STR 5.
10. To write a MATLAB program to generate principle stress, shear stress of a given element and plot the same.
11. To write a MATLAB program to generate 2-D principle stress, shear stress of a given element and plot the same.
12. To write a MATLAB program to generate Mohr's Circle of a given element and plot the same.
13. To develop a CAD Simulation model of Mild steel specimen for conducting simulation.
14. To develop a CAD Simulation model of Aluminum specimen for conducting simulation.

Credits	**4**
Students who can take	**B. Tech Semester-IV**

Course Objective:

To impart knowledge about principles/methods of casting with knowledge of pattern, molding, casting methods in order to get sound casting. To impart knowledge about welding processes in order to get sound permanent joints of metal and metal alloys. To impart knowledge of working principles of various non-conventional and advanced machining processes.

Course Outcomes:

On successful completion of this course, the students will be able to:

ME1106.1: Design molding system to obtain defect free cast.

ME1106.2: Analyze various welding processes for different applications.

ME1106.3: Identify non-conventional manufacturing process to manufacture intricate shaped product accurately.

ME1106.4: Identify latest manufacturing systems and processes for manufacturing of components.

Prerequisites: Basics of Materials Engineering

Course Syllabus (Theory)

Conventional Manufacturing processes:

UNIT-I
Casting and molding: Metal casting processes and equipment, Heat transfer and solidification, shrinkage, gating system design, riser design, casting defects and residual stresses.
Melting Practices: Cupola, Induction Furnaces

UNIT-II
Joining/fastening processes: Physics of welding, brazing and soldering; design considerations in welding, Solid and liquid state joining processes, welding defects; Adhesive bonding.

Unconventional Machining Processes:

UNIT-III
Abrasive Jet Machining, Water Jet Machining, Abrasive Water Jet Machining, Ultrasonic Machining, principles and process parameters.
Electrical Discharge Machining, principle and processes parameters, MRR, surface finish, tool wear, dielectric, power and control circuits, wire EDM; Electro-chemical machining (ECM), etchant & maskant, process parameters, MRR and surface finish. Laser Beam Machining (LBM), Plasma Arc Machining (PAM) and Electron Beam Machining

UNIT-IV
Introduction to Flexible Manufacturing System, Additive manufacturing: Rapid prototyping and rapid tooling.

Course Syllabus (Practical):

1. To determine moisture content in molding sand,
2. To determine the clay content of molding sand,
3. To perform the Hardness Test to know hardness of molding/core sand.
4. To prepare wood/metal pattern for casting process.
5. To cast a liquid Aluminum metal by using sand molding.
6. Investigate the casting defects and suggest the remedial measures.
7. To make a component involving horizontal and vertical welding using gas welding.
8. To make a component using TIG welding setup.

9. To make a component using MIG welding setup.
10. To prepare a permanent joint on mild steel plate using gas welding.
11. To prepare a permanent joint on thin metallic sheet using spot welding.
12. To find out average grain fineness number using sieve shaker.

COURSE SYLLABUS (Theory):

UNIT - I

Conventional representation of surface finish, Roughness number symbol, Symbols of Machine elements and welded joints.

Limits, Fits and Tolerances: General aspects, Nominal size and basic dimensions, Definitions, Basis of fit or limit system, Systems of specifying tolerances, Designation of holes, Shafts and fits, commonly used holes and shafts.

Fasteners: Drawings of various views of Screw threads, metric and BSW threads, Square thread and multi start threads. Nuts & bolts, Washers, Setscrew, Locknuts and foundation bolts.

UNIT - II

Drawings of various views of:

Shaft joints: Cotter joint and Knuckle joint.

Keys & Shaft coupling: Muff, Flanged, Flexible, Universal and Oldham's coupling.

Shaft bearing: Solid and bush bearing, Plummer block.

Pipe Joint: Flanged joint, Socket and Spigot joint, Hydraulic joint, Union joint, Expansion joint.

Pulley: V-belt pulley.

Gears: Spur gear in mesh with approximate construction of tooth profile, Rack and pinion.

UNIT – III

Assembly and detailed drawings of Engine Parts: Piston, stuffing box, cross head, Vertical & Horizontal engine, Connecting rod, Crank.

Valves: Steam stop valves.

Course Objective: This course introduces the concepts of Partial Differential Equations (PDE), Fourier transform and Z- transform in the context of engineering applications. Mechanical & electrical systems will be modeled and analyzed w.r.t forces and stability. Appropriate numerical methods and simulation tools will also be used.

Course Outcomes:

On successful completion of this course, the students should be able to:

ES1109.1.Solve partial differential equations and boundary value problems through various appropriate techniques.

ES1109.2.Formulate and analyze differential equations especially Navier stokes and energy equations and use numerical methods for solving the same.

ES1109.3.Use Numerical method for solving partial differential equations using finite difference method.

ES1109.4.Compute Fourier transform and inverse Fourier transforms of given functions and use Fourier transform to solve Partial differential equations.

ES1109.5.Find Z-transform and inverse Z-transforms of given functions and use them to analyze control systems.

ES1109.6.Design and analyze various types of filters and attenuators to minimize power losses and improve signal quality.

ES1109.7.Model and simulate electrical networks using open-source simulator/Python package/ Virtual lab

Course Syllabi (Theory):
PDE: Partial Differential Equations of First Order, Variable separable technique for solving PDE. Heat equation, wave equation, Laplace equation
Boundary value problems: Solution of boundary value problems using separation of variables technique. Numerical solution of PDE.
Application of PDE: Momentum and Energy Transport:
The governing equations of fluid dynamics- models of the flow, continuity equation, momentum equation, Energy equation, boundary conditions. Poisouli's flow, Couette flow, steady and unsteady conduction.
Fourier Transforms: Fourier transform and inverse Fourier transform, properties of Fourier transform, Applications in solving Partial differential equations.
Filter Circuits: Types of passive filters, design low-pass, High-pass, Band-pass, Band-reject filters as constant k type, design low-pass, High-pass, Band-pass, Band-reject filters as RC type, Advantages of active filters over passive filters.
Graph Theory: Introduction, Linear graph of a network, Tie-set and cut-set schedule, incidence matrix, cut-set, and tie-set. Graph theory application to a practical radial system.
Z-transform: Introduction, standard z- transform, properties of z – transform, initial and final value theorems, inverse z-transform, applications in control systems.

Textbook:
1. Advanced Engineering Mathematics, Erwin Kreysig, Wiley, India.
2. White F. M., "Fluid Mechanics" Tata McGraw-Hill, New Delhi.
3. Incropera F P "Principles of Heat and Mass Transfer", John Wiley & Sons.
4. Hayt W.H., Kemmerly J. E., Durbin S. M., "Engineering Circuit Analysis", Tata McGraw Hill, 6th edition, 2006.

Course Title and Code: Communication and Identity; CC1104	
Hours per Week	**L-T-P: 2-0-1**
Credits	**2**
Students who can take	B.Tech/BCA/BBA/B.Des Semester- IV

Course Objectives: This course enables students to explore their identities to mark their distinctive presence in professional spaces. It intends to help them gain an understanding of the basic purpose, benefits, and responsibilities of self-presence, and to begin the process of defining their values, strengths, and goals, which helps them enhancing their employability skills through exposing themselves through various activities.

Course Outcomes:

On successful completion of this course, the students should be able to:

CC1104.1. Analyze their personal identities by identifying their personal attributes, values, strengths and vision statement.

CC1104.2. Articulate their personal statement and use it to craft an influential pitch.

CC1104.3. Express themselves professionally on various social media platforms.

CC1104.4. Write a well-structured professional business document.

