**CURRICULUM STRUCTURE AND SYLLABUS**

**Bachelor of Computer Applications  
(Programme Code: 3108)**

**Batch: 2020-23**

**Institute of Engineering and Technology**

## **Vision**

To be one of India's most innovative higher education institutions.

## **Mission**

To realise its vision, the University will:

Practice teaching that inculcates critical thinking and problem solving,

Pursue research that leads to innovation and enhancement of real-life applications,

Offer experience that leads to all round development, and

Develop a culture that is strongly rooted in interdisciplinarity and learning by building, not just doing.

## **Values**

Caring for people.

Integrity including intellectual honesty, openness, fairness, and trust.

Commitment to excellence.

## IQAC Documentation

**Document Name:** Curriculum Structure and Syllabus Handbook, Bachelor of Computer Applications (Programme Code: 3108) - Batch 2020-2023

**Document Compilation Date:** Jan 24, 2022

**Document Description:** This document supplements the document titled Curriculum Structure: BTech, MTech and BCA Programs and is prepared by the Institute of Engineering and Technology (IET), JKLU to serve as an information baseline for further planning and delivery of courses w.r.t Bachelor of Computer Applications (Programme Code: 3108) - Batch 2020-2023.

It includes Program Education Objectives, Programme Outcomes, Programme Specific Outcomes, Desired minimum level of competence for POs and PSOs, Curriculum Structure, collation of Semester wise Course Description, and Course Articulation Matrix (CAM) of each course (including electives and additional courses, if any, opted by students) prepared by respective faculty members. The document also includes Programme Articulation Matrix (PAM).

This document is in compliance with BoS (upto 13th meeting) and approvals of the Academic Council (upto 20th meeting).

### Document Creation Team:

Dr Sonal Jain

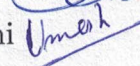

Gaurav Raj

Santosh Verma

Umesh Tripathi

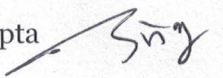

### Quality Checked by:

## Program Education Objectives

The BCA Programs at IET, JKLU are designed to prepare students for continued learning and successful careers. Our alumni are expected to:

**PEOCA1:** Apply their technical knowledge, complex problem solving and research skills in professional practice.

**PEOCA2:** Continue their intellectual development through critical thinking, self- study, apprenticeship, higher education, professional development courses, as well as participation in research groups and professional networks.

**PEOCA3:** Serve as ambassadors for engineering and sustainability by exhibiting high professional standards with a deep sense of civic responsibility.

**PEOCA4:** Effectively communicate about technical and related issues.

**PEOCA5:** Embrace the roles of team members and leaders in their careers.

## Program Outcomes

The graduates of BCA Programs at IET, JKLU will have following competencies:

**POCA1: Life-long learning:** Demonstrate inquisitiveness, open mindedness, and the ability to engage in independent and life-long learning in the broadest context of technological, organizational, economic, and societal changes.

**POCA2: Citizenship, Sustainability, and Professional ethics**

POCA2a: Demonstrate knowledge of constitutional values of liberty, equity, justice, and fraternity with understanding of the impact of the computing solutions in societal and environmental contexts as well as a sense of responsibility for sustainable development.

POCA2b: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, cultural, and environmental issues, and the consequent responsibilities relevant to the professional IT practice.

POCA2c: Demonstrate commitment for professional integrity and excellence and respect for ethics, responsibilities and norms as prescribed for the IT practice.

**POCA3: Computing knowledge and Modern IT tool usage**

POCA3a: Demonstrate clear conceptual understanding of fundamentals of computing and cognitive flexibility to appropriately ‘transfer’ what has been learned in a context, to different situations.

POCA3b: Apply computational thinking, and the knowledge of, computing fundamentals, information technology, and management to the solution of complex computing problems.

POCA3c: Create, select, modify, and apply appropriate techniques, best practices, standards, resources, and modern IT tools with an understanding of the limitations.

**POCA4: Complex problem solving and Design**

POCA4a: Identify, formulate, and analyze complex computing problems to arrive at substantiated conclusions using critical thinking along with principles of computing.

POCA4b: Design and develop information technology solutions for complex problems to meet the specified and anticipated needs with appropriate concern for constraints, performance, sustainability, and professional ethics.

POCA4c: Collect, analyse and interpret data to evaluate and improve the information technology solutions and practice.

**POCA5: Individual & teamwork and IT management.**

POCA5a: Ability to work effectively as an individual and as a team member or leader in diverse and distributed teams, and in multidisciplinary settings.

POCA5b: Ability to apply IT management principles to one’s own and team’s work to manage information technology-based projects and operations and in multidisciplinary environment.

**POCA6: Communication:** Ability to communicate effectively on information technology related activities, situations, problems, and solutions using verbal, textual, and pictorial elements with the colleagues, computing community, users, clients, policy makers, and society at large with intellectual honesty, clarity, empathy, and compassion.

**POCA7: Innovation and entrepreneurship:**

POCA7a: Demonstrate enthusiasm and understanding to identify opportunities and translate new developments in information technology and other disciplines to conceive and design innovative IT solutions for business, industry, and societal problems.

POCA7b: Demonstrate enthusiasm and understanding to conceive and plan IT based new ventures either as independent start-up businesses or within existing corporate structures.

### Program Specific Outcomes

The BCA graduates of JKLU will be able to:

**BCAPSO1:** Conceive, design, implement, and manage data management and information processing systems, services and processes by using principles, techniques and practices of computer programming, data management, application development, data analytics, system administration, sustainability and state of the art platforms, components and tools.

**BCAPSO2:** Serve in ICT areas such as application development, data administration, system administration, data analytics, cyber security, digital media in business, consultancy, industry, government, healthcare, schools, etc., or computer teaching in schools.

#### Program specific desired minimum level of competence for POs and PSOs

PO/PSO	Competence Level
POCA 1	Advanced Beginner
POCA 2a	Novice
POCA 2b	Novice/Advanced Beginner
POCA 2c	Novice
POCA 3a	Advanced Beginner
POCA 3b	Advanced Beginner
POCA 3c	Advanced Beginner
POCA 4a	Advanced Beginner
POCA 4b	Novice
POCA 4c	Novice
POCA 5a	Advanced Beginner
POCA 5b	Novice
POCA 6	Advanced Beginner
POCA 7a	Novice
POCA 7b	Novice
BCAPSO 1	Advanced Beginner
BCAPSO 2	Advanced Beginner

Following process has been adopted to create Course Articulation Matrix (CAM) and Program Articulation Matrix (PAM).

- Course Outcome of each Course is mapped to Program Outcome (PO) / Program Specific Outcome (PSO) using three Levels viz., Low Correlation (1), Moderate Correlation (2) and Substantial Correlation (3).
- Average of these Levels of each Course Outcome w.r.t each specific PO/PSO is calculated, and it indicates expectations laid in a course to attain different PO/PSO. In order to avoid over commitment of a course w.r.t its contribution to POs/PSOs, the following validation check is applied on the sum of PO/PSO wise averages in each course.

$$\sum (\text{Average}) \leq \text{Min} (\text{Credits} * \text{Year}, 15)$$

In above equation, Credits are the credits assigned to the course, Year indicates the level of the students from 1<sup>st</sup> to 3<sup>rd</sup> year. In case this sum exceeds the upper limit, CO-PO mappings are revised. This check ensures that early or low credit courses are not over burdened with very high expectations.

- For creation of Program Articulation Matrix, sum of these averages of different courses w.r.t each PO/PSO is calculated and interpreted as per following Table.

