Batch: 2024-25

Institute of Management

IQAC Documentation

Document Name: Curriculum Structure and Syllabus Handbook, Ph.D (Programme Code: 2301) - Batch 2024-25

Document Creation Date: 31st July, 2024

Document Description: This document is prepared by the Institute of Management (IM), JKLU to serve as an information baseline for further planning and delivery of courses w.r.t Ph.D Programme, Batch 2024-25. It includes the Curriculum Structure, and collation of Semester-wise Course Outlines, prepared by respective faculty members.

Document Creation Team:

Mr. Dinesh Gupta

Ms. Payal Kedia

Dr. Punam Mishra

Quality Checked by:

Dr. Umesh Gupta

Approved by:

Dr. Ashwini Sharma

CONTENTS

Basic Rules and Regulations	4
Index of Course Structure	5
Index of Course Outlines	6

Basic Rules and Regulations

1. Credit Requirement in Pre-PhD Course Work:

S. No.	Qualifying Examination	Credits
1.	M. Phil, M. Tech	9
2.	MBA, M. Sc., MCA, M. Com	12
3.	B. Tech	32

2. Research Methodology, Research and Publication Ethics, Academic Writing, Credit-2 each course, would be compulsory courses for Pre-PhD Course work. Remaining credits can be earned through elective courses and/or MOOC courses offered by different departments/institutes.
3. Minimum CGPA requirement for passing Pre-PhD Course work is 6.
4. Minimum duration of the PhD Programme would be 3 years and one can complete PhD work within 6 years (including coursework as per UGC Norms).

Curriculum Structure- Ph.D (Batch:2024-25)

CORE AND MANDATORY COURSES

Course code	Course Title	Teaching Scheme				
		L	T	P	S	Credits
IL2101	Research Methodology	2	0	0	0	2
Target Students: PhD Scholars.						
Course Objectives: This course aims to familiarize the PhD students with basic elements of research thinking.						
Learning Outcomes: On successful completion of this course, the students should be able to: 1. critically analyze the strengths and weaknesses of one’s own and other’s intellectualwork and also write a literature review on a topic. 2. identify, describe, and critique the methods used for research in engineering, management, and development. 3. define research problems from a coherent analysis of gaps in existing knowledge base. 4. formulate hypotheses and/or research questions 5. write research proposals describing research questions, purpose, context, metrics, sources and methodology. 6. undertake research work making systematic use of investigation or experimentation, to discover or revise knowledge of reality.						
Assessment Scheme:						
Sr. No.	Evaluation Component	Marks				
1	Assignment	40				
2	Project	40				
3	Quiz	20				
	Total	100				
Course Syllabi: 1. Ways of Knowing 2. Nature of Science and Philosophy 3. Research Competencies 4. Reasoning and Critical Thinking for Researchers 5. Fallacies and Common Errors in Analysis 6. Literature Review 7. Nature of Theoretical and Empirical World 8. Research Approaches, process, and goal 9. Types of Research: Basic Research, Applied Research, Empirical Research 10. Characteristics of Good Research 11. Types of Research Results 12. Framing Research Proposal 13. Pitfalls in Research Proposals 14. Ethical Issues in Research 15. Data Collection						

16. Sources of Evidence

8. Many more references will be provided during the courses.

Course code	Course Title	Teaching Scheme				
		L	T	P	S	Credits
IL2103	Academic Writing	2	0	0	0	2
Target Students: PhD Scholars.						
Course Objective: This course is designed to enhance the academic writing skills of Ph.D. students, focusing on key writing strategies necessary for successful academic communication. The course will provide in-depth coverage of writing structures, academic conventions, argumentation, clarity, and revision strategies, allowing students to effectively communicate their research in dissertations, articles, and presentations. Through targeted exercises and feedback, students will develop the skills necessary for high-quality academic writing in their respective fields.						
Learning Outcomes: On successful completion of this course, participants should be able to: 1) Write clearly and concisely, demonstrating a coherent and logical structure in their academic writing. 2) Develop and present arguments effectively while synthesizing existing literature and research. 3) Employ strategies for revising drafts to improve coherence, style, and academic tone. 4) Use appropriate citation styles and adhere to ethical standards in academic writing, including avoiding plagiarism. 5) Engage with peer feedback constructively and refine their work based on critical reviews. 6) Write key sections of their dissertations or research papers with attention to scholarly conventions.						
Assessment Scheme: 1. Writing Assignments (60%) ○ Students will submit ten short writing assignments during the course. These assignments will be assessed based on clarity, structure, argumentation, and adherence to academic conventions. 2. Final Project (30%) ○ The final assignment is a piece of writing criticizing journal article(s) that incorporates the skills learned during the course. Students will be assessed on structure, argumentation, clarity, and appropriate use of academic conventions. 3. Class Participation (10%) ○ Active participation in class discussions, feedback sessions, and activities will be monitored throughout the course.						
Course Syllabus						

Session 1: Introduction to Academic Writing (2 hours)

- Overview of the course and expectations
- Introduction to the writing process: planning, drafting, and revising
- Understanding the purpose and structure of academic writing
- Writing for scholarly audiences: tone, style, and purpose

Session 2: Crafting Clear and Effective Academic Prose (2 hours)

- Sentence-level clarity: avoiding wordiness and jargon
- Maintaining a formal and objective tone
- Active vs. passive voice and its usage in academic writing
- Developing precise and concise writing

Session 3: Structuring an Argument (3 hours)