Course Topics

Module(s)	Topics to be covered
Identifying Self	Discovering Identities: Words That Describe Me, Your Personal Identity, A Portrait of Yourself, Personal Identity Wheel, Self-Awareness from five aspects that influence our identity - Personal Attributes, Value and Principles, Emotional Awareness, Tendencies and Habit, Needs Assessment.
	Personal Branding: Meaning, Importance and how to create and use it; Identify, Build and Market your brand story.
Persuasive Communication	Personal Brand Statement, Resume, Cover Letter and The Elevator Pitch, Presence in Group Discussion and Personal Interviews
	Online Brand Communications- Creating an online presence for professional branding on social media platforms (LinkedIn, Facebook, Instagram, etc)
	Writing a well-structured and effective business documents (Agenda, Minutes of the meetings (MoM) Emails, Executive Summary)

Referred MOOCs –
Course Name- Introduction to Personal Branding
Course duration - approx. 7 hours
Offered by University of Virginia
https://www.coursera.org/learn/personal-branding

Course Name- Digital Footprint (If I Googled you, what would I find?)
Course duration - approx. 9 hours
Offered by The University of Edinburgh
https://www.coursera.org/learn/digital-footprint

Course Name- High Impact Business Writing
Course duration - approx. 7 hours
Offered by University of California, Irvine
https://www.coursera.org/learn/business-writing

Hours per Week	**LTP: 1 0 2**
Credits	**2**
Students who can take	**2ⁿᵈ Year B. Tech**

Course Objective:

To provide understanding of design process using critical thinking for developing a prototype from idea nucleation to a demonstrable product.

Course Outcome:

On successful completion of this course, the students should be able to:

IL1102.1.   Apply the design process for developing a product.

IL1102.2.   Apply techniques to demonstrate the conceptual design.

IL1102.3.   Critically solve-problems through hands-on and activity-based projects.

Course Contents:

Unit 1: Design Process

Introduction to Design Process.

Developing creative thinking and brainstorming from individual level to a team level.

Engineering materials for model making – wire, clay, wood, etc.

Joining and assembly process like Mortise and Tenon, Dowel Joints, etc.

Unit 2: Sketching and Technical Drawing

Hardware and software tools for model making.
Basic drawing and visualization skills including 2D to 3D - Form exploration.
Principles of animation (basic sketching and CAD modeling).

Unit 3: Documentation
Technical aspects of animation and film making (Frame rate, persistence of vision).
Building a Narrative – Start, Middle and End of a story.
Mediums of animation.

Hours per Week	**L T P: 3 0 2**
Credits	**4**
O Students who can take	**B. Tech Semester-V (Batch: 2019-2023)**

Course Objective:

This course aims to impart knowledge on design and analysis of mechanism for the specified type of motion in a machine and transmission systems. This course builds upon the foundations laid in the first year course Calculus and Applied Mechanics to understand advanced courses like Machine Design, Dynamics of Machines, Robotics, Automobile, etc.

Course Outcomes:

On successful completion of this course, the students should be able to:

ME1108.1:   Compare and develop various application based linkages and mechanisms.

ME1108.2:   Analyze velocity and acceleration polygon of different types of mechanisms.

ME1108.3:   Analyze the cam and follower mechanism in order to optimize the power consumption.

ME1108.4:   Prioritize among various mechanisms like belt, rope and chain drive systems in order to minimize energy consumption.

Evaluation scheme for Re-test

Sr. No	Specifications	Marks
1	Theory Exam-III (Re-test)	30
Total (30)		**30**

COURSE SYLLABUS (Theory):

UNIT - I
Classification of mechanisms- Basic kinematic concepts and definitions- Degree of freedom, mobility- Grashof's law, Kinematic inversions of four bar chain and slider crank chains- Limit positions- Mechanical advantage- Transmission angle- Description of some common mechanisms- Quick return mechanism, straight line generators- Universal Joint- Rocker mechanisms   **(8 lectures)**

UNIT - II
Kinematic Analysis of Mechanisms:
Displacement, velocity and acceleration analysis of simple mechanisms, graphical velocity analysis using instantaneous centers, velocity and acceleration analysis using loop closure equations- kinematic analysis of simple mechanisms- slider crank mechanism dynamics Coincident points- Coriolis component of acceleration- introduction to linkage synthesis three position graphical synthesis for motion and path generation.

(12 lectures)

UNIT - III
Cams: Classification of cams and followers- Terminology and definitions- Displacement diagrams-Uniform velocity, parabolic, simple harmonic and cycloidal motions- derivatives of follower motions- specified contour cams- circular and tangent cams- pressure angle and undercutting, sizing of cams, graphical and analytical disc cam profile synthesis for roller and flat face followers.   **(12 lectures)**

UNIT – IV
Belts, Ropes and Chains: Mechanism of belt, rope and chain drive, power transmitting capacity, effect of centrifugal forces, material used for Belts, rope and chain.

(4 lectures)

Vibration: Introduction to vibration, single degree of freedom (free Vibration)

(4 lectures)

COURSE SYLLABUS (Practical):

1. (i) To study the various types of link, and pair mechanism.

    (ii) To study the inversions of four bar mechanism.

2. To determine whirling speed of shaft theoretically and experimentally.

66

3. To determine the position of sleeve against controlling force and speed of a Hartnell governor and to plot the characteristic curve of radius of rotation.

4. To determine the natural frequency of un-damped torsional vibration of a single rotor shaft system.

5. To determine the natural frequency of un-damped torsional vibration of two rotor shaft system.

6. To Analyze the motion of a motorized gyroscope when the couple is applied along its spin axis.

7. To determine the frequency of un-damped free vibration of an equivalent spring mass system.

8. To determine the frequency of damped force vibration of a spring mass system/related case study.

9. To study the static and dynamic balancing using rigid blocks/related case study.

10. To plot follower displacement Vs cam rotation graph for various cam follower arrangement.

Course Code	**ME1109**
Hours per Week	**L T P: 3 0 2**
Credits	**4**
Students who can take	**B. Tech Semester-V (Batch: 2019-2023)**

Course Objective:

The main objective of the course is to impart knowledge of production technology so that students are able to design and perform various forming and machining processes to shape materials for different applications. This course builds upon the foundations laid in the second year course Materials Engineering and Production Technology-I to understand the application of manufactured components, for manufacturing of Automobiles, Robots, Airplanes, etc.

Course Outcomes:

On successful completion of this course, the students will be able to:

ME1201.1: Design load capacity of forming equipment to perform various bulk forming and sheet forming operations.

ME1201.2: Design of machining tools, forming tools and holding tools for various forming and machining processes.

ME1201.3: Calculate force required for machining metallic materials using appropriate cutting tool materials and cutting fluids.

ME1201.4: Use cutting, milling, and finishing operations to shape materials and evaluate their surface finish using conventional and automatic machines.

Prerequisites	Materials Engineering, PT-I

Sr. No	**Specifications**	**Marks**
1	Theory Exam-III	30
Total (30)		**30**

Course Contents:

UNIT - I
Introduction to bulk and sheet metal forming, plastic deformation and yield criteria; fundamentals of hot and cold working processes; load estimation for bulk forming (forging, rolling, extrusion, drawing) and sheet forming (shearing, deep drawing, bending), principles of powder metallurgy. **(8)**

UNIT - II
Tooling for conventional and non-conventional machining processes: Mold and die design, Press tools, Cutting tools; **(6)**
Holding tools: Jigs and fixtures, principles, applications and design; press tools – configuration, design of die and punch; principles of forging die design. **(6)**

UNIT - III
Metal cutting: Single and multi-point cutting; Orthogonal cutting, various force components: Chip formation, Tool wear and tool life, cutting tool materials, Cutting fluids. **(10)**

UNIT - IV
Turning, Drilling, Milling and finishing processes, Surface finish and integrity, Coating. **(8)**
Introduction to CNC machining. **(2)**

Course Syllabus (Practical)

1. Study of single point cutting tool geometry & grind the tool as per given tool geometry / related case study.
2. To prepare a job using lathe machine / related case study.
3. To prepare a gear using Milling Machine / related case study.
4. Study the milling machine, milling cutters, indexing heads and indexing methods / related case study.
5. Prepare a hexagonal / octagonal nut using indexing head on milling machine / related case study.
6. To cut external metric threads & to meet it with the nut / related case study.
7. To prepare the job by eccentric turning on lathe machine / related case study.
8. To prepare a job on shaper from given MS rod / related case study.
9. To prepare a job on surface grinder and measure the various parameters of the finished piece / related case study.
10. Disassembly and assembly of small assemblies such as three jaw chuck, four jaw chuck, tail stock, bench vice, screw jack etc. / related case study.

Course Title and Code:	Understanding and Managing Conflict|CC1105	
Hours per Week	**L-T-P: 2-0-0**	
Credits	**2**	
Students who can take	B.Tech - Sem V	

Course Objective-

In today's increasingly complex and fragmented world, it is important to be able to resolve conflicts and build healthy relationships. Understanding and Managing Conflict is a course designed to prepare students to identify conflicts, manage emotions, analyze the situation and characters, and practice different frameworks to deal with conflicts.