Competence Level *	BCA
Novice	<8
Advanced Beginner	8 - 16
Competent	>=16

**Novice\* (N):** Knows objective facts, features, and rules for determining actions w.r.t this PO/PSO without being context-sensitive. The student has studied the basic concepts.

**Advanced beginner\* (AB):** Recognizes common situations w.r.t this PO/PSO that help in recalling which rules should be exercised, starts to recognize and handle situations not covered by given facts, features and rules. The student has problem-solving and repeated practice experience for common situations w.r.t this PO/PSO.

**Competent\* (C):** Performs most standard actions w.r.t PO/PSO without conscious application of rules after considering the whole situation. Handles new situations through the appropriate application of rules, can design systems, and may lead. Has demonstrated this PO/PSO through repeated engagements in advanced problem-solving, projects, extensive practice in common and exception situations, and participated in professional networks.

<b>Total Credits</b>							<b>121</b>

- For every credit, in each course, every student is expected to put in a total work of 35-36 hours including the class time. The specified teaching scheme is applicable if the course is taught as full semester course. However, sometimes, a few courses may actually be completed in a shorter duration by increasing the weekly contact hours.
- Upto 6 courses can be replaced by appropriate Curated MOOCs with prior permission. For example, students with very strong mathematics background in 12<sup>th</sup> class can replace the 1st semester mathematics course by an appropriate advanced mathematics MOOC.
- Optional Concentrations: (1) Data Analytics, (2) Cloud Computing and Cyber Security, (3) Robotic Process Automation. Students will have to complete 2 electives and project/PS-II (total 14+ credits) in the chosen field.

<b>Course Title and Code: Problem Solving with Python ( CS1115)</b>		
Hours per Week	<b>L-T-P: 3-0-4</b>	
Credits	<b>5</b>	
Students who can take	BCA Sem I	
<b>Course Objective-</b> The aim of the course is to build up a clear understanding of the fundamentals of computer programming. The course is taught using Python programming language. The course will discuss and cover the topics necessary for the students, to write execute and understand the programs on their own.		
<b>Learning Outcomes:</b>		
On successful completion of this course, the students should be able to:		
CS1115.1. Design and program standalone Python applications.		
CS1115.2. Use lists, tuples, and dictionaries in Python programs.		
CS1115.3. Identify Python object types.		
CS1115.4 Design structure and components of a Python program.		
CS1115.5 Use Python Control and Decision making Structures for writing programs		
CS1115.6 Build own Python packages or modules for reusability.		
CS1115.7 Read and write files in Python.		
CS1115.8. Apply Data Handling Techniques of Python		
CS1115.9. Use exception handling in Python applications for error handling, find syntax errors		
CS1115.10. Apply the concepts of object oriented programming in programs written by them.

## Syllabus (Theory):

Fundamentals of Python: Beginnings with Python, Parts of a Program: Modules, Statements and Expressions, Whitespace, Comments, Special Python Elements: Tokens, Naming Objects, Variables, Objects and Types, Operators;

Control: The Selection Statement for Decisions: if,

Repetition: for Statement, In-Depth Control: Boolean Variables, Relational Operators, Boolean Operators, Precedence, while Statement, Nesting.

Functions: What Is a Function? Python Functions, Flow of Control with Functions, Scope, Arguments, Parameters, Default Values and Parameters, Functions as Objects;

Files and Exceptions: What Is a File? Accessing Files: Reading Text Files, Accessing Files: Writing Text Files, Reading and Writing Text Files in a Program, File Creation and Overwriting, Handling Errors: Error Names, the try-except Construct, try-except Flow of Control, Exception;

Strings: The String Type, String Operations, Formatted Output for Strings;

Lists and Tuples: What Is a List? Iteration, Indexing and Slicing, Operators, Lists vs Strings, Split and Other Functions and Methods, Anagrams, Tuples from Lists.

Dictionaries and Sets: Dictionaries, Python Dictionaries, Dictionary Indexing and Assignment, Sets, Python Sets, Methods, Operators, and Functions for Python Sets, Set Methods;

Introduction to Classes: Object-Oriented Programming, Characteristics of OOP, Class and Instance, Object Methods, Fitting into the Python Class Model, Python and OOP, Python and Other OOP Languages, Classes, Inheritance.

## CS1116: Database Management and Applications

<b>Course Title and Code: Database Management and Applications (CS1116)</b>		
<b>Hours per Week</b>	<b>(3 0 4)</b>	
Credits	<b>5</b>	
Students who can take	<b>Bachelors in computer application (BCA)</b>	
<b>Course Objectives:</b> This course introduces an understanding of the fundamental concepts of database systems and modelling of real-world problems using ER-model /UML and to convert ER model into relational model. This course helps students to implement SQL and to normalize a given database. It also includes usage of Excel to analyze database system.		
<b>Learning Outcome:</b> On successful completion of this course, the students should be able to:		
CS1116.1. Outline database system components and their functions CS1116.2. Model the real-world systems from the given requirements specification using Entity Relationship Diagrams/Unified Modelling Language CS1116.3. Apply SQL commands to define, query and manipulate a relational database CS1116.4. For a given query, write relational algebra expressions and optimize the same. CS1116.5. Normalize a given database up to Boyce Codd Normal Form (BCNF) based on identified keys and functional dependencies CS1116.6. Use Excel to import data from Database and analyze it for decision making.

### Retest

1	Theory Exam	30
2	Lab Evaluation	Nil

### Course Contents:

**UNIT I:** Basic Concepts: data, database, database systems, database management systems, instance, schema, Database Applications, Purpose and Advantages of Database Management System (over file systems); Dynamic web applications, Database design standards, Web design standards; View of Data (Data Abstraction, Data Models), Database Languages (DML, DDL), Relational Databases (Tables, DML, DDL), Data Storage and Querying (Components, Storage Manager, Query Processor), Database Architecture, Database User and Administrators

**UNIT II:** Design Phases, Design Alternatives (Major Pitfalls), Entity Relational Model (Entity Sets, Relationship Sets, Attributes), Constraints (Mapping Cardinalities, Keys, Participation Constraints), Entity Relationship Diagram, Weak Entity Set, Extended E-R features (Generalization, Specialization and Aggregation), E-R Notations, Examples of ERD

**UNIT III:** Features of Good Relational Design, Atomic Domain and First Normal Form, Decomposition Using Functional Dependency (Key and Functional Dependency, BCNF, 2NF, 3NF), Functional Decomposition Theory (Closure Set of Functional Dependency with Armstrong Rules, Canonical Cover and Lossless Decomposition), Dependency Preservation, Comparison of 3NF and BCNF,

**UNIT IV:** Structure of Relational Databases (Basic Structure, Database Schema, Types of Keys), Fundamental Relational Algebra Operations (Select, Project, Union, Set Difference, Cartesian Product and Rename Operator), Additional Relational Algebra Operators (Set Intersection, Natural Join, Division

Operator, Assignment Operator), Examples

**UNIT V:** Hands on Excel, Importing Database in Excel, applying database functions in Excel, analyzing database using Excel.