- Building a clear research question or thesis statement
- Developing logical and coherent arguments
- Structuring paragraphs for flow and coherence
- Organizing research findings and evidence effectively

Session 4: Writing the Literature Review (2 hours)

- Purpose and function of the literature review
- Synthesizing sources and highlighting gaps in research
- Organizing the literature review (thematic, chronological, methodological)
- Writing critical, rather than descriptive, reviews

Session 5: Writing the Introduction and Conclusion (2 hours)

- Crafting an engaging introduction that outlines research aims and questions
- Writing clear and concise conclusions that summarize findings and suggest further research
- Connecting the introduction and conclusion to the overall research narrative

Session 6: Research Methodology and Data Presentation (2 hours)

- Writing about research design and methodology
- Presenting data clearly and logically
- Explaining qualitative and quantitative research methods effectively

- Writing results and interpretation in academic style

Session 7: Revising and Editing for Clarity and Style (3 hours)

- Self-revision techniques: improving clarity, coherence, and flow
- Peer review practice: how to give and receive constructive feedback
- Editing for grammar, punctuation, and academic tone
- Common writing errors and how to avoid them

Session 8: Citation, Plagiarism, and Academic Integrity (2 hours)

- Overview of citation styles (APA, MLA, Chicago, etc.)
- How to properly cite and reference sources
- Understanding plagiarism and how to avoid it
- Ethical considerations in academic writing

Session 9: Writing for Publication (2 hours)

- Tailoring writing for academic journals and conferences
- Writing abstracts, cover letters, and preparing manuscripts for submission
- Responding to reviewer feedback and revising for publication
- Common pitfalls in academic writing and how to overcome them

Session 10: Final Writing Exercise and Review (2 hours)

- Students present drafts of a section of their dissertation, article, or paper
- Peer feedback session
- Instructor feedback and strategies for further improvement
- Course summary and strategies for continued writing development

Course code	Course Title	Teaching Scheme				
		L	T	P	S	Credits
IL2109	Research and Publication Ethics	2	0	0	0	2

At the end of this course, the learner is expected to:

Student Outcomes

1. To understand the philosophy of science and ethics, research integrity and publication ethics. To identify research misconduct and predatory publications.
2. At the end of the course the student will have awareness about the publication ethics and publication misconducts.
3. To understand indexing and citation databases, open access publications, research metrics (citations, h-index, impact Factor, etc.). To understand the usage of plagiarism tools.

Outline:

Unit I: PHILOSOPHY AND ETHICS (3 Hrs.)

Introduction to philosophy: definition, nature and scope, concept, branches - Ethics: definition, moral philosophy, nature of moral judgements and reactions.

Unit II: SCIENTIFIC CONDUCT (5 Hrs.)

Ethics with respect to science and research - Intellectual honesty and research integrity - Scientific misconducts: Falsification, Fabrication and Plagiarism (FFP) - Redundant Publications: duplicate and overlapping publications, salami slicing - Selective reporting and misrepresentation of data.

Unit III: PUBLICATION ETHICS (7 hrs)

Publication ethics: definition, introduction and importance - Best practices / standards setting initiatives and guidelines: COPE, WAME, etc. - Conflicts of interest - Publication misconduct: definition, concept, problems that lead to unethical behaviour and vice versa, types - Violation of publication ethics, authorship and contributor ship - Identification of publication misconduct, complaints and appeals - Predatory publisher and journals.

Unit IV: OPEN ACCESS PUBLISHING (4 Hrs.)

Open access publications and initiatives - SHERPA/RoMEO online resource to check publisher copyright & self-archiving policies - Software tool to identify predatory publications developed by SPPU - Journal finger / journal suggestion tools viz. JANE, Elsevier Journal Finder, Springer, Journal Suggester, etc.

Unit V: PUBLICATION MISCONDUCT (4Hrs.)

Group Discussion (2 Hrs.) : a) Subject specific ethical issues, FFP, authorship b) Conflicts of interest c) Complaints and appeals: examples and fraud from India and abroad
Software tools (2 Hrs.) : Use of plagiarism software like Turnitin, Urkund and other open source software tools.

Unit VI: DATABASES AND RESEARCH METRICS (7Hrs.)

Databases (4 Hrs): Indexing databases, Citation databases: Web of Science, Scopus, etc.

Research Metrics (3 Hrs.): Impact Factor of journal as per Journal Citations Report, SNIP, SJR, IPP, Cite Score - Metrics: h-index, g index, i10 Index, altmetrics.

****Units 1,2 and 3 are to be covered via Theory mode and Units 4,5 and 6 are to be covered via practice mode***

ELECTIVES IN MANAGEMENT

Course Title and Code: Organization Behaviour, BS2121

Hours per Week: 3

Credits: 3

Course Description:

The course is designed to help the students to understand that organizational effectiveness is more than the sum of the individual and group effectiveness. Through synergistic effects, organizations obtain higher levels of effectiveness than sum of their parts. Managerial process is inherently a human process-people relating to people which establishes the importance of understanding human behaviour in the workplace. The focus of this course is on the characteristics common to all organizations: the behaviour of individuals, groups and the processes that give viability to organizations

Learning Outcomes:

On completion of the course the students will have the ability to

1. Analyze individual and group behaviour, and understand the implications of organizational behaviour on the process of management.
2. Evaluate the appropriateness of various leadership styles and conflict management strategies used in organizations.
3. Demonstrate a thorough knowledge and understanding of organizational behaviour. Collaboratively and autonomously research, analyze and evaluate information from a wide variety of sources.
4. Apply relevant contemporary theories, concepts and models in order to analyse organisational environments, cases and issues.