Course Outcome:

On successful completion of this course, the students should be able to:

CC1105.1: Define a group and explain the stages of group development.

CC1105.2: Describe conflict and explain types and causes of conflict.

CC1105.3: Use inquiry and advocacy to engage with groups.

CC1105.4: Give and receive feedback effectively.

CC1105.5: Identify sources of conflict and manage them using difference conflict
handling styles.

Course Title and Code:	Introduction to IoT; EE1111
Hours per Week	**L-T-P: 1-0-2**
Credits	**2**
Students who can take	B. Tech Sem V All Branches

Course Objective- The course aims to develop understanding of Internet of Things concepts and also develop skills for working on IoT development boards to interface sensors and actuators. The course will enable the students to upload data from sensors on a web server and to use this data for analytical purposes or to actuate some transducers.

Course Outcome:
On successful completion of this course, the students should be able to:

EE1111.1. Interface the Analog and Digital sensors to Node-MCU
EE1111.2. Develop Embedded C programs to read sensor data and upload to public cloud platform.
EE1111.3. Use Python-based IDE (integrated development environments) for the interfacing of I/O devices with Raspberry Pi.
EE1111.4. Implement communication protocols for interfacing sensors to microcontrollers.
EE1111.5. Visualize sensor data uploaded on public cloud.
EE1111.6. Apply standard protocol(s) for implementation of IoT Systems.
EE1111.7. Analyze and Improve existing systems with innovative IoT based approaches.

UNIT 1: Introduction to IoT Fundamentals: Definition, Characteristics, Applications, Connectivity Layers, Addressing, Networking.

UNIT 2**:** Sensors and Actuators: Sensors and Transducers, Sensor Classes, Sensor Types, Actuator Basics, Actuator Types,

UNIT 3**:** Basics of IoT Networking & Protocol: IoT Components, Inter-dependencies, SoA, Wireless Networks, Protocol Classification, MQTT, Secure MQTT, CoAP, XMPP, AMQP (Advanced Message Queuing Protocol)

UNIT 4**:** Connectivity Technologies: IEEE 802.15.4, ZigBee, 6LoWPAN, RFID, HART, NFC, Bluetooth, Zwave.

UNIT 5**:** Introduction to NodeMCU and Server: Basic Concepts of Arduino Platform, Examples of Arduino Programming, Interfacing different sensors with NodeMCU. Introduction to Blynk App, Uploading and downloading data from server using Blynk App. Introduction to ThingSpeak Server, Uploading and downloading data from ThingSpeak server.

UNIT-6 Raspberry Pi: Basic functionality of the Raspberry Pi B+ board, Setup and Configuring Raspberry Pi, programming on the Raspberry Pi using Python, Python functions to access the Raspberry Pins, how Raspberry Pi interact with online services through the use of public APIs and SDKs.

Course Title and Code:	**PR1101 Automation Project**	
Credits	2	
Students who can take	B.Tech. (All programs)	

Course Objectives: This course aims to develop skills for designing, implementing and testing solutions for automation using IoT.

Learning Outcomes:

On successful completion of this course, the students should be able to:

PR1101.1 design and implement a complete project in IoT/Automation using microcontroller/SOC interfaced with sensors or any other automation hardware/tools,

PR1101.2 apply standard IoT protocol(s),

PR1101.3 use cloud servers for data streaming and analysis,

PR1101.4 implement algorithms using the data at edge/cloud,

PR1101.5 deploy techniques to conserve bandwidth/energy/other resources and achieve cost economy for project.

Course Title and Code: Practice School – I (PS-I), PS1101	
Total Duration	45 Days
Credits	**04**
Students who can take	B.Tech Semester-V

Course Objective:

The purpose of Practice School-I is to give an opportunity to re-understand their theoretical knowledge in the context of real-life situations.

After course completion, the student will be able to:

    PS1101.1 Identify skills and capabilities that interconnect effectively with the needs of industry.

    PS1101.2 Demonstrate problem solving skills in the context of some real-life situation.

    PS1101.3 Reflect and evaluate on future employment opportunities.

Course Title and Code:	Idea to Business Model; ED1102
Hours per Week	L-T-P: 3-0-0
Credits	4
Students who can take	B. Tech Sem V

Course Objective- To encourage students to nurture their entrepreneurial traits and think creatively to develop innovative ideas/products for commercial exploitation.

Course Outcome:

On successful completion of this course, the students should be able to:

ED1102.1. Identify problem worth solving through design thinking.

ED1102.2. Identify customer segment and niche for specific markets.

ED1102.3. Craft Value Preposition Canvas.

ED1102.4. Create business model using Lean Canvas Template

ED1102.5. Build 'A' team for new start-ups.

ED1102.6. Design and validate solution demo and MVP.

ED1102.7. Analyse cost, revenue, key channels and pricing model for the venture.

ED1102.8. Craft positioning statement of a new venture.

ED1102.9. Classify the different sources of funding.

Course Title and Code:	Urban and Regional Planning CE1215	
Hours per Week	L-T-P: 3-1-0	
Credits	4	
Students who can take	B. Tech (V Sem) OE	

Course Objective- To introduce the issues, concept and frameworks for urban and regional development and planning.

Course Outcome:

On successful completion of this course, the students should be able to:

CE1215.1 Demonstrate a broad concept in urban and regional planning, including deep understanding of underlying principles and concepts.

CE1215.2 Address land-use and built-environment problems in a range of social, economic and environmental contexts.

CE1215.3 Analyze the various components of water supply, sanitation, transportation and waste management.

CE1215.4 Analyze the various types of plans and their execution.

CE1215.5 Plan and design various types of social infrastructure projects.

Syllabus (Theory):

Introduction to Planning: Defining planning as a discipline, multidisciplinary nature, role of a planner, fields of planning, Urban, regional, environmental, transport and infrastructure, Concepts of garden City, City beautiful, linear city, Various definitions of town and country planning; Goals and objectives of planning; Components of planning; Benefits of planning; Arguments for and against planning. Economics and social planning as bases of physical planning. Planning Process. Levels of planning in India.

Types of Plans: Definition of development plan; Types of development plans: Master plan, City development plan, Structure plan, District plan, Action area plan, Subject plan, Comprehensive planning, Zonal plans, special area development plan e.g., SEZ (special economic zones), SIR (special investment regions).

Water Supply System: Water supply systems and networks, water sources, quality and quantity requirements, collection and water requirement for various land uses; Factors affecting water demand; Storage facilities; Distribution Systems; rainwater harvesting system.

Sanitation, Sewer system and SWM: Sanitation and Sewer System, types of sewers: General considerations, Sewage Disposal and treatment, Low-cost appropriate technologies for sanitation, Elements of Solid Waste Management, Best practices for solid waste management.

Transport System Types and characteristics of transport systems; Principles of transport infrastructure planning and, pedestrian and cyclist infrastructure; parking facilities; principles of traffic management, urban mass transport systems

Regional planning: definition, need and importance, function, objective, concept of region, types of regions, types and contents of regional planning for block, district, state, national, NCR, resource region, agro–climatic region, topographic region and sectoral planning, major regional problems and their solutions.

Course Title and Code:	Introduction to User-Experience; IL1204	
Hours per Week	2-2-0:	
Credits	4	
Students who can take	B.Tech Sem III/V (All Branches)	

Course Objective- The course takes a student through the complete User-Experience (UX) life-cycle including problem-identification, problem-framing, design exploration and design-evaluation.

Course Outcome:

On successful completion of this course, a student should be able to:

IL1204.1.   Appreciate UX holistically with respect to different types of user-needs.
IL1204.2.   Conduct User-Studies.
IL1204.3.   Synthesize a Problem-Statement.
IL1204.4.   Conduct Creative Design-Exploration.
IL1204.5.   Conduct Systematic Design Evaluation.

Course Title and Course Code	**Computer Integrated Manufacturing (ME1212)**
Hours per Week	**L T P: 3 0 2**
Credits	**4**
Students who can take	**B. Tech Semester- V (Batch: 2019-2023)**

Course Objective:
To understand the application of computers in the advanced manufacturing industries. This course compliments Production Technology-II to build upon the foundations laid in the earlier courses Design and Prototyping, CAD Lab, as well as Production Technology–I.