<b>Course Title and Code: Computer Organisation and Systems (CS1117)</b>		
Hours per Week	<b>L-T-P: 3-0-2</b>	
Credits	<b>4</b>	
Students who can take	BCA SEM-I	
<p><b>Course Objectives:</b> To study the basic organization and architecture of digital computers (CPU, memory, I/O, software). Discussions will include digital logic and microprogramming. Learners would be able to program to optimize cache hit and estimate cost of different hardware for the number systems. Such knowledge leads to better understanding and utilization of digital computers, and can be used in the design and application of computer systems or as foundation for more advanced computer-related studies.</p>		
<p><b>Course Outcome:</b> On successful completion of this course, the students should be able to:</p> <p>CS1117.1. Draw the functional block diagram of single bus architecture of a computer and describe the function of the instruction execution cycle, RTL interpretation of instructions, addressing modes, instruction set.</p> <p>CS1117.2. Summarize and compare different computer systems.</p> <p>CS1117.3. Categorize different types of computers based on Instruction set Architecture.</p> <p>CS1117.4. Develop assembly language programs for multiplication, division, and I/O interface using 8086.</p> <p>CS1117.5. Given a CPU organization and instruction, design a memory module and analyze its operation by interfacing with the CPU.</p> <p>CS1117.6. Write a flowchart for Concurrent access to memory and cache coherency in Parallel Processors and describe the process.</p> <p>CS1117.7. Given a CPU organization, assess its performance, and apply design techniques to enhance performance using pipelining, parallelism and RISC methodology.</p> <p>CS1117.8. Analyze the performance of pipeline and cache-based systems.</p> <p>CS1117.9. Design algorithms to optimize hit-rate in cache memory.</p> <p>CS1117.10. Program and estimate the execution time of arithmetic functions using different number systems.</p>

### **Course Syllabi (Theory):**

**Unit I: DIGITAL FUNDAMENTALS:** Number Systems – Decimal, Binary, Octal, Hexadecimal, 1’s and 2’s complements, Codes – Binary, BCD, Excess 3, Gray, Alphanumeric codes, Boolean theorems, Logic gates, Universal gates, Combinational and Sequential circuits.

**Unit II: BASIC STRUCTURE OF COMPUTERS:** Functional units, Basic operational concepts, Bus structures, Number, Instructions and instruction sequencing, Instruction set architecture, Addressing modes, RISC, CISC. ALU design, Fixed point and floating-point operations.

**Unit III: BASIC PROCESSING UNIT:** Fundamental concepts, Execution of a complete instruction, Multiple bus organization, Hardwired control, Micro programmed control, Pipelining.

**Unit IV: MEMORY SYSTEM:** Basic concepts, Memory Hierarchy, Semiconductor RAM, ROM, Speed, Size and cost, Cache memories, Virtual memory, Memory management, Associative memories, Secondary storage devices.

**Unit V: I/O ORGANIZATION:** Accessing I/O devices, Programmed Input/Output, Interrupts, Direct Memory Access, Buses, Standard I/O Interfaces (PCI, SCSI, USB), I/O devices and processors.

## Syllabus

### **Unit 1: Combinatorics**

Introduction to infinite series and binomial expansion, Principles of counting

### **Unit 2: Sets**

Definition and types of sets, Set operations, Venn Diagram, Partition of set, Cardinality of a set, Inclusion- Exclusion Principle.

### **Unit 3: Relations and Functions**

Definition and types of functions; Domain, Range and graphs of commonly used functions: logarithmic, exponential, trigonometric, inverse trigonometric; Composition of functions, Inverse of a function.

Cartesian product of sets, Binary relations, Operations on relations, Equivalence relations and Equivalence classes.

### **Unit 4: Differential Calculus**

Concept of limits, Continuity and differentiability; Differentiation; Related rates; Maxima and minima of functions of one variable.

### **Unit 5: Integral Calculus:**

Integration as an inverse process of differentiation, Introduction to the methods of indefinite integration, Definite integrals and its properties, Concept of area of region bounded by simple curves.

<b>Course Title and Code:</b>		<b>Fundamentals of Communication: CC1101</b>
Hours per Week	<b>L-T-P: 2-0-1</b>	
Credits	<b>2</b>	
Students who can take	B.Tech/BCA Sem I	
<p><b>Course Objective-</b> This course provides an introduction to the importance of effective communication, the consequences of poor communication, and the different elements of verbal and non-verbal communication. Students learn about, and enhance, the components of communication: kinesics, paralanguage (voice) and language.</p>		
<p><b>Course Outcome:</b>  On successful completion of this course, the students should be able to:  CC1101.1 Identify different cultural differences and their impact on communication.  CC1101.2 Compose grammatically correct sentences and paragraphs.  CC1101.3 Deliver effective oral presentations following appropriate kinesics and paralinguistic features.  CC1101.4 Identify impact of cultural differences on communication.  CC1101.5 Apply appropriate communication skills across settings, purposes, and audiences.</p>

**Course Name: JAVA Programming****Course Code: CS1118****L-T-P: 3-0-4.****Credits: 5**

**Course Objective:** This course teaches object-oriented programming to those who have learnt basic programming concepts and are ready to learn in-depth programming. It focuses on object-oriented programming using JAVA. The main concepts are Classes, Objects, Data Abstraction, Data Encapsulation, Overloading, Overriding, Polymorphism, Inheritance, Interfaces, Exception Handling, and Database Connectivity. This course also covers basic concepts for software design and reuse.

**Learning Outcome:**

On successful completion of this course, the students should be able to:

- CS1118.1. Develop Java Programs with the concepts of primitive data types, strings and arrays.
- CS1118.2. Develop Java Programs using Object Oriented Programming Principles such as Classes, Objects, Data Abstraction, Data Encapsulation, Overloading, Overriding.
- CS1118.3. Design, develop and debug programs in Core Java using coding and documentation standards.
- CS1118.4. Incorporate exception handling in Java Programs.
- CS1118.5. Apply Polymorphism, Inheritance, and Interfaces in writing softwares.

**NOTE: Integrated Development Environments (IDEs) to be used in this Course are Eclipse or NetBeans – Both are compatible for Object Oriented Programming using Java.**

Basics of Java & Decision Statements - Introduction to Java: Features of Java, Byte Code and JVM, JDK, JRE; Data types and Operators: Lexical Tokens, Identifiers, Keywords, Literals, Comments, Primitive Datatypes, ADT, Operator types and precedence, Statements and Flow Control: Conditional statements, looping, return, etc., Abstract data types and their specification. How to implement an ADT. Concrete state space, concrete invariant, abstraction function.

Control Structures, Methods & Constructors - Object Oriented Programming in Java: Object Life time & Garbage Collection.

Methods & Constructors - Constructor & initialization code block, Parameterized Constructor, Loops, Methods.

Array & String - Defining an Array, Initializing & Accessing Array, Multi –Dimensional Array, Operation on String, Mutable & Immutable String, Collection Bases Loop for String, tokenizing a String, Creating Strings using StringBuffer.

OOP's Concept I - Class Fundamentals, Object & Object reference, Access Control, Modifiers, Methods in Java: Method Declarations, Method Signatures, Invoking Methods,

OOP's Concept II - Static vs. Instance Data Fields, Static vs. Instance Methods, Method Overloading, Encapsulation.

Inheritance, Composition, and Aggregation, Invoking Base Class Constructors, Overriding vs. Overloading, Polymorphism Overloading.

Interfaces - Inner Class & Anonymous Classes, Abstract Class, Interfaces.

Exception Handling - Introduction to Exception handling.

**Course Contents:**

**Web Design Principles:** Basic principles involved in developing a web site, Planning process, Five Golden rules of web designing, Designing navigation bar, Home Page Layout, Design Concept.

**Basics in Web Design:** Brief History of Internet, World Wide Web, utility of web site, Web Standards, Audience requirement.