Course Content:

1. Introduction to Organizational Behavior
2. Globalization, Diversity and Ethics
3. Personality and Perception
4. Motivation and its application
5. Positive Organizational Behavior and Psychological Capital
6. Dynamics of Group behavior: Groups and Teams
7. Transactional Analysis
8. Leadership, Power and Politics
9. Organizational Culture
10. Change Management.

Suggested Readings

1. Don Hellriegel and John W. Slocum, Jr. (2004). **Organizational Behavior**. India: Thompson
2. James L. Gibson. John M. Ivancevich (2006) **Organizations**. Singapore: McGraw- Hill
3. Jerald Greenberg and Robert A. Baron (2008). **Behavior in Organizations**. New Delhi: Pearson Prentice Hall
4. Luthans, Fred (2011). **Organizational Behaviour: Evidence- Based Approach**. Singapore: McGraw Hill.
5. Stephen P. Robbins & Timothy Judge (2010). **Essentials of Human Behavior**. New Delhi: Pearson Education

Minor Project	20%
Theory Exam	40%
Grand Total:	100%

Course Title and Code: Strategic Human Resource Management, BS2122

Hours per Week: 3

Credits: 3

Course Description:

The course aims at developing an understanding of how the human resource management function can become a strategic partner in organization and business management. It would help to learn to define the deliverables of a strategically aligned human resource function in organizations and give an exposure to research in the field of strategic human resource management practices. The course is divided into three modules.

Learning Outcomes:

By the end of this module you will be able to:

1. Explain the purpose of strategic planning in an organisation
2. Demonstrate the ability to explain the importance of people in the achievement of strategic change
3. Understand the key areas of human behaviour in sustained organisational performance.
4. Consider the changing nature of human resource management (e.g. outsourcing, issues around the future of nature of work)

Course Content:

1. Course Introduction
2. Strategy and Human Resource Management.
3. Organization Environments, Organizational Effectiveness
4. Building Organizational Capability through People.
5. Strategic Performance Management.
6. Strategic Compensation Designs.
7. Employee Relationship Management.
8. HR Systems and Organization Performance.
9. Human Resource Strategy for a Competitive Advantage,

Suggested Readings:

1. Tanuja,A.,(2013), Strategic Human Resource Management, Oxford University Press, New Delhi.
2. Armstrong Michael and Baron Angel (2005), Handbook of Strategic Human Resource Management : The Key to Improved Business Performance, Mumbai: Jaico Publishing House

Course Title and Code: Consumer Behaviour for Research, MA2121

Hours per Week: 3

Credits: 3

Course Description:

Consumer behavior is one of the most interesting and important aspects of marketing management. Virtually all decisions involved in developing an effective marketing mix for a product or service rely on thorough knowledge of the consumers who comprise the target market. Understanding the behavior of the consumer can help marketers anticipate reactions to changes in the marketing mix, or determine whether new products are likely to be adopted. Consumer behavior is also closely related to marketing research. A practical understanding of the consumer can aid in the selection of an appropriate research methodology, question design and selection, as well as in interpreting consumer responses to such questions. In this course we will directly examine the available theory and research concerning the behavior of the consumer in order to understand its most basic principle

Learning Outcomes:

Upon completion of the course, scholars are expected to be able to:

- Appreciate the value of consumer behaviour in determining successful marketing strategies.
- Review recent conceptual, empirical, and methodological developments in research on consumer behaviour.
- Develop coherent framework for interpreting consumer reactions to marketing stimuli.
- Apply behavioural principles to analyze marketing problems and design marketing strategy.

Course Content:

1. Understanding Consumer and market segments
2. Consumer Motivation
3. Personality traits and Consumer Behaviour
4. Consumer perception
5. Theories of Consumer Learning
6. Consumer Attitude Formation and Change
7. Consumer Decision Making Process
8. Culture, Subcultures, Social Class, Reference Group and Family Influences
9. Personal Influences and Diffusion of Innovation

Suggested Readings:

1. Schiffman, L.G., Wisenblit, J., & Kumar, R. S. (2015). *Consumer Behavior*. New Delhi: Pearson Education.

Course Title and Code: Integrated Marketing Communication for Research, MA2122

Hours per Week: 3

Credits: 3

Course Description:

Communication is a key skill for anyone involved in any aspect of marketing, not to mention almost every other aspect of business. The average person thinks of marketing communications as advertisements. This popular, narrow conception of marketing is not surprising given that these are the most common marketing activities with which the average person has direct experience. The scope of this course, however, will reflect the full breadth of the integrated marketing communications discipline. This course is intended to provide an overview and some experience with the creation and analyses of promotional strategies. This course is designed to be valuable to students who desire to work specifically in the communications field, in a broader marketing role or pursue their doctoral in marketing management.

Learning Outcomes:

By the end of the course the student would be able to:

- Recognize the importance of integration and analytics in the marketing communication process
- Emphasize the stature and importance of IMC as it is practiced against a backdrop of ever-changing social, economic and competitive developments in local, regional, national and global markets
- Apply IMC principles and practices to develop a comprehensive IMC plan for a brand.
- Evaluate the methods marketers can use to evaluate the effectiveness of an IMC campaign.
- Introduce, practice and manage integrated marketing communication and analytics in their organizations.