Course Outcomes:
On successful completion of this course, the students should be able to:

ME1212.1: Implement concept of CAD/CAM in industry.
ME1212.2: Apply cost reduction technique for manufacturing processes.
ME1212.3: Design cellular manufacturing system
ME1212.4: Identify requirement and application of AGVs and robots for FMS

COURSE SYLLABUS (Theory):

UNIT I:

Brief introduction to CAD and CAM – Manufacturing Planning, Manufacturing control-Introduction to CAD/CAM – Concurrent Engineering-CIM concepts – Computerized elements of CIM system –Types of production. Basic Elements of an Automated system – Levels of Automation – Lean Production and Just-In-Time Production.

UNIT II

Process planning – Computer Aided Process Planning – Logical steps in Computer Aided Process Planning – Aggregate Production Planning – Material Requirement planning – Capacity Planning- Control Systems-Shop Floor Control-Inventory Control.

UNIT III

Group Technology(GT), Part Families – Parts Classification and coding – Part Coding system – Production flow Analysis – Cellular Manufacturing –Composite part concept – Machine cell design and layout.

UNIT IV

Types of Flexibility - FMS – FMS Components – FMS Application & Benefits, Automated Guided Vehicle System (AGVS) – AGVS Application, Robot Anatomy and Related Attributes – Classification of Robots- Robot Control systems.

Course Syllabus (Practical):
1. To manufacture any 3D designed CAD model using 3D printer.
2. To manufacture any part using CNC Machine.
3. To study a computer integrated manufacturing system (a case study).
4. To study a flexible manufacturing system (a case study)

Hours per Week	**L-T-P: 3-0-2**
Credits	**4**
Students who can take	**B. Tech Semester-VI**

Course Objective: This course aims to equip students with the concepts, procedure, and standards for designing and evaluating shafts, bearings, springs, and gears for different applications.

Course Outcomes:

After course completion, the student will be able to:

ME1110.1: Design and evaluate shafts to work under different service loading conditions as per ASTM/BIS standards.

ME1110.2: Design bearings for various applications as per ASTM/BIS standards.

ME1110.3: Design, evaluate gears for various applications as per ASTM/BIS standards.

ME1110.4: Design springs for various systems as per ASTM/BIS standards.

Re-Test		
1	Theory Exam-III	30

Syllabus (Theory)
UNIT-I
Design for Fluctuating Loads- Theory of failures, cyclic stress, fatigue and endurance limit, stress concentration factor, notch sensitivity, design for finite and infinite Life, Soderberg, Goodman & Gerber criteria.

Shafts- Material for shaft, stresses in shaft, design of shaft subjected to twisting moment, bending moment and combing twisting and bending moments, shaft subjected to fatigue load.

UNIT-II
Bearing- Classification of bearing, hydrodynamic lubrication, sliding contact bearing, design of journal bearing, thrust bearing-pivot and collar bearing, hydrodynamic thrust bearing.

Rolling contact bearing, types of rolling contact bearing, Bearing life, Selection of ball and roller bearings with ABMA Standards.

UNIT-III
Spur Gears- classification of gear, tooth forms, system of gear teeth, design consideration, Beam strength of gear tooth, dynamic tooth load, wear strength of gear tooth, failure of gear tooth, design of spur gears, AGMA standards.

Helical Gears: Terminology, forces components on a tooth of helical gear, virtual number of teeth, beam strength & wear strength of helical gears, dynamic load on helical gears.

UNIT-IV
Springs- Types of springs, design for helical springs against tension, compression and fluctuating loads, Design of leaf springs, Surging phenomenon in springs.

Syllabus (Lab)

1. Design an Oldham coupling and develop a 3D model.
2. Design a roller bearing and develop a 3D model.
3. Design a sliding contact bearing and develop a 3D model.
4. Design a spur gear and develop a 3D model.
5. Design a helical gear and develop a 3D model.
6. Design of spring under given condition and develop a 3D model.

Course Title and Course Code	**Automobile Engineering (ME1111)**
Hours per Week	**L T P: 3 0 2**
Credits	**4**
Students who can take	**B. Tech Semester-VI**

Course Objective:

The main objective of the course is:-

1. To make the student conversant with fundamentals of automotive systems
2. To develop competencies in performance analysis of vehicles

Course Outcomes:

On successful completion of this course, the students should be able to:

ME1111.1   Identify different part of the automobile.

ME1111.2   Design and explain the working of various parts like engine, transmission, clutch and brakes.

ME1111.3   Design a steering and suspension system.

ME1111.4   Identify Euro6 standards for automobile emissions.

UNIT-I   (10 Hours)

Introduction: Layout of automobile – introduction chassis and body components. Types of Automobile engines. – Power unit – Introduction to engine lubrication – engine servicing

Fuel System: S.I. Engine: Fuel supply systems, Mechanical and electrical fuel pump – filters – carburetor – types – air filters – petrol injection. Introduction to MPFI and GDI Systems.

C.I. Engines: Requirements of diesel injection systems, types of injection systems, DI Systems IDI systems. Fuel pump, nozzle, spray formation, injection timing, testing of fuel pumps. Introduction CRDI and TDI Systems.

Unit II   (10 Hours)

Cooling System: Cooling Requirements, Air Cooling, Liquid Cooling, Thermo, water and Forced Circulation System – Radiators – Types – Cooling Fan - water pump, thermostat, evaporative cooling – pressure sealed cooling – antifreeze solutions.

Ignition System: Function of an ignition system, battery ignition system, constructional features of storage, battery, auto transformer, contact breaker points, condenser and spark plug – Magneto coil ignition system, electronic ignition system using contact breaker, electronic ignition using contact triggers – spark advance and retard mechanism.

Electrical System: Charging circuit, generator, current – voltage regulator – starting system, bendix drive mechanism solenoid switch, lighting systems, Horn, wiper, fuel gauge – oil pressure gauge, engine temperature indicator etc.

UNIT-III   (10 Hours)

Transmission System: Manual transmission and types of gear box, sliding-mesh, constant-mesh and synchromesh gear boxes, types of dog clutches, gear shift mechanism, principles of automatic transmission. Clutch operation and types, multi-plate and cone clutches, clutch construction and lining. Propeller shafts, universal joints, slip joint, Hotch-Kiss drive and torque tube drive, transaxle and transfer case, radius rods, four wheel drive arrangement. Automobile emissions, their harmful effects, pollution control measures, catalytic converters, exhaust system layout, mufflers, and resonators. Engine parameters, brief discussion of testing devices, engine service, engine tuning, engine re-boring, cyaniding, nitriding, de-carbonization.

UNIT-IV   (10 Hours)

Braking System: Braking systems, layouts for mechanical braking, hydraulic braking, pneumatic braking, master cylinder, wheel cylinder, tandem cylinder, shoe brakes, disc brakes, requirements of brake fluid, power brakes, concept of ABS and traction control, parking brakes. Steering system, principles and need of steering, components parts, steering gear, steering ratio, steering lock, turning radius, centre point. Steering, wheel geometry, power steering principle and typical schemes.

Suspension System: Suspension system, functions of suspension, component parts, coil springs, leaf springs, air springs, shock absorbers, torsion bars, stabilizer bars, typical combinations of components in suspension systems, MacPherson strut suspension, its merits.

Wheel and tyres, wheel assembly and parts, pressed wheels and cast wheels, wheel rim, tyres, aspect ratio, tyres with tubes and tubeless tyres, advantages, construction of a tyre, plies, radial plies, tyre treads and tyre specifications.

Course Title and Code: Critical Thinking for Decisions at Workplace CC1106
Credits: 2 , LTP : 2 0 0

Course Objective: In today's world, the idea of right and wrong is being challenged by businesses, use of technology, economic conditions, and norms of societies. The relevance of a well-reasoned decision is crucial. This course intends to make students take better decisions keeping in mind purpose, context, and ethics.