**Introduction to HTML:** HTML Documents, Basic structure of an HTML document, creating an HTML document, Mark up Tags, Heading-Paragraphs, Line Breaks, HTML Tags.

**Elements of HTML:** Working with Text, working with Lists, Tables and Frames, working with Hyperlinks, Images and Multimedia, working with Forms and controls.

**Cascading Style Sheets:** Concept of CSS, Creating Style Sheet, CSS Properties, CSS Styling (Background, Text Format, Controlling Fonts), Working with block elements and objects, working with Lists and Tables, CSS Id and Class, Box Model (Introduction, Border properties, Padding Properties, Margin properties), CSS Advanced (Grouping, Dimension, Display, Positioning, Floating, Align, Pseudo class, Navigation Bar, Image Sprites, Attribute selector), CSS Color, Creating page Layout and Site Designs.

**JavaScript:** JavaScript Programming, Writing Functions, Dynamic Web Page Creation, Built in Functions & Methods, Pattern Matching, Events.

**Text Books:**

<b>Course Title and Code: Operating Systems and Linux Administration (CS1120)</b>		
Hours per Week	<b>L-T-P: 2-0-4</b>	
Credits	<b>4</b>	
Students who can take	BCA Semester II	
<b>Course Objectives:</b>		
<p>The main aim of this course is to develop an understanding of the fundamental concepts and techniques of operating systems. The course aims to explain the importance of the operating system, its function and different techniques to achieve its goals as resource manager. The course also elaborates how applications interact with the operating system and how the operating systems interact with the machine. This course builds upon the first Semester course on Computer Architecture &amp; Organisation and lays the foundation for the course on Computer Network and Network Administration.</p>		
<b>Course Outcome:</b>		
<p>On successful completion of this course, the students will be able to:</p> <p>CS1120.1. Use basic LINUX commands: file/directory handling, standard I/O, redirection, pipes, and filters.</p> <p>CS1120.2. Analyze the structure of OS and its interface with hardware.</p> <p>CS1120.3. Differentiate between different types of operating systems – Multiprogramming systems, Time-sharing systems, Parallel systems, Real-Time systems, Distributed systems, and Mobile’s systems. Compare Windows, Android, and LINUX OS with respect to their key features and functionality.</p> <p>CS1120.4. Correlate basic concepts of operating system with an existing operating system.</p> <p>CS1120.5. Implement and assess the performance of different types of scheduling algorithms.</p> <p>CS1120.6. Examine process synchronization and Inter process communication- Race condition, semaphores, monitors; inter process communication through message passing.</p> <p>CS1120.7. Categorize the conditions that cause deadlock in resource allocation. Implement deadlock-handling strategies.</p> <p>CS1120.8. Analyze paging, segmentation, and segmentation with paging for VM support in memory management.</p>

### **Syllabus (Theory)**

**UNIT-1: Introduction to OS:** Concept of Operating Systems, Generations of Operating systems, Types of Operating Systems, services, system calls, characteristics of OS, Structure of an OS-Layered, Monolithic, Microkernel Operating Systems, Concept of Virtual Machine. Introduction to Linux, Features, Importance, History, Evolution, File handling Utilities, Administration commands. Case study on LINUX and WINDOWS Operating System.

**UNIT-2: Process:** Concept of process, Process states, Process State transitions, Process Control Block (PCB), Context switching, Thread: Definition, Benefits of threads, Types of threads, multithreading. Process scheduling: Foundation and Scheduling objectives, Types of Schedulers. Scheduling criteria: CPU utilization, Throughput, Turnaround Time, Waiting Time, Response Time. Various Scheduling algorithms (FCFS, SJF, RR, priority scheduling). Inter process communication: Critical section, Race condition, semaphores, monitors, message passing, Classical IPC Problems: Readers-Writer Problem, Dining Philosopher Problem etc. Deadlock: Shared resources, resource allocation and scheduling, resource graph models, deadlock prevention, deadlock avoidance, deadlock detection, deadlock recovery algorithms.

**UNIT-3: Memory Management:** Memory management schemes, Contiguous/Non-contiguous memory allocation, storage management, paging, page table structure, segmentation, segmentation with paging, virtual memory, demand paging, page fault, and Page replacement algorithms.

**UNIT-4: File System:** Linux Files, Directories and Archives, The vi editor, file concept, types and structures, attributes of a file, operations performed on file, File organization and access method, file allocation methods, directory structure, file directories, directory implementation. LINUX: Kernel Administration, Managing Users, Managing File Systems, Linux File Permissions,

**UNIT-5:** Advanced Operating System, Protection and security: Illustrations of security model of LINUX and other OSs. Examples of attacks.

### **Contents (Lab)**

- Linux Operating System, components of Linux system.
- Basic LINUX commands and its Use.
- Execution of various file/directory handling commands.
- Commands related to standard I/O, Redirection, Pipes and Filters.
- Process Management Commands in Linux.
- Shell scripting in Linux.
- Implementation of CPU Scheduling Algorithms.
- Implement Semaphores.
- Implement of Banker's Algorithm for Deadlock Avoidance.
- Implement the page replacement algorithms.
- Implement disk-scheduling algorithms.

## **Syllabus**

### **Unit 1: Multivariate Calculus**

Functions of two or more variables, Partial Derivatives, Total derivative, chain Rule, Euler's Theorem, Jacobian and transformation, Applications to errors, Maxima-Minima of functions of two variables

### **Unit 2: Linear Algebra**

Matrix Operations, Eliminations, Matrix Inversion, Transformation, Solution of Linear Simultaneous Equation, Eigen Values & Eigen Vectors, Cayley-Hamilton theorem

### **Unit 3: Numerical Methods**

Transcendental and polynomial equation, Solutions to linear simultaneous equations, Interpolation and approximation, Numerical differentiation and integration, Solutions to ordinary differential equations

### **Unit 4: Mathematical Logics**

Proposition, Compound Proposition, Conjunction, Disjunction, Implication, Converse, Inverse & Contrapositive, Bi-conditional Statements, Mathematical Proof Methods

Credits	<b>3</b>	
Students who can take	BCA II Sem.	
<p><b>Course Objective-</b> This course is designed to provide students with an overview of the management functions and its role in organizations. The course aims to provide students with the basic managerial knowledge. This course attempts to develop a "system" view of organizations.</p>		
<p><b>Course Outcome:</b>  On successful completion of this course, the students should be able to:  IL1103.1. Evaluate the context for taking managerial actions of planning, organizing andcontrolling.  IL1103.2. Assess global situation, including opportunities and threats that will impact management of an organization.  IL1103.3. Specify how the managerial tasks of planning, organizing, directing and controlling can be executed in a variety of circumstances.  IL1103.4. Know and analyze how decisions are made within an organization and how those decisions are communicated to the various stakeholders.</p>

## **Syllabus :**

**The Basis of Global Management Theory & Practice:** Essentials of Management- Introduction, Nature, Purpose. Management Science or Art? Generic Functions of Management. Managerial Skills & Management Roles.

Evolution of Management Theory- Major Schools of Management Theory: Classical, Neo Classical, Behavioral and Modern school. System Approach- how it can integrate management concepts? Management & Society- The external environment, Social responsibility & Ethics.

**Planning and decision making:** Nature & importance of planning, steps in planning, Objectives, evolving concept MBO, Strategic planning process, The TOWS Matrix, Porter's industry analysis, planning skills, Steps in rational decision making.