Course Content:

1. Integrated Marketing Communications- Objectives, Components and Effectiveness of Communication Process.
2. Integrated Marketing Communication (IMC) Components (Promotion Mix), IMC Planning Process
3. Communication Objectives and Budgeting.
4. Advertising Management: Meaning, Nature and Scope of Advertising, Role of Advertising in Promotion Mix, Various Participants in IMC Process-Role of Advertising Agencies
5. Analysis of Consumer Behavior, Segmentation, Targeting and Positioning Strategies
6. Advertising Management: Meaning, Nature and Scope of Advertising, Role of Advertising in Promotion Mix, Various Participants in IMC Process-Role of Advertising Agencies
7. Analysis of Consumer Behavior, Segmentation, Targeting and Positioning Strategies
8. Message Strategies- Creative Strategy Planning, Development and Implementation
9. Media Strategies- Planning and Implementation, Evaluating Effectiveness of Advertising.
10. Ethical and Social Issues in Advertising; Role of Promotional Tools in Marketing Communication, Role of Support Media
11. Personal Selling, Direct and Interactive Marketing, Events and Experiences, Internet Marketing, Ethical, Social and Legal Issues in Marketing.

Course Title and Code: Financial Risk Management, FA2121

Hours per Week: 4

Credits: 4

Course Description:

Financial Risk Management is an elective course for PhD students of Finance area. It is designed to help students acquire expert-level knowledge of principles and practices of risk management in financial services. Topics covered in this course have both theoretical and practical significance because risk management is a central theme of financial management. An understanding of these concepts is essential for analyzing a wide range of topics. It is expected to be a pre-requisite for research work on problems of financial risk management.

Learning Outcomes:

After completion of the course, the student will be able to

1. Demonstrate expert-level knowledge of financial risk management
2. Design risk management strategies using financial derivatives
3. Describe the key issues and research problems in financial risk management

Course Content:

1. Uncertainty and risk
2. Value at risk
3. Approaches to risk management
4. Mechanics of derivatives markets
5. Futures: mechanics and risk management
6. Options: mechanics and risk management
7. Investment strategies
8. Swaps
9. Credit derivatives

Course Title and Code: Dynamics of Financial Planning, FA2122

Hours per Week: 3

Credits: 3

Course Description:

Financial Planning is process of framing objectives, policies, procedures, programs and budgets regarding the financial activities of a concern or a person. This ensures effective and adequate financial and investment policies. This course helps in developing an insight in the new age financial planning process both at organizational and personal finance level. Financial Planning helps in ensuring a reasonable balance between outflow and inflow of funds so that stability is maintained. It ensures that the suppliers of funds are easily investing in companies which exercise financial planning. Financial Planning helps in reducing the uncertainties which can be a hindrance to growth of the company or own funds. This helps in ensuring stability and profitability.

Learning Outcomes:

By the end of the course the student would be able to:

1. Recognize the importance of financial planning for business concern,
2. Understand various tools and techniques of financial planning at the corporate level, and
3. Evaluate the methods and applications in personal financial planning

Course Content:

1. Planning Process: Introduction to the Financial Planning Process, Life Cycle Planning, Personal Financial Statements and Budgeting, Emergency Fund Planning,
2. Credit and Debt Management, Buying vs. Leasing,
3. Financial Planning for Various Business Entities
4. Legal Environment of Financial Planning: Business Law, Function, Purpose and Regulation of Financial Institutions, Financial Services Industry Regulation Requirements,
5. Investments: Introduction to Fixed Income Securities, Formula Investing and Investment Strategies, Asset allocation and portfolio diversification, Efficient Market Theory (EMT),
6. Tax consequences of Sale of Assets, Tax compliance, Alternative Minimum Tax (AMT),
7. Personal Financial Planning: Retirement Planning and Employee Benefits
8. Estate Planning : Methods of property transfer at death, Estate planning documents, Gifting strategies, Gift taxation and compliance, Satisfying liquidity needs, Powers of appointment,
9. Behavioural Finance, Inflationary considerations on investment strategy.

Suggested Reading:

Course Title and Code: Service Operations Management for Research, OP2121

Hours per Week: 3

Credits: 3

Course Description:

This course explores the dimensions of successful service firms. Outstanding service organizations are managed differently than their "merely good" competitors. Actions are based on totally different assumptions about the way success is achieved. The results show not only in terms of conventional measures of performance but also in the enthusiasm of the employees and quality of customer satisfaction. Beginning with the service encounter, service managers must blend marketing, technology, people, and information to achieve a distinctive competitive advantage. This course will study service management from an integrated viewpoint with a focus on customer satisfaction. The study material will integrate operations, marketing, strategy, information technology and organizational issues from research perspective.

Learning outcomes:

On completion of course the students will be able to:

1. Understanding of various research designs and techniques involved in management & operations of service for organizations
2. Develop insight in the new age service operations processes both in manufacturing and service firms
3. Analyze challenges of service operations management, generated during effective service delivery and strategies
4. Critically review the published materials related to service operations management

Course Content:

1. Nature of Service
2. Service Strategy
3. Service delivery system
4. Supporting facility
5. Service encounter

6. Service location facility
7. Service quality
8. Managing queues
9. Productivity and quality improvement

Suggested Readings:

- Chun, H. L., Chu, C.W., & Yueh, H. L. (2008) Revisit service classification to construct a customer-oriented integrative service model, *International Journal of Service Industry Management*, 19 (5), 639 – 661.

Course Title and Code: Supply Chain Management, OP2211
Hours per Week: 3
Credits: 3

Course Description:

This course explores the interdisciplinary dimensions of supply chain management and strategic importance of good supply chain design, planning and operations in the economic development of a nation. Understanding how good supply chain management can be a competitive advantage, whereas weakness in supply chains at various levels can damage the performance of a firm and affect the economy. Within the strategic framework of SCM the course identifies facilities, inventory, transportation, information, sourcing and pricing as the key drivers of supply chain performance.