 Course Outcomes

The students will be able to:

CC1106.1 Apply strategies of Critical Thinking to examine organisational problems through positive inquiry

CC1106.2 Describe and examine suitable problem-solving and ethical decision-making processes

CC1106.3 Choose the simplest and logical decision among multiple alternatives

CC1106.4 Evaluate solutions and count on possible risks based on purpose, context and ethics

SYLLABUS

	Topic	**Sub-topics**
1	Decision Making: Definition and Type	• Organisational decision-making • Concept of thinking triangle

#	Topic	Contents
		• Importance of decision-making at work place
2	Barriers to Sound Reasoning	• Identifying barriers to Critical Thinking • Biases, prejudices, facts, opinions, assumptions. • Overcoming the obstacles
3	Steps of Decision Making	• Factors impacting decision-making • Concept of enquiry circle • Understanding arguments in business parlance
4	Ethics and Decisions	• Theories of ethics (Teleological, Deontological, Virtue Ethics, Conduct Ethics, Rights based, Utilitarianism, Hedonism, Egoism) • Concept of Moral reasoning • Role of ethics and values in Decision Making
5	Importance of purpose and context	• Role of Stakeholders in decision making.
6	Problem analysis best practices	• Root cause analysis • Identifying questions at the heart of a problem • Thinking checklist
7	Decision Implementation Techniques	• Developing intellectual virtues • Paul Elder's model (Intellectual humility, courage, empathy, integrity and confidence.
8	Comparing alternative solutions	• Ladder of Inference • Meta-thinking • Perspectives

Course Title and Code:	Robotic Process Automation Lab, CS1125
Hours per Week	L-T-P: 0-0-4
Credits	2
Students who can take	

Course Objective- The course aim is to develop understanding about Intelligent Automation through Robotic Process Automation for automating business processes using software robots with cost efficient digital delivery.

Course Outcome:

On successful completion of this course, the students should be able to:

CS1125.1 Use and understand the various functionalities and features of UiPath Studio and Orchestrator.

CS1125.2 Design, implement, and use RPA activities.

CS1125.3 Develop basic robots using UiPath Community Edition.

CS1125.4 Explore various data extraction techniques.

CS1125.5 Identify processes which can be automated.

CS1125.6 Apply best practices in RPA projects.

Retest

1	Quiz	20
2	Lab Evaluation-I (Test)	20

Syllabus (Theory):

Unit I: Programming Basic & Recap: Programming concept basic; **Introduction to RPA:** scopes and techniques of automation, RPA components and various RPA platforms, Introduction to UiPath as RPA platform, Applications and Benefits of RPA, Introduction to UiPath Studio, UiPath robot, types of robots, and UiPath Orchestrator. Brief on Studio interface and components.

Unit II: **RPA Projects:** Types of Projects in RPA: Sequence, Flowcharts, and State machines; Variables, Arguments, Data Types and Control flow: flow chart activities and sequences activities. **Data Manipulation:** Text and Data Manipulation, Data tables, clipboard management, file operation, importing from and exporting to CSV/Excel file and data table.

Unit III: **Control of Controls:** Attach window activity, Finding the control, Waiting for a control, Act on Control- mouse and keyboard activity. Handling event driven controls as working with UiExplorer handling events. Introduction to Recorder, OCR, types of OCR and Screen Scrapping Using OCR. **Selectors:** Selectors, Defining and Assessing Selectors, Customization, Debugging, Dynamic Selectors, Partial Selectors, RPA Challenge.

Unit IV: **Application with Plugins and Extensions:** Java plugins, Citrix automation, Mail plugins, PDF plugins, Web integration, excel and word plugins. Extensions- Java, chrome, firefox, and Silverlight. **UiPath Advanced Automation concepts and techniques:** Image, Text and introduction of Citrix Automation; **Excel Data Tables & PDF:** Data Tables in RPA, Excel and Data Table basics, Data Manipulation in excel, Extracting Data from PDF, Extracting a single piece of data, Anchors. **Email Automation:** Incoming Email automation, Sending Email automation.

Unit V: **Debugging and Exception Handling:** Common exceptions and ways to tackle them, Strategies for solving issues, Catching errors **Capstone Project.**

LAB

1. Setup, configuration, and introduction of components of UiPath Studio.
2. Execution of prebuilt examples of sequence, flow chart and state machines projects.

Create a sequence/Flow chart activity defining various types of variable as:

3. Generic Value Variables, Text Variables, Boolean Variables, Number Variables,
4. Array Variables, Date and Time Variables, Data Table Variables

Managing Arguments:

5. Create two activities, one activity defined with arguments and second activity which manages the argument to receive value from first activity.
6. Create an activity to manage importing active namespaces.

Create a project to Manage the control Flow:

7. The Assign Activity, The Delay Activity, The Do While Activity, The If Activity
8. The Switch Activity, The While Activity, The For-Each Activity, The Break Activity.

The Recording toolbar Activity:

9. Exercises using basic, web, and Desktop recoding.
10. Automate manual recording projects on Left-click on buttons, check boxes, drop-down lists, GUI elements, and Text typing

Data Scrapping:

11. Bot to extract structured data from your browser, application or document to a database, .csv file or even Excel spreadsheet.
12. Image and Text Automation
13. Excel Data Tables & PDF
14. Email Automation
15. Deployment of plugins and extensions.
16. Deploying and maintaining the BOT.

Course Title and Code: Geographical Information Systems Lab (GIS): CE1114	
Hours per Week	**L-T-P: 1 0 2**
Credits	**2**
Students who can take	B. Tech Sem VI sem (B Tech CSE, EEE and ME)

Course Objective: This course aims to develop understanding of various methods of remote sensing, satellite images data acquisition, data format, data analyze and data output. It also explains the major applications of GIS i.e. climate change, natural resources management and water resources management.

Course Outcomes:
On completion of the course, the student should be able to:
CE1114.1 Asses the various sources for remote sensing data.
CE1114.2 Analyze the data from various type of images.
CE1114.3 Analyze the data acquisition and data output through GIS.
CE1114.4 Incorporate GIS in resources management and climate changes.

Hours per Week	**L T P: 3 0 2**
Credits	**4**
Students who can take	**B. Tech Semester-VI (Batch: 2019-2023) as DE**

Course Objective:
The main objective of the course is to impart knowledge of other technologies that can be adopted to support manufacturing of any product in order to improve on productivity and usefulness of product.

Course Outcomes:
On successful completion of this course, the students will be able to:

ME1214.1.	Identify joining processes like brazing, soldering, adhesive bonding, and mechanical fastening for various application.
ME1214.2.	Identify surface roughness and lubricants that effects product quality.
ME1214.3.	Design surface quality of product to improve performance.
ME1214.4.	Design various inspection processes.

Prerequisites	**Basics of Materials Engg, PT-I and PT-II**

Course Syllabus:

UNIT–I
Other Joining Processes: Introduction, Brazing, Soldering, Adhesive Bonding, Mechanical Fastening, Joining of Plastics, Ceramics and Glasses.

UNIT–II
Surface roughness and measurement: Introduction, Surface structure and integrity, Surface texture and roughness, friction, wear, lubrication, metal working fluids and their selection

UNIT–III
Surface treatments: Introduction, Mechanical surface treatments, mechanical plating and cladding, case hardening and hard facing, thermal spraying, vapor deposition, electroplating and hot dipping, cleaning of surfaces.

UNIT–IV
Quality Assurance and Inspection: Introduction, Product Quality, Quality Assurance, Total Quality Management, Taguchi Methods, Statistical Methods for Quality Control, Statistical Process Control, Reliability of products and processes.

Course Syllabus (Practical):

1. To prepare specimen surface using grinding machine and analyze its surface roughness / related case study.
2. To prepare specimen surface using CNC turning machine and analyze its surface roughness / related case study.
3. To analyze the effect of surface roughness on the tensile strength / related case study.
4. To analyze the effect of surface roughness on the toughness / related case study.
5. To analyze the effect of surface roughness on the fatigue strength / related case study.

Students who can take	**B. Tech Semester-VI**

Course Objective:

This course aims to expose the students with various aspects of Industrial Design & Manufacturing, so as to design new products considering aesthetics, manufacturing cost, environment and other human factors.

Course Outcomes:

On successful completion of this course, the students should be able to:

ME1210.1: Identify and select product cycle for any component or assembly.
ME1210.2: Develop 3D model of the parts as per the dimensional values.
ME1210.3: Creating tool path and machining product using 3-axis CNC Lathe.
ME1210.4: Creating tool path and machining product using multi-axis CNC milling machine.