**Organizing and organization structure:** Nature and purpose of organizing, principles of organizing, Span of Management, Organization Structure- Departmentation: by function, by territory, by product, by customer group. SBU, Organization structures for global environment, Choosing the pattern of departmentation.

**Staffing:** Overview, Importance of proper staffing, Manpower planning, recruitment, selection, placement, induction. (Through cases- hiring right persons, job analysis, Getting well qualified employees).

**Directing:** Overview, Requirements of effective direction, Motivation and its role in directing; Leadership: overview, approaches, factors determining leadership style.

**Control:** Need, essential of effective control systems, steps in control process, techniques.

<b>Course Title and Code: Critical Thinking and Storytelling   CC1102</b>		
<b>Course Objective:</b> The modern world offers confounding opinions and choices that need to be navigated judiciously. This course explores frameworks and processes to critically examine narratives, reconstruct them, and craft well-reasoned stories that can be told using impactful communication.		
<b>Learning Outcomes:</b> <i>The students will be able to:</i> CC1102.1. Formulate intelligent questions to investigate. CC1102.2. Evaluate information and argument for correctness, consistency, relevance and validity. CC1102.3. Compose well-structured and well-reasoned arguments. CC1102.4. Articulate and evaluate the impact of narratives. CC1102.5. Distinguish between facts, assumptions, and opinion.

## Syllabus of Critical Thinking and Storytelling

- I. Introduction to Critical Thinking- Definitions of Critical Thinking, its applications and the methods to think critically. Paul & Elder model will be used.
- II. **Importance of questioning**-The key to critical thinking is the ability to formulate intelligent questions. Students will be able to create, improve and prioritize their questions. They will be able to use different types of question by using Bloom’s taxonomy to understand the root of any situation, problem or subject.
- III. **Examine data Critically**-Students will be able to filter information, separate fact from opinion, identify cognitive biases and become aware of the ladder of inference. They will also be taught to conduct responsible research and basics of bibliography and citation.
- IV. **Construct and reconstruct argument**- Students will be taught to construct arguments with sound reasoning. They will be able to support their claims and opinions with compelling data and facts, and present well-informed arguments. Evaluate argument using logical fallacies.
- V. **Building a compelling Narrative**- Stories that we create and narrate influence how we see ourselves and our association with others. The students will be able to observe, think, create and narrate their stories in an effective manner.

Students who can take		BCA Semester III
<p><b>Course Objective-</b> This course aims to develop understanding for Design, Analysis, and implementation of data structures and algorithms to solve computational problems using an object-oriented programming language. Topics includes introduction to algorithms and complexity analysis (time &amp; space), Recursion, Linear Data Structures (Arrays, Queue, Stack, linked list), Non-linear data structures (Trees, Graphs), Searching, Sorting, Indexing and Hashing.</p>		
<p><b>Course Outcome:</b> On successful completion of this course, the students should be able to:</p> <p>CS1122.1. Describe how arrays, linked lists, stacks, queues, trees, and graphs are represented in memory and used by algorithms.</p> <p>CS1122.2. Write programs that use arrays, records, linked structures, stacks, queues, trees, and graphs.</p> <p>CS1122.3. Compare alternative implementations of data structures with respect to performance</p> <p>CS1122.4. Analyze the algorithms in terms of asymptotic time and space complexity.</p> <p>CS1122.5. Implement and compare various searching and sorting algorithms.</p>

## **Syllabus (Theory):**

**Module-1:** Advanced C programming: 1-D and 2-D arrays, Pointers, handling arrays through pointers, pointer arithmetic, passing pointers as parameters to functions, pointers for inter-function communication, structures: typedef and struct keywords, dot and arrow operators, nested structs, structs containing arrays, struct containing pointers, pointer to struct, passing struct through pointers. Dynamic memory allocation, use of malloc, calloc, realloc, free. Basic file handling, pointer basics, passing pointer to variables in functions. FILE handling, opening modes, fprintf, fscanf, fread and fwrite syntax.

**Module-2:** Analysis of time and space complexity, Implementations and applications of elementary data structures - Stacks, Queues, Deque, linked list, binary trees, sparse matrix, Stack and queue: array-based implementation, applications. Deque using array. Link List: creation, traversal, insertion and deletion. Some simple applications of LL. Binary tree –Theory, array-based implementation, recursive tree traversals. Binary tree pointer-based storage. Sparse matrix, usages and Storages using LL. Graphs: Implementations using LL and Adjacency Matrix. Linear and binary search, insertion, selection, bubble, merge, quick sort. Heap sort. Topological sort.

**Module-3:** Object Oriented Programming - Concepts of Object-Orientation in C++, constructs, objects, classes, methods, constructors, function and operator overloading, inheritance, polymorphism. Introduction to SDLC. Testing fundamentals and test-case generation.

## **LAB**

1. Write a simple C program on a 32-bit compiler to understand the concept of array storage, size of a word. The program shall be written illustrating the concept of row major and column major storage. Find the address of element and verify it with the theoretical value. Program may be written for arrays Upto 4-dimensions.
2. Simulate a stack, queue, circular queue and dequeue using a one-dimensional array as storage element. The program should implement the basic addition, deletion and traversal operations.
3. Represent a 2-variable polynomial using array. Use this representation to implement addition of polynomials.
4. Represent a sparse matrix using array. Implement addition and transposition operations using the representation.
5. Implement singly, doubly and circularly connected linked lists illustrating operations like addition at different locations, deletion from specified locations and traversal.
6. Repeat exercises 2, 3 & 4 with linked structures.
7. Implementation of binary tree with operations like addition, deletion, traversal.
8. Depth first and breadth first traversal of graphs represented using adjacency matrix and list.
9. Implementation of binary search in arrays and on linked Binary Search Tree.
10. Implementation of bubble, insertion, merge, quick, heap, topological and bubble sorting algorithms.

## Syllabus (Theory)

### **Module I – Mobile Application Overview**

Introduction to Mobile Computing, Introduction to Android Development Environment, Mobile Software Engineering, Design of application (view level).

### **Module II – Framework and User Interface Development**

Frameworks and Tools, Generic UI Development, Android User (privileges), VUIs and Mobile Apps Text-to-Speech Techniques, Designing the Right UI, Multichannel and Multimodal UIs, Android Intents and Services, Characteristics of Mobile Applications  
Successful Mobile Development.

### **Module III – Storing Retrieving Data with Real-time Database**

Synchronization and Replication of Mobile Data, Getting the Model Right, Android Storing and Retrieving Data, Working with a Content Provider, Communications Via Network and the Web, State Machine, Correct Communications Model, Android Networking and Web.

### **Module IV – Notifications, Alarming and Location**

Performance and Memory Management, Android Notifications and Alarms, Graphics, Performance and Multithreading, Graphics and UI Performance, Android Graphics and Multimedia, Mobile Agents and Peer-to-Peer Architecture, Android Multimedia, Mobility and Location Based Services.