Learning Outcomes:

On completion of course the students will be able to:

1. Understand analytical & methodological tools essential for solving SCM issues
2. Analyze major issues, risks and interrelationship of them for better Supply chain performance
3. Evaluate various aspects of supply chain management & challenges generated during effective management of supply chains

Course content:

1. Introduction & Supply Chain Performance measures
2. Logistics Network Configuration
3. Inventory Management and Risk Pooling
4. The Value of Information
5. Supply Chain Integration
6. Shipment
7. International Issues in Supply Chain Management

Suggested Readings:

- || Stefan, S. (2013). A review of modeling approaches for sustainable supply chain management. *Decision Support Systems*, 54 (4), 1513–1520.
- || Matthew, A. W., & Stanley, E. F. (2013). Data Science, Predictive Analytics, and Big Data: A Revolution That Will Transform Supply Chain Design and Management. *Journal of Business Logistics*, 32(4), 77-84.

Course Title and Code: Economics for Business, EP2102

Hours per Week: 3

Credits: 3

Course Description:

Economics for Business provides a solid foundation for economic analysis and thinking. Concepts and models of the course apply to Finance, Marketing, Operations, Strategy, Human Resource Management, Politics, Public Policy, History, and many other fields, and form the basis for managerial decision making.

Learning Outcomes:

By the end of this course, students should be able to understand:

- Demand, Supply, Equilibrium, Pareto optimality
- Elasticity and its relationship with pricing and revenue
- Economics of production
- Economic costs for decisionmaking
- Different types of market structures (e.g., Perfect Competition, Monopoly, Duopoly)
- Basic models of Game Theory
- Pricing
- Market Failures
 - Public Goods
 - Externalities
 - Moral Hazard
 - Adverse Selection
- The role of government in correcting market failures. Of particular interest is the effect of taxes and government policies on markets.
- Applications of economic principles to policy questions

Course Content:

1. Gains from Trade
2. Supply, Demand and Equilibrium
3. Elasticity & its Applications
4. Supply, Demand and Government Policies
5. Costs
6. Perfect Competition
7. Monopoly
8. Pricing and market segmentation
9. Oligopoly

10. Market Failures

Course Title and Code: Foundation of Data Analysis, ID2111**Hours per Week: 3****Credits: 3**

Course Description:

Organizational decision-making in present times is increasingly becoming data-driven. Hence, it is essential for a management student to develop necessary skills in analyzing business data. A firm understanding of fundamental statistical concepts is a precondition for developing these skills. The present course is offered to help you in building a foundation for developing these skills. The course begins with an introductory module on key spreadsheet skills. It then introduces participants to the core concepts in probability theory and statistical inference. The course focuses on building a starter statistical toolbox with appreciation for both the utility and limitations of these techniques. The course on one hand makes you an informed consumer of statistical information and at the same time prepares you for further coursework in the fascinating area of analytics.

Learning Outcomes:

Upon successful completion, the student should be able to:

- Understand and appreciate the role of data analysis in business decisions.
- Use spreadsheet software to perform exploratory data analysis.
- Set up and work with discrete and continuous random variables.
- Know what expectation, variance and covariance mean and compute them.
- Understand binomial, poisson and normal distributions and their properties.
- Compute estimates of population from samples and assess their accuracy.
- Calculate sample size required for any desired level of precision in estimation.

Course Content:**Spreadsheet Essentials:**

1. Excel Environment
2. Formatting & Linking Worksheets
3. Formulas and Functions
4. Charting.

Statistical Methods and Techniques:

1. Data Description
2. Exploratory Data Analysis
3. Probability and Probability Distributions
4. Sampling and Sampling Distribution
5. Estimation

Suggested Readings:

Course Title and Code: Data Analysis for Decisions, ID2112

Hours per Week: 2

Credits: 2

Course Description:

Data-driven organizational decision-making requires a management student to develop necessary skills in analyzing business data. The present course is the second course in a two-course series (Pre-requisite: Foundation of Data Analysis) and builds upon the foundation skills developed during the previous course. The course starts with hypothesis testing and then progresses through various inferential statistical techniques, such as correlation and regression analysis, to help participants develop the necessary skills in applying statistical techniques in managerial decision-making situations.

Learning Outcomes:

Upon successful completion, the student should be able to:

- Formulate hypotheses and collect data for testing of hypotheses.
- Test hypotheses using various parametric and non-parametric statistical tests.
- Apply simple and multiple regression techniques to predict unknowns.

Course Content:

1. Hypotheses Testing
2. Chi-Square and ANOVA
3. Correlation and Covariance
4. Simple and Multiple Regression
5. Non-Parametric Tests

Suggested Readings:

- Levin, R.I., Rubin, D.S., Rastogi, S., & Siddiqui, M.H. (Latest Edition). *Statistics for Management*. Delhi: Pearson. [Text Book].
- Davis, G., & Pecar, B. (Latest Edition). *Business Statistics using Excel*. Delhi: Pearson.

Course Title and Code: Statistics for Research, ID2114**Hours per Week: 3****Credits: 3**

Course Description:

This course is designed to provide Ph.D. scholars in Management with a robust foundation in statistical techniques essential for research. It emphasizes both theoretical understanding and practical application of statistical tools to analyze, interpret, and present data effectively. By the end of the course, participants will have the skills to design experiments, validate hypotheses, and employ advanced statistical methodologies in their research endeavors.