COURSE SYLLABUS (Theory):

UNIT – I
Introduction to CIM**,** Product cycle- Design process- sequential and concurrent engineering, co-ordinate systems, homogeneous coordinates, 2D and 3D transformations.

(9 lectures)

UNIT - II
Curves and Surfaces: Analytical, Synthetic curves with advantages, Disadvantages, Comparison with parametric curves, Geometric modeling curves and surfaces.
Wire frame models, Parametric representations, Parametric curves and surfaces
Solid modeling: Solid models, Fundamentals of solid modeling, Different solid representation schemes, Half -spaces, Boundary representation (B-rep), Constructive solid geometry (CSG), Sweep representation, Analytic solid modeling, Perspective.

(9 lectures)

UNIT - III
3-Axis machining and creating tool path for CNC Lathe: explore tool path for CNC lathe, choose lathe specific tool, Identify the lathe coordinate system, create turning tool path for different turning operations.

(12 lectures)

UNIT – IV
Multi –Axis tool path for CNC Milling Machines: Recognize multi-axis geometry, practice the application of multi-axis tool path, identify 2+3 axis simultaneous machining.

(12 lectures)

COURSE SYLLABUS (Practical):

11. Critical analysis of Industrial drawing.
12. Creating the CAD model of intricate parts.
13. Generate the drafting sheet of CAD models.
14. Application of Geometric tolerance and Dimensioning.
15. Generating the CNC tool path for CNC lathe.
16. Generating the CNC tool path for 3-Axis CNC milling.
17. Generating the CNC tool path for Multi-Axis CNC milling.

Books:
4. Mastering CAD/CAM, Ibrahim Zeid, McGraw Hill Education; 2nd edition (7 August 2006).

Course Title and Course Code	**Refrigeration and Air Conditioning (ME1205)**
Hours per Week	**L T P: 3 0 2**
Credits	**4**
Students who can take	**B. Tech (Semester-VI)**

Course Objective:
The main objective of the course is to give good exposure in the area of refrigeration processes so that students can model, analyze and design different refrigeration and air conditioning systems for various applications.

Learning Outcomes:
On successful completion of this course, the students should be able to:

ME1101.5: Design refrigeration cycles for various applications
ME1101.6: Design application based vapor compression refrigeration systems.
ME1101.7: Design application based vapor absorption refrigeration systems.
ME1101.8: Design various refrigeration and air conditioning equipment as per ASHRAE standards for various HVAC systems.

	Total(30)	30

COURSE SYLLABUS (Theory):

UNIT-I (10 Lectures)
Introduction: Concept of heat Engine, heat pump and refrigeration, efficiency and COP, Ideal refrigeration cycle– Reverse Carnot cycle, Unit of refrigeration, refrigeration effect, different types of refrigeration systems. Air refrigeration system, air refrigerator, Bell Coleman cycle, Reverse Brayton cycle–ideal and actual cycle's analysis. Air cycles for aircraft – simple system, Bootstrap system. Regenerative system, Reduced Ambient system, concept of dry air rated temperature.

UNIT-II (10 Lectures)
Simple saturated vapor compression refrigeration system, limitation of reversed Carnot cycle with vapor as a refrigerant, pressure- volume, temperature–entropy diagram, pressure–enthalpy diagram, Actual vapor compression cycle and deviation from ideal conditions and their effects on cycle performance, use of tables and charts for solving problems, production of low temperature - compound vapor compression and cascade systems.

UNIT- III (10 Lectures)
Vapor absorption refrigeration systems, principles, different refrigerants–absorbent combination, ideal and actual systems, ideal COP of absorption refrigeration systems, solar refrigeration. Refrigerants types, designation of refrigerants, their properties, desirable properties of an ideal refrigerants, selection of refrigerants, impact of refrigerants on global warming and ozone depletion, global warming potential and ozone depletion potential, environmentally friendly refrigerants, secondary refrigerants and its applications.

UNIT- IV (10 Lectures)
Refrigeration and Air Conditioning Equipment's: Types of compressors, condensers, expansion devices, evaporators; Cooling and Dehumidifying coils, Temperature sensors, Filters, Pressure sensors, Humidity sensors, Actuators, Safety controls; Accessories.

Hours per Week	**L-T-P: 3-1-0**
Credits	**4**
Students who can take	B.Tech SemVI sem (2019-2023) (OE)

Course Objective: This course aims to develop understanding of various natural and manmade disasters. Natural disasters include earthquake, Tsunami, Flood, forest fires and Land Slides. Manmade disasters include fire, Industrial Pollution, embankment failure, structural failure and due to electric supply. Topics includes the causes for these disasters and remedial measures which can minimize the losses to the life and property. The course also includes the identification and description of electric supply resilience and restoration.

Course Outcomes

On completion of the course, the student should be able to:

CE1206.1 Asses the types of disasters, causes and their impacts.
CE1206.2 Assess vulnerability and various methods of risk reduction measures and mitigation.
CE1206.3 Draw the hazard and vulnerability profile of a given region.
CE1206.4 Analyze the impact of Storms and Severe Weather on electric utility.
CE1206.5 Plan and execute framework to black start and restoration procedure with considering security criteria and power system reliability.

Syllabus (Theory)
Unit-1 Introduction to Disasters, Various types of disaster, Natural: Flood, Earthquake, cyclone, Land slide, Manmade: Fire, Industrial Pollution, embankment failure, structural failure, Loss of resources.

Unit-2
Risk and Vulnerability:
Risk: Its concept and analysis, Risk reduction, Vulnerability: Its concept and analysis, strategic development for vulnerability reduction

Unit 3
Disaster Management in Electrical Systems:
Causes of Extended Outages, System Impact of the Loss of Major Components, Methods to Reduce Energy System Vulnerability, Development of an On-Site and Off-site Disaster management Plan, Accident prevention techniques and Reporting procedures, Investigation reports, Impacts of Blackouts.

Unit 4
Management- Objectives, Processes, Events, analysis, base-line data, forecasting and Warnings. Disaster preparedness plan concept and nature, Emergency operation center and IT aids- physical environment, Applications. Public-private agency co-ordination- federal, state and local disaster response organization and network, Citizen and community role in disaster response and recovery.

Case Studies

1. A Case study on flood Hazard
2. A case study on Tsunami Hazard
3. A case study on Earthquake
4. A case study on Forest fire
5. A case study on structural failure
6. A case study on Electrical Disaster Recovery Operations for a Hospital
7. A Case study of Impacts of Cyclones on the Power Sector in India.
8. Impact assessment of Storms and Severe Weather on electric utility infrastructure.

Course Title and Code:	Minor Project; PR1103
Hours per Week	**L-T-P: 0-0-2**
Credits	**4**
Students who can take	B.Tech Sem VII

Course Objective- This course offers an opportunity to apply and extend knowledge learned throughout the program to solve real world issues. The minor projects undertaken span a diverse range of topics, including design, simulation, and experimental studies. The course emphasizes, facilitating student learning in technical, project implementation and presentation spheres.

Course Outcome:

On successful completion of this course, the students should be able to:

PR1103.1:	Identify and formulate industrial and societal problems.	
PR1103.2:	Design engineering solutions for complex problems.	
PR1103.3:	Develop/fabricate, and implement solutions for identified problem.	
PR1103.4:	Demonstrate the knowledge, skills and attitudes of a professional engineer.	

Operation Procedure:

Students are expected to achieve the objective of the project work. The students are expected to submit a synopsis at the beginning of the semester for approval from the departmental committee in a specified format. The students are expected to report to their mentor(s) frequently and will be evaluated continuously. Department committee will evaluate the work through seminars and progress reports as per the evaluation scheme. At the end there would be a demonstration of the solution and possible future work for the work done.

- Student must devote full semester for Minor Project.
- Student must report to the mentor(s) regularly.
- Seminar evaluation must be carried out in the presence of at least two-committee members.
- Experts in the relevant area constituted by the supervisor.
- Final Seminar Report to be submitted must be in formal hard bound cover bearing of the Institute emblem.
- Assessment is by means of a synopsis presentation, submission of a thesis, and a public demonstration of work undertaken.