### **Text Books and References:**

1. Android Cookbook, 2nd Edition by Ian F. Darwin Publisher: O'Reilly Media, Inc. Release Date: May 2017
2. Sam's Teach yourself Android Application Development. by Lauren Darcey and Shane Conder : 2012
3. Professional Android 4 Application Development by Reto Meier, 2012
4. Android Programming for Beginners by John Horton, 31 Dec 2015

<b>Course Title and Code: Computer Networks and Network Administration (CS1124)</b>		
Hours per Week	<b>L-T-P: 2-0-4</b>	
Credits	<b>4</b>	
Students who can take	BCA Semester III	
<p><b>Course Objective:</b> The course objectives include learning about computer network organization and implementation, obtaining a theoretical understanding of data communication and computer networks, and gaining practical experience in installation, monitoring, and troubleshooting of current LAN systems. This course introduces an understanding of the fundamental concepts of computer networking, layers of protocols and network technologies. This course lays the foundation for the courses on Virtualization and Cloud Computing, Applied IoT as well as Information Security.</p>		
<p><b>Course Outcome:</b></p> <p>On successful completion of this course, the students should be able to:</p> <p>CS1124.1. Build simple LANs, perform basic configurations for routers and switches, and implement IPv4 and IPv6 addressing schemes.</p> <p>CS1124.2. Identify the different types of network topologies and protocols.</p> <p>CS1124.3. Analyse the requirements for a given organizational structure and select the most appropriate networking architecture and technologies.</p> <p>CS1124.4. Configure routers, switches, and end devices to provide access to local and remote network resources and to enable end-to-end connectivity between remote devices.</p> <p>CS1124.5. Configure and troubleshoot connectivity a small network using security best practices.</p> <p>CS1124.6. Evaluate the challenges in building networks and solutions to those.</p>

### **Course Syllabus (Theory):**

- **Unit I-** Introduction Concepts: Goals and Applications of Networks, Network structure and architecture, The OSI reference model, services, Network Topology Design - Delay Analysis, Back Bone Design, Local Access Network Design, Physical Layer Transmission Media, Switching methods, ISDN, Terminal Handling.
- **Unit II-** Medium Access sub layer: Medium Access sub layer - Channel Allocations, LAN protocols - ALOHA protocols - Overview of IEEE standards - FDDI. Data Link Layer - Elementary Data Link Protocols, Sliding Window protocols, Error Handling.
- **Unit III-** Network Layer: Network Layer - Point - to Point Networks, routing, Congestion control Internetworking -TCP / IP, IP packet, IP address, IPv6.
- **Unit IV-** Transport Layer: Transport Layer - Design issues, connection management, session Layer- Design issues, remote procedure call. Presentation Layer-Design issues, Data compression techniques, cryptography - TCP - Window Management.
- **Unit V-** Application Layer: Application Layer: File Transfer, Access and Management, Electronic mail, Virtual Terminals, Other application. Example Networks - Internet and Public Networks. Introduction to Firewall, IDS, SSH, Key Certificates, etc. Understanding Exposure Risk.

### **Lab Syllabus (all experiment in CISCO Packet Tracer).**

Unit/ Title	
1	Study of Network Devices in Detail.
2	Study of basic network command and Network configuration commands.
3	Study of different types of network cables and practically implement the cross wired cable and straight through cable using clamping tool.
4	Connect the computers in Local Area Network.
6	Study of network IP.
7	Configure a DHCP using packet tracer software.
8	Configure an FTP, HTTP and Servers using packet tracer software.
9	Configuring an Switch and Wireless Access point
10	Configuring a router and security measures in a router
11	Configuring a router for remote access with Telnet and SSH
12	Configure a Network using RIP (Distance Vector Routing protocol).
13	Configure Network using Link OSPF (State Vector Routing protocol).
14	Configure Network using ACL (Access Control List) and VLAN.

<b>Course Title and Code: Economics and Accounting (IL1104)</b>		
Hours per Week	<b>L-T-P: 3-0-0</b>	
Credits	<b>3</b>	
Students who can take	BCA III Sem.	
<p><b>Course Objective-</b> This course will prepare students to understand business from the perspective of economics and accounting. Economics will impart knowledge towards use of limited resources in decision making while accounting will help to understand the basic financial statements and concepts to perform analysis.</p>		
<p><b>Course Outcome:</b>            On successful completion of this course, the students should be able to:            IL1104.1. Apply the fundamental economic concepts, theories of economic analysis for decision making.            IL1104.2. Comprehend the sales, output, pricing and market strategies against the dynamic business environment in different market structures.            IL1104.3. Apply the various macroeconomic variables/ concepts and their interlinkages with each other.            IL1104.4. Identify and distinguish the mechanism for recording, classifying and summarizing business transactions.            IL1104.5 Develop competency for the preparation of the financial statements of a corporate enterprise – Balance Sheet, Statement of Profit and Loss.            IL1104.6. Analyze and interpret financial statements by performing financial ratio analysis.</p>

### **Syllabus :**

#### **Module I (Economics)**

- Basic economic terms
- Working of an economy
- Laws of Demand and Supply and market Equilibrium
- Elasticity of demand and its application
- Production function
- Concepts of cost and revenue
- Price and output determination under different Market Structures

- Measurement National Income
- Major Macroeconomics concepts

### Module II (Accounting)

- Financial Accounting Framework
- Preparation of Key Financial Statements
- Financial Statement Analysis
- Digital Accounting

#### Text Books:

- **T1:** Dwivedi, D. N. (2009). Principles of Economics, Vikas Publishing House Pvt Ltd.
- **T2:** Narayanaswamy, R. (2014). Financial Accounting – A managerial perspective (6th edition), PHI Learning Private Limited.

<b>Course Title and Code: Perspectives on Contemporary Issues (CC1103)</b>		
Hours per Week	<b>L-T-P: 2-0-1</b>	
Credits	<b>2</b>	
Students who can take	<b>B.Tech-BCASem III</b>	
<b>Course Objective-</b>		
In an era of globalization, there is an increasing need for the youth to be able to empathize with others, value diverse perspectives and cultures and understand how events around the world are intertwined. Global issues revolve around social, economic and environmental factors which ultimately add to the interconnectedness of countries. In this course, students will employ key critical thinking concepts to analyze contemporary issues from multiple perspectives. They will explore the impact at micro and macro levels.		
<b>Course Outcome:</b>		
On successful completion of this course, the students should be able to:		
CC1103.1: Identify different perspectives objectively.		
CC1103.2: Explain interconnectedness of the issues and their impact at micro and macro levels.		
CC1103.3: Recognize their own beliefs, biases, claims and assumptions.		
CC1103.4: Evaluate sources, argue and defend effectively.

**Retest**

1	Theory Exam	30
---	-------------	----

**Syllabus (Theory):**

Research, analysis & evaluation of a topic from local, national and global perspectives.

➤ **Globalization**

With increasing development throughout the world, the focus of this theme will be on the impact of adopting policy of neoliberalism globally. Changes in India after implementation of new economic policy of 1991.

➤ **Poverty and Inequality**

What do you mean by wealth & equality? Is it enough to ascribe monetary values to human lives? Who has benefited from an increased access to resources, labour & capital due to globalisation? Which groups are historically marginalised & suffer from unequal access to opportunities

➤ **Social justice and human rights**

An understanding of the impact of inequality and discrimination, the importance of standing up for our own rights and our responsibility to respect the rights of others.

➤ **Climate Change and Sustainability**

Understanding the magnitude of the issue, its impact and future challenges. How we can meet our current needs without diminishing the quality of the environment or reducing the capacity of future generations to meet their own needs.

➤ **Technology**

Impact of unprecedented technological growth, challenges and opportunities. Is technocracy a boon or a bane?