Course Objectives:

- To equip Ph.D. scholars with advanced statistical tools and techniques for research.
- To develop a deep understanding of statistical methodologies applicable to management studies.
- To enhance the ability to analyze and interpret data for empirical research.

Learning Outcomes:

Upon successful completion of the course, a student is expected

- Demonstrate proficiency in selecting and applying appropriate statistical methods to analyze and interpret complex datasets in management research.
- Design and execute statistically sound research studies, including hypothesis formulation, sampling, and data analysis, to address management-related problems.
- Critically evaluate and communicate statistical findings through written reports and visual presentations, ensuring accuracy, clarity, and adherence to ethical standards in research.

Course Content:

- *Introduction to Statistics in Research:* Role of statistics in research methodology; Types of data: Quantitative, qualitative, cross-sectional, and time-series
- *Exploring Data:* Data and Visualization; Measures of central tendency and dispersion; Graphical representation of data; Skewness and kurtosis
- *Correlation and Regression:* Crosstabs and Scatterplots, Different types of correlation coefficients, Simple and multiple regression analysis, Assumptions of regression and diagnostic tests
- *Probability and Probability Distributions:* Concepts of probability: Basic rules and Bayes' theorem; Discrete and Continuous distributions: Binomial, Normal, t-distribution
- *Sampling and Estimation:* Sampling techniques and sample size determination; Central Limit Theorem; Point and interval estimation; Sampling Distribution; Confidence Intervals
- *Hypothesis Testing:* Types of Hypotheses, steps in hypothesis testing, Errors in testing; Parametric tests and non-parametric tests, Analysis of Variance

Course Title and Code: Mathematical Thinking, ID2180

Hours per Week: 2

Credits: 2

Course Description:

The purpose of this course is to explore mathematics as an idiom of thought. This idea goes further from understanding math as merely a technique, and explores the subject as an independent mode of inquiry. Students often believe they dislike mathematics by the time they come to college. Some students fear math. Some just loathe it. This course aims to bring mathematics to the students, as it philosophically is, not what it appears to be. In other words, the objective of the course is to develop sensitivity and appreciation towards logical reasoning which is manifested in looking at the world through numbers, frames, quantitative design and therefore develop interest in math-based subjects that student may want to engage in, later. That said, the course may not act as a prerequisite for other advanced courses relying on mathematics, but it definitely forms an introduction to mathematical thinking, to generate interest in it in the first place. It frames solid base of applying mathematics in everyday thinking.

The course will demonstrate how mathematics is the language of nature. Students will approach mathematics not only as a set of problems, but also as a natural as well as social phenomenon. The course will also approach mathematical inquiry as a means for exploring both the physical sciences and social sciences with examples ranging from genetics, computer science, linguistics, design, abstract reasoning, cartography, formal and informal logic. The course does not assume students to have had a background in mathematics, and therefore has a foundational promise, with swift possibilities to build advanced concepts over them.

Learning Outcomes:

Students, by the end of the course should be able to think and develop mental faculties with respect to the following frames of imagination:

- a. Inductive and deductive reasoning
- b. Building a mathematical formulation or a picture in head, about a non-mathematical problem
- c. Heightened sensitivity towards understanding logic
- d. Abstract thinking about infinitesimally small distances, and theorize on thought experiments
- e. Idea of randomness
- f. Create distorted representation of pictorial figures if asked
- g. Tricks to find the important idea amongst all the good and bad ideas bundled up together
- h. Basic mathematical literacy to understand some symbolic representation
- i. Ability to convert symbols into sentences and the other way round
- j. Question and critique on logic
- k. Sensitivity for proofs
- l. Perceive the foundational applications of AI, ML
- m. Appreciate the nondeterministic nature of this world, alongside powers of numerical precision

Course Content:

1. Mathematics in Nature
2. Logic
3. Number System and Set Theory
4. Graph Theory
5. Geometry
6. Fair Distribution
7. Introduction to philosophy of calculus
8. Index numbers

Course Title and Code: Cognition and Critical Thinking, CC2170

Hours per Week: 2

Credits: 2

Course Description:

The course aims to provide a macro level understanding of the principles critical thinking and improve cognitive behaviour in the context of sustainability.

Learning Outcomes:

On completion of the course the students will be able to

1. Understand the principles of sustainability and how they apply to business / life
2. Appreciate the elements of critical thinking and how they help in creative problem solving
3. Raising vital questions and importance of articulation to receive accurate data
- 4 Translate data into useful and well-reasoned information
5. Apply the elements of critical thinking to build more sustainable business and systems

Course Content:

- 1 Introduction to Sustainability: Three pillars of Sustainability. SDGs and how they apply to organisations and individuals. Importance of being sustainable in work and life.
2. Sustainability and Behaviour Change: Key elements of conservation psychology and behaviour change strategies as well as community engagement tools that are designed to produce results.
3. Measurement of change: Theory of Change, Logic model framework, essentials of measuring sustainability and social change. Difference between Outputs and Outcomes. How to question

Course Title and Code: Specialized Topics in HR, BS2221

Hours per Week: 2

Credits: 2

Course Description:

The course intends to immerse students into more specialized and trending topics in the area of HR. Organizations are continuously evolving in dynamic business environment and likewise people management is undergoing change to address the challenges of business. Delving deep into emerging topics in HR will strengthen the students' understanding about the changing landscape HR and help them identify area which require more investigative research in present times. The exposure to the emerging topics will also provide needed expertise and knowledge in the domain to peruse research. The students will be undergoing related MOOC courses to enrich the learning and fortify their foundation.