Course Title and Course Code	**IC Engine (ME1201)**
Hours per Week	**L T P: 3 0 2**
Credits	**4**
Students who can take	**B. Tech Semester-VII**

Course Objective:
This course builds upon the foundations laid in the second year course of Thermodynamics to understand advanced courses like Automobile, I.C Engines, etc. The main objective of the course is to give the students an introduction to reciprocating internal combustion engines. It also aims to develop competencies among students for analyzing the performance parameters of the engines.

Course Outcomes:
On successful completion of this course, the students should be able to:

ME1201.1: Design different types of reciprocating internal combustion engines (ICE), their typical design features and performance characteristics.

ME1201.2: Analyze power cycle efficiencies of internal combustion engines for ideal gas cycles, and air-fuel cycles.

ME1201.3: Design various components of exhaust emissions and demonstrate the mechanisms of emission formation.

ME1201.4: Analyze exhaust emission systems for fuel quality and engine performance.

COURSE SYLLABUS (Theory):

UNIT - I

Air standard cycles: Internal and external combustion engines; classification of I.C. Engines, Cycles of operation in four stroke and two stroke I.C. Engines, Assumptions made in air standard cycle; Otto cycle; diesel cycle, dual combustion cycle, comparison of Otto, diesel and dual combustion cycles; sterling and Ericsson cycles; air standard efficiency, specific work output, specific weight; work ratio; mean effective pressure; deviation of actual engine cycle from ideal cycle. Problems.
(10)

UNIT - II

Carburetion, fuel Injection and Ignition systems: Mixture requirements for various operating conditions in S.I. Engines; elementary carburetor, Requirements of a diesel injection system; types of injection systems; petrol injection, Requirements of ignition system; types of ignition systems, ignition timing; spark plug. **(4)**

Combustion in S. I. Engines: Ignition limits, Stages of combustion in SI engine, effect of engine variables on ignition lag, effect of engine variables on flame propagation, rate of pressure rise, abnormal combustion, detonation or knocking, effects of detonation. **(4)**

Combustion in C. I. Engines: Stages of combustion, air-fuel ratio in CI engines, delay period or ignition lag, variables affecting delay period, diesel knock, and methods of controlling diesel knock. **(2)**

UNIT - III

Lubrication and Cooling Systems: Lubrication principles, hydrodynamic lubrication, Functions of the lubricating system, Properties of the lubricating oil, SAE rating of lubricating oils, Service rating of oils, Types of lubrication systems; mist, wet sump and dry sump lubrication systems; engine performance and lubrication, Necessity of engine cooling; disadvantages of overcooling; cooling systems; air-cooling, water cooling; radiators. **(6)**

UNIT – 1V

Engine Testing and Performance: Performance parameters: BHP, IHP, mechanical efficiency, brake mean effective pressure and indicative mean effective pressure, torque, volumetric efficiency; specific fuel consumption (BSFC, ISFC), thermal efficiency; heat balance; Basic engine measurements; speed, fuel and air consumption, brake power, indicated power and friction power, heat going to cooling water and exhaust gases; performance curves. Problems.
(8)

Air pollution from I.C. Engine and Its remedies: Pollutants from S.I. and C.I. Engines, Mechanism of formation of pollutants in SI engines, Exhaust emission, emission of unburnt hydrocarbon. Mechanism of formation of pollutants in CI engines. Methods of emission control; alternative fuels for I.C. Engines. **(8)**

COURSE SYLLABUS (Practical):

1. To study the constructional details & working principles of two-stroke or four stroke petrol engine/related case study.
2. To study the constructional detail & working of two-stroke or four stroke diesel engine/ related case study.
3. To draw valve timing diagram of two stroke/four stroke petrol and diesel engines/ related case study.
4. To find the indicated horse power (IHP) on multi-cylinder petrol engine by Morse Test/ related case study.
5. To perform constant speed performance test on a single cylinder diesel engine & draw curves of bhp vs fuel rate, air rate, bhp vs mep, mechanical efficiency & sfc/ related case study.
6. To perform variable speed performance test of a single cylinder diesel engine and prepare the curves (i) bhp, ihp, fhp, vs. speed (ii) volumetric efficiency & indicated specific fuel consumption vs. speed.
7. To perform constant speed performance test on a single cylinder petrol engine & draw curves of (i) bhp vs fuel rate, air rate and (ii) bhp vs mep, mechanical efficiency & sfc.
8. To perform variable speed performance test of a single cylinder petrol engine and prepare the curves (i) bhp, ihp, fhp, vs. speed (ii) volumetric efficiency & indicated specific fuel consumption vs. speed.
9. To prepare heat balance sheet on multi-cylinder petrol engine/ related case study.
10. To prepare heat balance sheet on single cylinder diesel engine/ related case study.

Hours per Week	**L T P: 3 0 2**
Credits	**4**
Students who can take	**B. Tech Semester-VII**

Course Objective:
The objective of this course is to get good exposure for the students to model the behavior of an engineering materials when subjected to a loading system.

Course Outcomes:
On successful completion of this course, the students should be able to:

ME1209.1: model and predict behavior of Engineering Materials under various loading conditions.

ME1209.2: model and predict deformation in the engineering materials under various loading conditions.

ME1209.3: identify types of composites for various applications.

ME1209.4: design various application based metal matrix composites.

COURSE SYLLABUS (Theory):

UNIT – I Modelling of Engineering Materials
Introduction to material modelling, Complexity of material response in engineering, Classification of modelling of material response, Coordinate frame and system, Tensors, Continuum Mech, Kinematics, Balance laws, Constitutive relations

Unit 2: Linear Mechanical Models of Material Deformation
Introduction to LMMMD, Linear elastic solid models, Classes of elastic constants, Materials with single plane of elastic symmetry, Isotropic materials, Maxwell model, Kelvin-Voigt model, Time temperature superposition

Unit-3: Introduction to composite
Define Composites, Reinforcements and matrices, Types of reinforcements, Types of matrices, Types of composites, Carbon Fiber composites, Properties of composites in comparison with standard materials, Applications of metal, ceramic and polymer matrix composites.
Stiffness and Strength of composite: Geometrical aspects – volume and weight fraction. Unidirectional continuous fiber, discontinuous fibers, Short fiber systems, woven reinforcements Mechanical Testing: Determination of stiffness and strengths of unidirectional composites; tension, compression, flexure and shear.

Unit 4: Metal Matrix Composites
Characteristics of MMC, various types of metal matrix composites alloy vs. MMC, advantages of MMC, limitations of MMC, Reinforcements – particles – fibers. Effect of reinforcement volume fraction rule of mixtures. Processing of MMC, powder metallurgy process, diffusion bonding, stir casting, squeeze casting, a spray process, Liquid infiltration, measurement of interface properties- applications of MMC in aerospace, automotive industries
Lamina Constitutive Equations, basic assumptions of laminated anisotropic plates. Laminate Constitutive Equations Coupling Interactions, Balanced Laminates, Symmetric Laminates, Angle Ply Laminates, Cross Ply Laminates. Laminate Structural Moduli. Evaluation of Lamina properties from Laminate Tests.

COURSE SYLLABUS (Practical):

1. Study the mechanical behavior (under tensile loading) of fly ash composites
2. Study the mechanical behavior (under fatigue loading) of fly ash composites
3. Study the mechanical behavior (under impact loading) of fly ash composites
4. Study the mechanical behavior (under tensile loading) of aluminum alloy
5. Study the mechanical behavior (under fatigue loading) of aluminum alloy
6. Study the mechanical behavior (under impact loading) of aluminum alloy

Course Title and Course Code	**Power Plant Engineering (ME1203)**
Hours per Week	**L T P: 3 0 2**
Credits	**4**
Students who can take	**B. Tech Semester-VII**

Course Objective:

Providing an overview of Power Plants and detailing the role of Mechanical Engineers in their operation and maintenance.

Course Outcomes:

On successful completion of this course, the students should be able to:

ME1203.1: Model and compare different boiler's based on high pressure or low pressure

ME1203.2: Draw and construct different power plants based on the working fluid used (diesel, water, etc.)

ME1203.3: Demonstrate various functions of different accessories of boilers

ME1203.4: Critic what would be a sustainable power plant out of all different power plants studies

ME1203.5: Analyze and solve energy and economic related issues in power sectors

COURSE SYLLABUS (Theory):

UNIT – I
Introduction to power plants and Steam Power Plant: Conventional and Non-Conventional Energy Sources, Load-duration curves and definitions, selection of site for steam power plants, Boiler performance, Rankine cycle, Reheat cycle, Regenerative cycle, Surface condenser performance.