## Algorithm Design and Analysis

<b>Course Title and Code: Algorithm Design and Analysis (CS1126)</b>		
Hours per Week	<b>L-T-P: 3-0-2</b>	
Credits	<b>4 (CSE)</b>	
<b>Course Objective:</b> This course introduces an understanding of the design and analysis of algorithms. The course aims to develop a familiarity with important algorithms and data structures and an ability to analyze the asymptotic performance of algorithms. It will equip the students to apply important algorithmic design paradigms and methods of analysis to develop efficient algorithms in common engineering design situations.		
<b>Course Outcome:</b> On successful completion of this course, the students should be able to:  CS1126.1. Analyze the complexity of different algorithms using asymptotic analysis. CS1126.2. Analyze and select an appropriate data structure for a computing problem. CS1126.3. Differentiate and apply different algorithm designs technique: Divide and Conquer Technique, Greedy and Dynamic Programming. CS1126.4. Develop algorithm and programs using Divide and Conquer technique to solve various computing problems. CS1126.5. Develop algorithms and programs using Greedy and Dynamic Programming technique to solve various computing problems.

### **Syllabus (Theory):**

**UNIT I:** Introduction: Algorithms, Analyzing algorithms, Complexity of algorithms, Growth of functions, Performance measurements, Types of approaches.

**UNIT II:** Selection sort, Bubble sort, Insertion Sort, Shell sort, Quick sort, Merge sort, Heap sort, sorting in linear time: Radix sort, Counting Sort, Comparison of sorting algorithms, Divide and Conquer with examples such as Sorting, Matrix Multiplication, Convex hull and Searching. BFS, DFS, Topological sort.

**UNIT III:** Greedy methods, Elements of Greedy Strategy, Activity Selection Problem, Huffman Codes, Matroids Task Scheduling, Minimum Spanning trees – Prim’s and Kruskal’s algorithms, Single-source shortest paths - Dijkstra’s and Bellman-Ford algorithms.

**UNIT IV:** Dynamic programming, Elements of Dynamic Programming, Matrix Chain Multiplication, Longest Common Subsequence, Optimal Polygon Triangulation, all pair shortest paths – Warshall’s and Floyd’s algorithms.

### **Text Book(s)**

1. Thomas H. Cormen, Charles E. Leiserson and Ronald L. Rivest, “Introduction to Algorithms”, Prentice Hall of India. 2002

### **Reference Book(s)**

1. RCT Lee, SS Tseng, RC Chang and YT Tsai. Introduction to the Design and Analysis of Algorithms. Mc Graw Hill, 2005.
2. E. Horowitz & S Sahni. Fundamentals of Computer Algorithms. 1984
3. Berman, Paul. Algorithms. Cengage Learning. 2002
4. Aho, Hopcraft, Ullman, The Design and Analysis of Computer Algorithms. Pearson Education, 2008.

### **Syllabus (Practical):**

#### **1. SEARCHING AND SORTING BASED PROBLEMS**

- I. Implement an algorithm to find an element in a matrix in which each row and each column is sorted.
- II. Implement an efficient algorithm to find a majority element in an array. A majority element is one whose number of occurrences is more than half the size of the array.
- III. Given an array [a<sub>1</sub> to a<sub>n</sub>] construct another array [b<sub>1</sub> to b<sub>n</sub>] where  $b_i = a_1 * a_2 * \dots * a_n / a_i$ . You are allowed to use only constant space and the time complexity is O(n). No divisions are allowed
- IV. Implement the following sorting algorithms: Insertion, Selection, Bubble.

#### **2. DIVIDE AND CONQUER**

- I. Write a program to implement quick merge sort using recursive procedures.
- II. To implement finding greatest common divisor between two positive integers.

III. To implement Matrix Multiplication and analyze its time complexity.

### 3. GREEDY AND DYNAMIC PROGRAMMING

- I. To implement Longest Common Subsequence problem and analyze its time complexity.
- II. To implement Dijkstra's algorithm and analyze its time complexity.

<b>Course Title and Code: Robotic Process Automation Lab (CS1125)</b>		
Hours per Week	<b>L-T-P: 0-0-4</b>	
Credits	<b>2</b>	
Students who can take	BCA Sem IV	
<b>Course Objective-</b> The course aim is to develop understanding about Intelligent Automation through Robotic Process Automation for automating business processes using software robots with cost efficient digital delivery.		
<b>Course Outcome:</b> On successful completion of this course, the students should be able to: CS1125.1 Use and understand the various functionalities and features of UiPath Studio and Orchestrator. CS1125.2 Design, implement, and use RPA activities. CS1125.3 Develop basic robots using UiPath Community Edition. CS1125.4 Explore various data extraction techniques. CS1125.5 Identify processes which can be automated. CS1125.6 Apply best practices in RPA projects.

#### Retest

1	Quiz	20
2	Lab Evaluation-I (Test)	20

#### Syllabus (Theory):

Unit I: Programming Basic & Recap: Programming concept basic; **Introduction to RPA:** scopes and techniques of automation, RPA components and various RPA platforms, Introduction to UiPath as RPA platform, Applications and Benefits of RPA, Introduction to UiPath Studio, UiPath robot, types of robots, and UiPath Orchestrator. Brief on Studio interface and components.

Unit II: **RPA Projects:** Types of Projects in RPA: Sequence, Flowcharts, and State machines; Variables, Arguments, Data Types and Control flow: flow chart activities and sequences activities. **Data Manipulation:** Text and Data Manipulation, Data tables, clipboard management, file operation, importing from and exporting to CSV/Excel file and data table.

Unit III: **Control of Controls:** Attach window activity, Finding the control, Waiting for a control, Act on Control- mouse and keyboard activity. Handling event driven controls as working with UiExplorer handling events. Introduction to Recorder, OCR, types of OCR and Screen Scrapping Using OCR. **Selectors:** Selectors, Defining and Assessing Selectors, Customization, Debugging, Dynamic Selectors, Partial Selectors, RPA Challenge.

Unit IV: **Application with Plugins and Extensions:** Java plugins, Citrix automation, Mail plugins, PDF plugins, Web integration, excel and word plugins. Extensions- Java, chrome, firefox, and Silverlight. **UiPath Advanced Automation concepts and techniques:** Image, Text and introduction of Citrix Automation; **Excel Data Tables & PDF:** Data Tables in RPA, Excel and Data Table basics, Data Manipulation in excel, Extracting Data from PDF, Extracting a single piece of data, Anchors. **Email Automation:** Incoming Email automation, Sending Email automation.

Unit V: **Debugging and Exception Handling:** Common exceptions and ways to tackle them, Strategies for solving issues, Catching errors **Capstone Project.**

### LAB

1. Setup, configuration, and introduction of components of UiPath Studio.
2. Execution of prebuilt examples of sequence, flow chart and state machines projects.

Create a sequence/Flow chart activity defining various types of variable as:

3. Generic Value Variables, Text Variables, Boolean Variables, Number Variables,
4. Array Variables, Date and Time Variables, Data Table Variables

Managing Arguments:

5. Create two activities, one activity defined with arguments and second activity which manages the argument to receive value from first activity.
6. Create an activity to manage importing active namespaces.

Create a project to Manage the control Flow:

7. The Assign Activity, The Delay Activity, The Do While Activity, The If Activity
8. The Switch Activity, The While Activity, The For-Each Activity, The Break Activity.

The Recording toolbar Activity:

9. Exercises using basic, web, and Desktop recoding.
10. Automate manual recording projects on Left-click on buttons, check boxes, drop-down lists, GUI elements, and Text typing

Data Scrapping:

11. Bot to extract structured data from your browser, application or document to a database, .csv file or even Excel spreadsheet.
12. Image and Text Automation
13. Excel Data Tables & PDF
14. Email Automation
15. Deployment of plugins and extensions.
16. Deploying and maintaining the BOT.