Learning Outcomes:

At the end of the course the students will be to:

- i. Develop deeper knowledge and expertise in HR
- ii. Analyze the relevance of specialized topics in changing landscape of business
- iii. Identify newer and relevant avenues of research

Course Content:

1. Employee engagement
2. Employee agility
3. Employer Branding
4. Diversity, equity and inclusion
5. Knowledge management
6. Alternative Workforce
7. Employee mental health and wellness
8. Workplace mindfulness
9. Digital transformation in HR
10. Ethics and Future of work
11. Sustainability and HR

Suggested readings:

Management/ Business Magazines, Journal, Research databases related to the specialized topics.

Course Title and Code: Specialized Topics in Marketing, MA2221

Hours per Week: 2

Credits: 2

Course Description:

Trending topics and contemporary understanding of evolution of the area of marketing is very important and of interest to researchers in Marketing. Organizations evolve marketing strategies, evolve newer tactics and commit newer resources into this effort of marketing in contemporary manner.

Course Objective:

This course will provide participants with:

1. A sound knowledge of the theoretical and conceptual genesis of contextual issues in marketing management
2. Exposure to various perspectives of emerging trends in the domains of marketing
3. Understanding nature of trends in research being undertaken in the field of marketing management.

Course Learning Outcomes:

By the end of the course the student should be able to:

1. Develop understanding of conceptual and theoretical evaluation of Marketing Management trend,
2. Develop better understanding of interconnectivity and interdependence of Marketing and Brand Management with other aspects of an enterprise and business.
3. Exposure to research themes issues in the field of Marketing Management (specifically emerging trends)

Course Content:

1. Business-to-Business Marketing
2. Product and Brand Management
3. Digital and Other Emerging Social Media Marketing trends
4. Place or Geography or Location Marketing
5. Brand Management
6. Retail Marketing Management
7. Sustainable Marketing

Course Description:

The course intends to immerse students into more specialized and trending topics in the area of Finance. Organizations are continuously evolving in dynamic business environment and likewise all functional areas of management are undergoing change to address the challenges of business. Finance is the key elements of business functions and this course will cover the emerging issues and new areas of practicing corporate finance. Delving deep into specialized topic in their functional will strengthen the students understanding in more specific area in their functional domain. and will provide needed expertise. The students will be undergoing related MOOC courses to enrich the learning and strengthen their foundation

Learning outcomes:

At the end of the course the students will be to:

- i. Develop deeper knowledge in the financial domain
- ii. Analyze the relevance of specialized topics in changing landscape of business
- iii. Identify newer and relevant avenues of research

Course Content:

1. Startups financing-Bootstrapping- Angel investing
2. Crowd Funding- Peer to peer lending
3. E-Banking Services in Digitalization Era, Digital Transformation of Banks, Smart Bank Strategies
4. Fintech innovations and financial market disruptions
5. Block chain
6. Cryptocurrency
7. Regulation of Cryptocurrencies Smart Contracts Initial Coin Offers Robo Advisors E-Aggregation
8. Sources and Stages of venture capital financing
9. Wealth Management with special focus on real estate like Estate planning, Reverse Mortgage, REIT, RERA
10. Behavioral biases and lack of rationality, Limits to arbitrage
11. Prospect theory, Loss Aversion, Psychology and Investor behavior

Suggested readings:

Management/ Business Magazines, Journal, Research databases related to the specialized topics.

Evaluation Scheme:

Assessment Criteria	Percentage
Quiz	20%
Assignments	20%
Minor Project presentations	30%
Theory exam	30%
Grand Total:	100%

Course Title and Code: Specialized Topics in Operations Management, OP2221

Hours per Week: 2

Credits: 2

Course Description:

Operations management (OM) is regarding how business activities are performed to achieve highest level of efficiency within an organization. It is concerned with an efficient transformation of materials and labor into goods and services and maximize the profit of an organization. This is a project-based course that will introduce Ph. D students with the trends in the operations management. The students will also be complementing their specialized topic in operations management by learning a relevant course from MOOC platform.

Learning Outcomes:

The course has following objectives:

1. To aware and develop in-depth knowledge in the specialized topic.
2. To understand the relevance of the specialized topic with the organizations in the real world.
3. To do research and write a manuscript.
4. Learn about novel philosophy/ technology and its relevance in the operations of the organizations.

Course content:

- 3-D printing/ IoT/ Big data/ AI in Operations Management
- Digital supply chains
- Circular economy
- Product-service systems
- Optimizing product lifecycle by alternative consumption
- Toyota production system/ Lean management

Suggested Readings:

There is no specific text-book required for the course. Reading material from the peer-reviewed published articles, business magazines, blogs and white papers. Links, notes and documents referred in the class will be shared with the students.

Reference Books:

➤ Heizer, J., Render, B., & Munson, C. (2017). Operations management. Pearson Education Limited.
Russell, R. S., & Taylor-Iii, B. W. (2008). Operations management along the supply chain. John Wiley & Sons.

Evaluation Scheme:

Assessment Criteria	Percentage
Presentation	40%
Minor Project	40%
Theory exam	20%
Grand Total:	100%

Note:

1. Students need to give monthly presentations on the specialized topic discussed with the mentor.
2. At the end of the course/ semester student will provide a submission-ready manuscript on the opted specialized topic.
3. The exam will be from the MOOC course opted by the student and the specialized topic he/she has opted for.