UNIT – II
Diesel Power Plant: Diesel engine performance and operation, Power and mechanical efficiency, m.e.p., s.f.c., volumetric efficiency, Thermal efficiency, relative efficiency, Heat balance.

UNIT – III
Gas Turbine Power Plant: Sterling Cycle, Ericson cycle, Brayton cycle, Advantages and Disadvantages of Gas Turbine Plant, Reheating, Regeneration, Intercooling

UNIT – IV
Solar Energy Power Plant: Solar constant, Solar energy collectors, Photovoltaic power system, solar thermal energy power plant, solar central receiver system, PVsyst project design calculation.
Other Power Plants and economics of power plants: Geo-thermal power plant, OTEC power plant, Tidal wave power plant. Cost of Electric Energy - Fixed and operating Costs - Energy Rates - Types of Tariffs.

COURSE SYLLABUS (Practical):

1. To study low pressure boilers and their accessories and mountings.
2. To study high pressure boilers and their accessories and mountings.
3. To prepare heat balance sheet for given boiler.
4. To find power output & efficiency of a steam turbine.
5. To find the condenser efficiencies.
6. To study and find volumetric efficiency of a reciprocating air compressor.
7. To conduct variable speed performance test of a single cylinder diesel engine and prepare the curves (i) bhp, ihp, fhp, vs. speed (ii) volumetric efficiency & indicated specific fuel consumption vs. speed.
8. PVsyst based designing of a solar PV cell project.

Course Title and Code: Geographical Information System (GIS): CE1214	
Hours per Week	**L-T-P: 3 0 2**
Credits	**4**
Students who can take	B. Tech Sem VII sem (All Branches)
Course Objective: This course aims to develop understanding of various methods of remote sensing, satellite images data acquisition, data format and data output. It also explains the major applications of GIS i.e., climate change, natural resources management and water resources management.	
Course Outcomes: **On completion of the course, the student should be able to:** CE1214.1. Asses the various sources for remote sensing data. CE1214.2. Analyze the data from various type of images. CE1214.3. Analyze the data acquisition and data output through GIS and GPS. CE1214.4. Incorporate GIS in resources management and climate changes.	

Prerequisites

	Total (100)	
	Evaluation scheme for retest	
	Theory Exam III	30

Syllabus (Theory)

1. Remote sensing satellites and their data products, Sensors and orbital characteristics, Spectral reflectance curves and resolution

2. Satellite Image - Characteristics and formats, Image histogram, Introduction to Image rectification, Image Enhancement, Land use and land cover classification system, Supervised Classification

3. Basic concepts of geographic data, GIS and its components, Data acquisition, Raster and Vector formats, topology and Data models, Spatial modelling, Data output

4. Application of GIS: Climate change, Natural resources management, Forest management, Water Resources management, Drought Management

5. GPS: Introduction, coordinates and time system, Satellites, Mathematical model of GPS observables, Methods of processing GPS data

Syllabus (Practical)
1. Creating and Exploring a Basic Map
2. Classifying and Creating Vector Data
3. Laying Out of the Maps
4. Classifying and Creating Raster Data
5. Terrain Analysis
6. Raster to Vector Conversion
7. Hydrologic Analysis

Course Title: Fintech in Retail Banking and Insurance
Course Code: FA1151
Credits: 3
Semester: V BBA, VII B Tech
_____
Course Objective:
The course provides overview of how fintech is transforming retail banking and insurance in India.
It provides an overview of various retail banking products (liabilities, 3rd party sales, assets) and insurance products covering in brief product features, sales channels and associates risks.
The course will help prepare students for career in retail financial services industry,
 Course Outcomes:
   a. Introduction to retail banking & its various facets
   b. Introduction to insurance and its various facets
   c. How Fintech is transforming functions across insurance and retail banking and opportunities ahead
Course Content/Topics to be covered:
   - Chapter 1: History of banking and evolution of retail banking
   - Chapter 2: History of Insurance and introduction to Insurance business
   - Chapter 3: Evolution of Fintech and introduction to Fintech
   - Chapter 4: Retail liability products
   - Chapter 5: Third party products
   - Chapter 6: Loan calculator
   - Chapter 7: Retail asset products
   - Chapter 8: Credit Bureau
   - Chapter 9: Life insurance products & roadmap
   - Chapter 10: General insurance products and roadmap
   - Guest lecture by Insurance experts
   - Chapter 11: Fintech… payment gateways
   - Chapter 12: Fintech… lending
   - Chapter 13: Fintech… third party products brokerage, insurance, mutual funds
   - Guest lecture by Fintech industry experts
   - Chapter 14: Life journey of an individual… saving, insurance and retirement planning
   - Chapter 15: Introduction to financial inclusion, small finance banks, microfinance and guest lecture by Small Finance Bank/ MFI expert… Optional
       - Presentation by students

Evaluation Scheme:

Component	Weightage (100)
Minor Projects (5, 10% each)	50%
Mid Term Quiz (30th Sep)	10%
End Term Exam	40%

Course Title and Code:	Advanced Statistics; AS1202
Hours per Week	**L-T-P: 3-0-2**
Credits	**4**
Students who can take	B.Tech Sem VII (Open Elective)

Course Objective- To familiarize students with concepts of probability theory and random variables and use them to analyze real life problems. This course also focuses on developing an understanding of regression models, data analysis, model building, interpretation of results and statistical computation.

Course Outcome:

On successful completion of this course, the students should be able to:

AS1202.1. Identify and formulate fundamental probability distributions and density functions.

AS1202.2. Analyze continuous and discrete-time random variables and processes.

AS1202.3. Analyze system of multiple random variables.

AS1202.4. Compute cumulative distribution function and normalizing constant for the probability density function of one or more random variables.

AS1202.5. Apply the concept of algebra of random variables to analyze various linear systems.

AS1202.6. Design experiments as processes and analyze these using appropriate statistical tool.

Retest		
1	Theory Exam	30

Syllabus (Theory):
RANDOM VARIABLES
Random variables, Distribution and density functions of random variables, Discrete and continuous random variables, Gaussian, Exponential, Rayleigh, Uniform, discrete Uniform and conditional distributions, distribution mean, variance, moments and characteristics functions.

MULTIPLE RANDOM VARIABLES
Function of two random variables, Distributions of two random variables, correlation coefficient, Joint moments, Joint characteristics functions, Conditional distributions, conditional expected values, statistical

independence. Multiple random variables, distribution of sums of random variables, Central limit theorem.

OPERATIONS ON MULTIPLE RANDOM VARIABLES
Mean or expected value of multiple random variables, Variance, standard deviation, moments, Chebyshev's Inequality, moment generating function, characteristic function, covariance, variance of a linear combination of random variables.

REGRESSION ANALYSIS
Introduction to regression model, Types of regression models, Estimation of the regression coefficients and error variance, Inferences for the regression coefficients, Predicting future observations, Inverse prediction and regulation. An introduction to multiple linear regression models.

DESIGN OF EXPERIMENTS
Analysis of variance, one way classification, two-way classification.

PS1102/ PR1105/ PR1104

Practice School-II/ Industrial Project-II/ Entrepreneurial Project/ Research Project

Course Syllabus:
This course is for five four and half months (summer and one semester) in VII or VIII Semester. The objective of this programme is to provide the students, an opportunity to work on live projects of corporate world in various fields. During this programme, they will work on real world applications of their curricula through organizational function of their choice. The students are expected to be involved directly in problem solving efforts of specific interest to the host organization. The learning of PS-I will help them in completing PS-II successfully. PS-II duration of internship is 4 - 4.5 months. PS -II Winter internship Dec to May.

Desired Competence Level (N - Novice, AB - Advanced Beginner, C - Competent)						C	N	N	N	C	C	C	AB	AB	N	AB	AB	AB	AB	N	C	C

Note:
The above-mentioned contributions of the already taught emerging tech and department elective courses is the minimum contribution out of multiple options given to students.
AB is the desired competence level for PO3b an PO3c.
Contribution of courses to be taught is specified as minimum expected contribution.
Open Electives, Practice School 1 and Practice School 2 are excluded from above calculation and their contribution towards attainment of PO and PSO is in addition.
* TBD: To be decided.