<b>Course Title and Code: Applied IoT (EE1117)</b>		
Hours per Week	<b>L-T-P: 0-0-4</b>	
Credits	<b>2</b>	
Students who can take	BCA Semester IV	
<b>Course Objective-</b> The course aims to develop understanding of Internet of Things concepts and also develop skills for working on IoT development boards to interface sensors and actuators. The course will enable the students to upload data from sensors on a web server and to use this data for analytical purposes or to actuate some transducers.		
<b>Course Outcome:</b> On successful completion of this course, the students should be able to:		
EE1117.1	Interface the Analog and Digital sensors to Node-MCU.	
EE1117.2	Develop Embedded C programs to read sensor data and upload to public cloud platform.	
EE1117.3	Use Python-based IDE (integrated development environments) for the interfacing of I/O devices with Raspberry Pi.	
EE1117.4	Visualize sensor data uploaded on public cloud.	
EE1117.5	Apply standard protocol(s) for implementation of IoT Systems.	
EE1117.6	Analyse and improve existing systems with innovative IoT based approaches.

<b>Hours per Week</b>	L-T-P: 2-0-4	
<b>Credits</b>	4	
<b>Students who can take</b>	BCA Sem VI	
<b>Course Objective:</b>		
This course introduces a broad spectrum of components that comprise virtualization and cloud computing. The student will learn about the technologies involved with these components and how they relate to each other to form a virtualization/cloud architecture based on well-known practices. This course builds upon the Operating System, Computer Networks, Database, Computer Architecture.		
<b>Course Outcomes:</b>		
On successful completion of this course, the students should be able to:		
CS1127.1	Create Virtual Machines (VM) using Hypervisors, install Kali Linux on the VM and demonstrate IaaS, PaaS and SaaS through real life examples	
CS1127.2	Build and deploy cloud applications that are resilient, elastic and cost-efficient	
CS1127.3	Analyse the trade-offs between deploying applications in the cloud and over the local infrastructure.	
CS1127.4	Deploy applications over commercial cloud computing infrastructures, i.e., Google Cloud	
CS1127.5	Analyse the performance, scalability, and availability of the underlying cloud technologies and software

### Course Topics

<b>Module(s)</b>	<b>Topics to be covered</b>
Identifying Self	Discovering Identities: Words That Describe Me, Your Personal Identity, A Portrait of Yourself, Personal Identity Wheel, Self-Awareness from five aspects that influence our identity - Personal Attributes, Value and Principles, Emotional Awareness, Tendencies and Habit, Needs Assessment.
	Personal Branding: Meaning, Importance and how to create and use it; Identify, Build and Market your brand story.
Persuasive Communication	Personal Brand Statement, Resume, Cover Letter and The Elevator Pitch, Presence in Group Discussion and Personal Interviews
	Online Brand Communications- Creating an online presence for professional branding on social media platforms (LinkedIn, Facebook, Instagram, etc)
	Writing a well-structured and effective business documents (Agenda, Minutes of the meetings (MoM) Emails, Executive Summary)

**Referred MOOCs –**

**Course Name- Introduction to Personal Branding**

Course duration - approx. 7 hours

Offered by University of Virginia

<https://www.coursera.org/learn/personal-branding>

**Course Name- Digital Footprint (If I Googled you, what would I find?)**

Course duration - approx. 9 hours

Offered by The University of Edinburgh

<https://www.coursera.org/learn/digital-footprint>

**COURSE NAME- HIGH IMPACT BUSINESS WRITING**

Course duration - approx. 7 hours

Offered by University of California, Irvine

<https://www.coursera.org/learn/business-writing>

<b>Course Title and Code: Cyber Security (EE1219)</b>		
Hours per Week	<b>L-T-P: 3-0-2</b>	
Credits	<b>4</b>	
Students who can take	B.C.A. IV semester, B. Tech VI semester	
<b>Course Objectives-</b> This course introduces the NIST Cybersecurity framework and sensitizes the students on security risks, malware and social engineering attacks. It builds skills for ensuring good cyber hygiene, monitoring and reporting cyber-attacks for an online computer.		
<b>Learning Outcome:</b> On successful completion of this course, the students should be able to: EE1219.1. Recommend the implementation tier for the NIST framework for a specific organization. EE1219.2 Detect malicious attempts in a network using network sniffers EE 1219.3 Analyze network and application attacks using SIEM. EE1219.4 Appreciate the significance of cyber forensics and carry stages of forensic investigation by taking memory backups, data recovery, analyzing registry, traffic logs etc. EE1219.5 Apply SQL injection, Cross-site script hacking, and other ethical hacking on virtual boxes and understand how hackers work. EE1219.6 Use automation tools for threat intelligence perception.		
<b>Prerequisites: Nil</b>		
<b>Evaluation Scheme</b>		
Sr. No	Specifications	Marks
1	Attendance	Nil
2	Assignment	05
3	Class Participation	Nil
4	Quiz	15
5	Theory Exam-I	Nil
6	Theory Exam-II	10
7	Theory Exam-III	30
8	Report-I	Nil
9	Report-II	Nil
10	Report-III	Nil
11	Project-I (Scenario on Network Security)	10
12	Project-II (Scenario on Forensic)	10
13	Project-III (Scenario on Ethical Hacking)	10
14	Lab Evaluation-I	Nil
15	Lab Evaluation-II	Nil
16	Course Portfolio	Nil
17	Presentation	Nil
18	Viva	10
	Total (100)	100

**Retest**

1	Theory Exam III	30
	Scenario (any one)	10
	Total	40

**Course Contents:**

**Module 1: Introduction** to NIST framework, Organization functions, CyberSeek, Types of Cyber Attacks, Vulnerabilities, Risks and Exploits, Overview of zero trust.

**Network and Application Security**- Intrusion Detection systems (IDS), Intrusion Prevention systems (IPS), Security Information and Event Management (SIEM) log analysis- using Splunk, Snort, Demilitarized zones (DMZ), Honeyd, Honeypots in network. Monitoring cyberattacks using SIEM for DOS, SQLi, XSS, XXE, LFI, Command Injection, identifying False Positive and False Negatives in SIEM logs. **Authentication Protocols** -Lightweight Directory Access Protocol, Kerberos, New Technology LAN manager (NTLM), Active Directory Domain Service (AD DS).

**Module 2- Forensic** - Introduction, Benefits and Challenges of Digital Forensic, Methodology, setting up Forensic workstation, NIST catalog for searching forensic tools and techniques, Computer, Registry, Mobile forensic tools, difference between Digital and Electronic Forensic, Hands-on using tools-Autopsy, Scalpel and Binwalk for data carving, extracting Botnet from memory, RAM triage., Network Miner and Wireshark for traffic analysis, Registry acquisition using FTK Imager, Shellbag explorer ,Registry viewer. Anti-forensic methods, Steganography tools- Openstego.

**Module 3: Ethical Hacking** -White hat hackers, Big bounty programs, familiarization with Common Vulnerabilities and Exploits (CVE), Nmap to locate attack vectors, Metasploit framework, Burp Suite for automated scanning. **Threat Intelligence** -Attackers vs Defenders, TI cycle, Online Anonymity, Trend analysis-Webscapper, Elastic search, Monitoring and alerting.

**Text Books:**

1. Introduction to Cybersecurity: Guide to World of Cybersecurity-Anand Shinde, Notionpress, India
2. Cryptography and Network security-Atul Kahate, Second Edition, Tata Mc Graw Hill.