Course Title and Code: Specialized Topic in Entrepreneurship, ED2221

Hours per Week: 2

Credits: 2

Course Description:

This course imparts essential knowledge into the field of entrepreneurship research. This course will introduce various approaches and methods of research in entrepreneurship and develop an awareness of the state of entrepreneurship, its emerging trends across the globe among the students. It will strengthen the students understanding about the need for education and research in entrepreneurship.

Learning outcomes:

At the end of the course the students will able to:

- i. Develop knowledge about recent research and educational efforts in entrepreneurship
- ii. Experience the entrepreneurial phenomenon as practice
- iii. Understand the emerging trends in the area of entrepreneurship

Course Content:

1. Entrepreneurship Education and Research
2. Innovation and Entrepreneurship
3. Sustainability, Climate Change and Entrepreneurship
4. The nature of entrepreneurial opportunities
5. Practicing entrepreneurship
6. Entrepreneurial decision making
7. Modeling entrepreneurship phenomena: individual and organizational levels
8. Transgenerational entrepreneurship
9. Entrepreneurial Finance

Suggested readings:

Articles from reputed Journals, Various Links to entrepreneurship websites/ organizations, Reports, Research databases related to entrepreneurship.

Evaluation Scheme:

Assessment Criteria	Percentage
Presentation	20%
Quiz	10%
Assignments/Seminar	20%
Minor Project	20%
Theory exam	30%
Grand Total:	100%

Course Title and Code: Term Paper, PW2221

Hours per Week: 2

Credits: 2

Course Description:

The students are required to develop a term paper after extensively reading published research papers on specific topic. The course will provide needed guidance into developing a research papers and develop deeper understanding of topic. It will orient and prepare students to develop a topic into research proposal and will provide hands-on into research writing.

Learning outcomes:

On completion of the course the students will be able to

1. Develop skill of research writing
2. Demonstrate maintain the logical flow of ideas and thought
3. Evaluate and identify the practical applicability of research in solving real life problem.

Course content:

Developing a term paper on the topic of interest applying the learnings drawn from other courses

Suggested Reading:

Will be provided by the instructor depending upon the area of interest and topic of research

Evaluation Scheme:

Assessment Criteria	Percentage
Assignments	40
Presentation	20
Project	40
Grand Total:	100%

Course code	Course Title	Teaching Scheme				
		L	T	P	S	Credits
IL2101	Financial Management for Managers	3	3	0	0	3
Target Students: PhD Scholars						
Course Objectives: - To provide an understanding of financial management principles and their applications in business decision-making. - To develop the ability to analyze and evaluate investment, financing, and dividend decisions. - To equip learners with tools and techniques for financial planning, capital budgeting, and risk assessment. - To enhance decision-making skills for value maximization of firms through financial strategies.						
Learning Outcomes: On successful completion of this course, the students should be able to: - Understand financial management principles, financial decision-making, and value maximization. - Analyze financial statements and interpret financial performance. - Apply financial planning and forecasting tools for business decisions. - Evaluate investment opportunities using capital budgeting techniques. - Assess risk-return trade-offs and cost of capital in decision-making. - Understand capital structure theories and their impact on financial decisions. - Formulate dividend policies considering financial and legal aspects.						
Assessment Scheme: Through NPTEL						
Course Syllabi: Introduction to Financial Management – Fundamental principles, financial decisions in firms, and the role of financial managers.						

- **Risk and Return Analysis** – Risk-return trade-off, financial statement analysis, and financial planning tools.
- **Time Value of Money** – Present and future value concepts, annuities, and perpetuities.
- **Capital Budgeting Decisions** – Investment criteria, NPV, IRR, Payback Period, and ARR methods.
- **Project Cash Flow Estimation** – Tools & techniques for estimating project cash flows and investment appraisal.
- **Risk Analysis in Investment Decisions** – Break-even analysis, project selection under risk, and risk management models.
- **Cost of Capital** – Determining cost of debt, preference capital, equity, WACC, and marginal cost of capital.
- **Capital Structure Decisions** – Theories including Net Income Approach, Net Operating Income Approach, Traditional Proposition, and MM Proposition.
- **Dividend Decisions** – Relevance of dividends, policy formulation, legal and procedural aspects of dividends.

Course Title and Code: Specialized Topics in Information Systems, ID2202

Hours per Week: 3

Course Credits: 3 (L-T-P: 3-0-0)

COURSE DESCRIPTION

The course is designed to equip Ph.D. students with the foundational and advanced knowledge necessary to conduct high-quality research in Information Systems (IS). It provides an in-depth exploration of research paradigms, methodologies, and contemporary issues in Information Systems (IS). It equips doctoral students with the theoretical and methodological foundations necessary to conduct rigorous IS research. Topics include the philosophy of science in IS, research methods (quantitative, qualitative, and mixed methods), design science and emerging trends.

COURSE OBJECTIVES

By the end of the course, students should be able to:

- Understand key philosophical perspectives and theoretical foundations in IS research.
- Evaluate and apply various research methodologies in IS.
- Critically analyze and review IS literature.
- Develop a research proposal aligned with IS research traditions.

TOPICS TO BE COVERED

- Introduction to Information Systems and IS Research
- Research Paradigms in IS Research
- Theoretical Foundations in IS Research
- Design Science and Mixed Methods in IS Research
- Emerging Trends and Ethical Considerations in IS

ASSESSMENT SCHEME

Component	Weight
Assignments	40%
Presentations	40%
Class Participation	20%
